Appendix V: Lifetime Supervision Criteria 313

Introduction

In 2011 the legislature declared that, “to protect the public and to work toward the elimination of sexual offenses, it is necessary to comprehensively evaluate, identify, treat, manage, and monitor adult sex offenders who are subject to the supervision of the criminal justice system and juveniles who have committed sexual offenses who are subject to the supervision of the juvenile justice system. Therefore, the general assembly declares that it is necessary to create a program that establishes evidence-based standards for the evaluation, identification, treatment, management, and monitoring of adult sex offenders and juveniles who have committed sexual offenses at each stage of the criminal or juvenile justice system to prevent offenders from reoffending and enhance the protection of victims and potential victims. The general assembly does not intend to imply that all offenders can or will positively respond to treatment (§16-11.7-101).” In 1992, the Colorado General Assembly passed legislation¹ that created a Sex Offender Treatment Board to develop standards and guidelines for the assessment, evaluation, treatment and behavioral monitoring of sex offenders. The General Assembly changed the name to the Sex Offender Management Board (SOMB) in 1998 to more accurately reflect the duties assigned to the SOMB. The *Standards and Guidelines for the Assessment, Evaluation, Treatment and Behavioral Monitoring of Adult Sex Offenders* (hereafter *Standards and Guidelines*) were originally drafted by the SOMB over a period of two years and were first published in January 1996. The *Standards and Guidelines* were revised in 1998, 1999, 2004, 2008 and 2011 for two reasons: To address omissions in the original *Standards and Guidelines* that were identified during implementation, and to keep the *Standards and Guidelines* current with the developing literature in the field of sex offender management.² The *Standards and Guidelines* apply to adult sexual offenders³ under the jurisdiction of the criminal justice system. Pursuant to statutory purview (§16-11.7-102), a guilty plea, *nolo contendere*, conviction by trial, deferred sentences, and stipulation/finding of sexual factual basis fall under this statute. There may be others in need of evaluation, treatment, and supervision who do not meet the definition of a sex offender or are not under the jurisdiction of the Colorado criminal justice system. The SOMB recognizes that the *Standards and Guidelines* can be utilized as guidance in these instances. For more information, please see Appendix x.

These Standards govern the practice of treatment providers, evaluators and polygraph examiners approved by the SOMB. Standards are mandatory and designated by “shall”, while guidelines are distinguished by the use of the term “should.” Although the SOMB does not have purview over other entities involved in the supervision of defendants convicted of a sexual offense (for example, probation, parole, and the judiciary), it offers these guidelines as a tool to assist in the management of offenders and to enhance collaboration⁴ among stakeholders and to provide guidance on best practices.

⁴ McGrath, R.J., Cumming, G.F., Burchard, B.L., Zeoli, S., & Ellerby, L. (2010). *Current Practices and Emerging Trends in Sexual Abuser*

The SOMB is required to maintain the *Standards and Guidelines* for the evaluation and treatment of criminal defendants with a current or past sex offense conviction.⁵ The evaluation shall make recommendations for the management, monitoring, and treatment of the defendant based upon his or her individual risk factors. Recommended interventions shall prioritize the physical and psychological safety of victims and potential victims, and meet the assessed needs of the particular defendant.⁶ The *Standards and Guidelines* apply to treatment provided both in the community and during imprisonment.⁷ Treatment providers shall be as flexible as possible and shall include a continuum of options which may include, but are not limited to, group counseling. To the extent possible, programs shall be accessible to all defendants, including those with mental illness and co-occurring disorders. The SOMB is required to revise the *Standards and Guidelines* based upon comprehensive research and analysis of evidence-based practices and the effectiveness of its policies and procedures.⁸ It is not the intention of the legislation, or the SOMB, that these standards and guidelines be applied to the treatment of juveniles who have sexually offended. Despite many similarities in the behavior and treatment of juveniles and adults, important differences exist in their developmental stages,⁹ the process of their offending behaviors,¹⁰ and the context for juveniles who must be addressed differently in their diagnosis and treatment. Please see the current publication of the *Standards and Guidelines for the Evaluation, Assessment, Treatment and Supervision of Juveniles Who Have Committed Sexual Offenses*.

