Directly post-program, and at 3 years post-program follow-up, none of the

participants had initiated alcohol or drug use, bullying conduct, or suicide attempt or completion. There were no gender differences.

- The breathtaking use of the human brain also provides parents and their children an unforgettable life and educational experience about peer pressure, and the importance of practicing healthy brain behaviors. The cooperative learning curriculum content and strategies are based on educational trials and comprehensive review of the professional literature.
