Calculating Match for Your CVS Application:

- OVP requires applicants to provide 25% match when applying for CVS funds.

- To calculate the total match required, you should follow the following formula:
    - *Total Amount Requested* divided by 3 = *Total Matching Funds Required for Application Purposes* (cash, in-kind or combination)
    - **Example:** $75,000/3 = $25,000

- If you think of your project and the total amount of money you will need to fully carry out your project, then match is part of that money (or in-kind service) that is essential to reaching 100% of what your project needs.
    - *Total Amount Requested* plus *Required Match* = *Total Project Costs*
    - **Example:** $75,000 + $25,000 = $100,000