In 1998, the Colorado General Assembly passed legislation directing the SOMB, in collaboration with the Department of Corrections, the Judicial Branch and the Parole Board, to also develop standards for community entities that provide supervision and treatment specifically designed for sex offenders who have developmental or intellectual disabilities.¹¹ At a minimum, the Legislature mandates that these standards shall determine whether an entity would provide adequate support and supervision to minimize any threat that the sex offender may pose to the community.¹² The treatment and management of sex offenders with developmental or intellectual disabilities (DD/ID) is a highly specialized field.¹³ The intent of the DD/ID *Standards and Guidelines* is to better address the specific needs presented by sex offenders with developmental or intellectual disabilities. They are based on best practices known today for managing and treating sex offenders with developmental or intellectual

disabilities. To the extent possible, the SOMB has based these Standards on current research in the field. Materials from knowledgeable professional organizations have also been used to direct the *Standards and Guidelines*. The *Standards and Guidelines* that are designated with the letters “DD/ID” after the Standard number are not intended to stand alone, but must be used in conjunction with the other *Standards and Guidelines for the Assessment, Evaluation, Treatment and Behavioral Monitoring of Adult Sex Offenders*.

Sex offender treatment and management is a developing specialized field.¹⁴ The Colorado Legislature has directed, in the SOMB’s enabling statute, that: “The board shall revise the guidelines and standards for evaluation, identification, and treatment, as appropriate, based upon the results of the board’s research and analysis.” The SOMB is committed to remaining current on the emerging literature and research and periodically modifying the *Standards and Guidelines* on the basis of new findings. The previous revisions to the *Standards and Guidelines* were undertaken with that goal in mind. The current revisions of the *Standards and Guidelines* are continuing evidence of this commitment. In 2013 the Colorado Legislature additionally appropriated funding for an independent external evaluation of the *Standards and Guidelines*. The results of this evaluation were published in January 2014.¹⁵ The current revision of the *Standards and Guidelines* has been partially based in response to the external evaluation and, in addition, on research and analysis conducted by the SOMB independent of the external evaluation. It is the commitment of the SOMB to incorporate best practices and evidence based practices for sex offender management in Colorado.

These Standards and Guidelines use a variety of terms referencing persons convicted as adults of a sexual offense.¹⁶ The terms that are frequently used in the Standards and Guidelines include sex offender, offender and client. Based on the guidance of the SOMB, the terms of reference utilized in different sections are determined by the SOMB committee convened to revise a particular section of these Standards and Guidelines. The SOMB committee decisions related to the terms of reference were influenced by the intervention focus of a given section (e.g., treatment, supervision, etc.), as well as the by professional stakeholders providing the intervention. The SOMB notes that the use of the term ‘sex offender’ is consistent with the statutory definition identifying a person convicted of a sexual offense. However, the SOMB wishes to convey that the use of the term is in no way intended to label individuals by their behavior, or suggest that an adult convicted of a sex offense who is participating in and benefiting from sex offense-specific treatment cannot live a sex offense free life-style.¹⁷

Guiding Principles

Purpose of the Guiding Principles is to establish the core foundation principles from which the *Standards and Guidelines* are created and to provide guidance in the absence of a specific standard or guideline.

1. The highest priority of these Standards and Guidelines is to maximize community safety¹⁸ through the effective delivery of quality evaluation, treatment and management of sex offenders.¹⁹
2. Sexual offenses are traumatic and can have a devastating impact on the victim and victim's family.

Sexual offenses violate victims, and can lead to common and serious consequences across all areas of victims' lives, including chronic and severe mental and physical health symptoms,²⁰ as well as social, family, economic, and spiritual harm.²¹ Research and clinical experience indicate that victims of sexual abuse often face long-term impact and continue to struggle for recovery over the course of their lifetime.²² The impact of sexual offenses on victims varies based on numerous factors. By defining the offending behavior and holding offenders accountable, victims may potentially experience protection, support and recovery.²³

Professionals working with sexual offenders should be alert to how offenders' behaviors may inflict further harm on persons they have previously victimized.²⁴

3. Community safety and the rights and interests of victims and their families, as well as potential victims, require paramount attention when developing and implementing assessment, treatment and management of sex offenders.
4. Offenders are capable of change.

Responsibility for change ultimately rests with the offender. Individuals are responsible for their attitudes and behaviors and are capable of eliminating abusive behavior through personal ownership of a change process. While responsibility for change is the offender's, the therapeutic alliance between the offender and the therapist is a predictive and important facet of responsivity leading to behavioral change.²⁵ A warm, direct, and empathic therapeutic approach contributes to an offender's motivation to change, as does the supervising officer's positive working alliance with the offender.²⁶

5. The treatment and management of sex offenders requires a coordinated response by the Community Supervision Team (CST) and will be most effective if SOMB providers and the entirety of the criminal justice and social services systems apply the same principles and work together.²⁷

Community safety is enhanced when treatment providers and community supervision professionals practice in their area of specialization and work together. This collaboration should include frequent and substantive communication about information that will assist in reducing an offender's risk to the community. When the CST members respect the individual roles and mutually agree upon their goals, the offender can be treated and managed more effectively.²⁸

6. Community supervision is an opportunity, the success of which is dependent upon a sexual offender's willingness and ability to cooperate with treatment and supervision, and be

²⁸ Alexander (2010); Palmiotto & MacNichol (2010).

accountable for their behaviors.²⁹ Accordingly, members of the Community Supervision Team should employ practices designed to maximize offender participation and accountability.³⁰

7. Treatment and supervision are most effective when they are individualized, and incorporate evidence-based and research informed practices.³¹
8. Risk for future sexual offending varies and may increase or decrease. The intensity and duration of treatment and supervision should respond to these variations in risk.³²

Individual assessment and evaluation of risk should be an ongoing practice. Treatment approaches and supervision plans should be modified accordingly. Effective management of risk balances the use of external controls with the development of individual protective factors and self-regulation in order to reduce risk, enhancing the offender's ability to live safely in the community.

9. Victims have the right to safety, to be informed and to provide input to the Community Supervision Team (CST).

Physical and psychological safety is a necessary condition for victims to begin recovery related to sexual abuse. Victims experience additional trauma when they are blamed or not believed, which may be more damaging than the abuse itself.³³ Victim impact is substantially reduced when victims are believed, protected and adequately supported.

The CST can assist the victim in this by providing information and affording the victim representation in the supervision and management of the offender. Victim input and

knowledge of the offender are valuable information for the supervision team.³⁴ Victims are empowered to determine their level of participation.

10. When a child is sexually abused within the family, the child's individual need for safety, protection, developmental growth and psychological well-being outweighs any conflicting parental or family interests.
11. The SOMB Standards and Guidelines are based on current and emerging research and best practices.³⁵

Treatment, management, and supervision decisions should be guided by empirical findings when research is available. Since there is limited and emerging empirical data specific to sexual offending, decisions should be made cautiously to minimize unintended consequences.

12. A continuum of treatment and management options for sex offenders should be available in each community in the state. Additionally, efforts should be made to maximize continuity of care whenever a transition from one treatment setting to another to maximize positive treatment progress.³⁶

It is in the best interest of public safety for each community to have a continuum of management and treatment options so that treatment is appropriately matched to the client.

13. Successful treatment and management of sex offenders is enhanced when the Community Supervision Team (CST) models and encourages family, friends, employers and other members of the community in pro-social support of the offender.³⁷

Families, friends, employers and members of the community who have influence in the lives of offenders can meaningfully contribute to their successful functioning in society. Family and friends should be included in the supportive network in a manner that is sensitive to the possible negative impact of the offense on them.³⁸

14. Information sharing among CST members is vital to public safety and offender success.

E., Maruna, S., & Thornton, D. (2015). An exploration of protective factors supporting desistance from sexual offending. *Sexual Abuse: A Journal of Research and Treatment*, 27(1), 16-33; Tharp, A. T., DeGue, S., Valle, L. A., Brookmeyer, K. A., Massetti, G. M., & Matjasko, J. L. (2013). A systematic qualitative review of risk and protective factors for sexual violence perpetration. *Trauma, Violence & Abuse*, 14(2), 133-67.

³⁸ Wilson, R., & McWhinnie, A. (2013). Putting the 'Community' back in community risk management of persons who have sexually abused. *International Journal of Behavioral Consultation and Therapy*, 83-4), 72-79.

Sexual offense-specific treatment is not conducted with the same degree of confidentiality as non-mandated treatment.³⁹ Sex offenders waive confidentiality with regard to therapeutic and/or public safety goals. When sensitive and private information is shared, the dignity and humanity of all involved must be respected.

15. Sex offense-specific assessment, evaluation, treatment, behavioral monitoring and supervision should be humane, non-discriminatory and bound by the rules of ethics and law.⁴⁰

(2013). *Legal and ethical aspects of sex offender treatment and management*, Chichester, K, John Wiley & Sons, Ltd.

Definitions

-
- Accountability:** Quality of being responsible for one’s conduct: being responsible for causes, motives, actions and outcomes.
- Adjudication:** The determination by the court that it has been proven beyond a reasonable doubt that the juvenile has committed a delinquent act or that a juvenile has pled guilty to committing a delinquent act.
- Adjunct Treatment:** An additional and often separately provided mental health or medical intervention distinct from sex offense-specific treatment which is designed to enhance the client’s overall wellness and functioning and thus the effectiveness of other required interventions. Examples include, but are not limited to, substance abuse treatment, care for depression or other mental illness, family therapy, and specialized trauma therapies.
- Approved Provider List:** The list, published by the SOMB, identifies the treatment providers, evaluators, and polygraph examiners who meet the criteria set forth in these Standards. The determination that the providers meet the criteria is made by the SOMB based on an application submitted by the provider, outlining their experience, training and credentials, a criminal history check and background investigation, written references and reference checks and a review of relevant program materials and products. Placement on the list must be renewed every three years.
- Approved Supervisor:** Approved Supervisors (AS) are adults who have been approved by the CST to supervise contact between a client and a specified minor, victim or vulnerable person. This person is an individual who has met the criteria described in 5.780 through 5.786 and has been approved by the CST.
- Approved Community Support Person:** Approved Community Support Person (ACSP) is a person who may support the offender in approved activities that do not involve contact for the purpose of interacting with a specific minor child(ren). This person is an individual who has met the criteria described in 5.790 through 5.793 and has been approved by the CST.
- Assessment:** An on-going process of evaluation which might include the use of standardized measurement instruments intended for treatment planning and review purposes.
- Authorized Representative:** A legal term describing a specific role with respect to a person receiving services as a result of an intellectual or developmental disability. An

“authorized representative” is a person designated by the person receiving services, or by the parent or guardian of the person receiving services, if appropriate, to assist the person receiving services in acquiring or utilizing services or supports. The extent of the authorized representative's involvement shall be determined upon designation.⁴¹

- Behavioral Monitoring:** The Teams Model promotes engagement of offenders by the CST in the treatment and supervision process to enhance protective factors, decrease risk and increase the offender's motivation for positive behavioral change. Each member of the CST has a role to play in this process through closely working together, assessing risk and identifying target behaviors that are directly related to specific criminogenic needs areas. As they do so they are monitoring the offender's progress and compliance with treatment and supervision and implementing appropriate incentives and sanctions when required. (See Section 5.050 Promoting and Monitoring Behavioral Change.)
- Case Management:** Coordination and implementation of supervising, treating and managing the behavior of individual sex offenders.
- Child Contact Screen:** The Child Contact Screen is a process conducted by an SOMB Approved Evaluator to assess the appropriateness of an offender's contact with their own minor non-victim child(ren). (See Section 5.730).
- Client:** A person who is in sex offense-specific treatment and is convicted or adjudicated of a sexual offense.
- Clinical Experience:** Those activities directly related to providing evaluation and/or treatment to individual sex offenders, e.g. face-to-face therapy, report writing, administration, scoring and interpretation of tests; participation on community supervision teams of the type described in these *Standards and Guidelines*; and clinical supervision of therapists treating clients convicted of a sexual offense.
- Clinical Indicators:** Clinical indicators can be anything that provides information about a client's overall clinical presentation, which may include but is not limited to interviews, quality of treatment participation, polygraph examination results and disclosures, scores on dynamic risk assessments, psychological evaluation, behavioral observations, and collateral reports.
- Cognitive Distortions:** Learned assumptions, sets of beliefs, and self-statements which serve to deny, justify, minimize, and rationalize behavior.⁴²

⁴¹ See C.R.S. § 25.5-10-202(1.3).

⁴² Nunes, K. L., Hermann, C. A., White, K., Petterson, C., & Bumby, K. (2018). Attitude may be everything, but is everything an attitude? Cognitive distortions may not be evaluations of rape. *Sexual Abuse*, 30(1), 43-62.

Colorado Sex Offender Management Board:

The Colorado Sex Offender Management Board is a type II Board established in 1992 by the Colorado General Assembly. For additional information see the Introduction Section.

Community Centered Board (CCB):

A state-designated entity⁴³ providing designated services to individuals with intellectual or developmental disabilities.

Community Supervision Team (CST):

A team of professionals including a minimum of the supervising officer, the treatment provider, the evaluator, victim representative and polygraph examiner who collaborate to make decisions about the offender. The Community Supervision Team may also include pro-social support persons such as family members, spiritual leaders and employers. (See Section 5.000 for additional information).

Competency:

The constitutional and statutory requirement that, through completion of a criminal sentence, a defendant not have a mental disability or developmental disability that prevents the defendant from having sufficient present ability to consult with the defendant's lawyer with a reasonable degree of rational understanding in order to assist in the defense or prevents the defendant from having a rational and factual understanding of the criminal proceedings, including any sentencing obligations.⁴⁴

Conviction:

A determination by the court that it has been proven beyond a reasonable doubt that the offender has committed a criminal act or that the offender has plead guilty to committing a criminal act.

Custodial Parent:

For the purposes of these *Standards and Guidelines*, primary residential custodian is the parent with whom the child resides with and who is exercising daily parenting responsibility for the child.

Defense Mechanisms:

Normal adaptive self-protective functions which keeps human beings from feeling overwhelmed and/or becoming psychotic, but which may become dysfunctional when overused or over-generalized.

Denial:

Denial is a psychological defense mechanism used to protect the ego from anxiety producing information. In addition to being a psychological defense mechanism, denial may also be a normal,⁴⁵conscious action to avoid internal or external consequences associated with the offense behavior. For the purpose of this section, denial is defined as the failure

⁴³ See C.R.S. § 25.5-10-209.

⁴⁴ See generally C.R.S. § 16-8.5-101, *et seq.*

⁴⁵ Mann, R. E., Hanson, R. K, & Thornton, D. (2010). Assessing risk for sexual recidivism: Some proposals on the nature of psychologically meaningful risk factors. *Sexual Abuse: A Journal of Research and Treatment*, 22(2), 191-217.; Yates, P. M. (2009). Is sexual offender denial related to sex offense risk and recidivism? A review and treatment implications. *Psychology, Crime, and Law*, 15(2-3), 183-199.

of a client to accept responsibility for the offense⁴⁶ on a continuum from low to moderate to high. There is conflicting research regarding denial as a risk factor for sexual re-offense.⁴⁷

Denier Intervention: This intervention occurs separately from sex offense-specific treatment and is designed primarily for those in Level 3 (High) denial. It occurs separately from regular group therapy that is provided for offenders who have, at a minimum, admitted the crime of conviction. Denier Intervention may include a variety of modalities specifically designed to reduce denial, minimization and resistance to treatment and supervision. (See Standards 3.560-through 5.780 for additional information.)

Department: The Colorado Department of Public Safety.

Developmental/Intellectual Disability: An intellectual or developmental disability that manifests before the person reaches age 22, that constitutes a substantial disability to the affected person, and that is attributable to an intellectual and developmental disability or related conditions, including Prader-Willi syndrome, cerebral palsy, epilepsy, autism, or other neurological conditions when the condition or conditions result in impairment of general intellectual functioning or adaptive behavior similar to that of a person with an intellectual and developmental disability. The federal definition of “developmental disability” found in 42 U.S.C. sec. 15001 et seq., does not apply.⁴⁸

Discussion: Some clients have intellectual and/or functional deficits that indicate a need for revised assessment, evaluation, treatment or behavioral monitoring even though they do not meet the definition for intellectual or developmental disability. Evaluators, treatment providers, polygraph examiners, and supervising officers shall provide services appropriate to each client’s developmental level.

Direct Clinical Contact: Includes intake, face-to-face psychotherapy, case/treatment staffing, treatment plan review, and crisis management with adult sex offenders.

Dynamic Risk Factors: Dynamic risk factors are defined as characteristics that are capable of change, and changes in these factors are associated with increased or

⁴⁶ Association for the Treatment of Sexual Abusers Practice Standards and Guidelines, 2001 (p. 63)

Assessing risk for sexual recidivism: some proposals on the nature of psychologically meaningful risk factors. *Sexual Abuse: A Journal of Research and Treatment*, 22(2), 191-217.; Nunes, K., Hanson, K., Firestone, P., Moulden, H., Greenberg, D. & Bradford, J. (2007). Denial predicts recidivism for some sexual offenders. *Sex Abuse*, 91-105.

⁴⁸ § 25.5-10-202(26), C.R.S.

decreased recidivism risk.⁴⁹ Dynamic factors are further described as either stable or acute. Stable dynamic risk factors are those with a tendency to be persistent characteristics (i.e. stable over time) that change over an extended period (e.g. cognitive distortions, deviant sexual arousal, intimacy deficits, social influences). Acute dynamic risk factors, conversely, are more fluctuating or rapidly changing, perhaps daily or hourly (e.g. sexual preoccupations, victim access, hostility, emotional collapse, substance abuse).

- Empathy:** Empathy is the capacity to understand or feel what another person is experiencing within their frame of reference.
- Evaluator:** An individual listed as an approved evaluator with the SOMB who conducts sex offense-specific evaluations of adults who are convicted of a sexual offense pursuant to professional standards and these *Standards and Guidelines*.
- Evidence-Based Practices:** The integration of the best available research with clinical expertise in the context of client characteristics, culture and preferences.⁵⁰
- Exclusionary Criteria:** Criteria established by the Colorado Sex Offender Management Board that precludes a client from having contact with a minor child. (See section 5.725.)
- Grooming:** A process in which a client gradually attempts to gain a person or persons' trust with the intent to perpetrate abuse.
- Guardian:** An individual at least 21 years of age who has qualified as a guardian of a minor or incapacitated person pursuant to appointment by a parent or by the court. The term includes a limited, emergency, and temporary substitute guardian but not a guardian ad litem.⁵¹
- Guideline:** For the purposes of this document, guidelines are established by the SOMB are mandatory and designated by "should" and serve to provide guidance on best practice.
- Incapacitated Person:** A person who lacks the ability to manage property and business affairs effectively by reason of mental illness, mental deficiency, physical illness or disability, chronic use of drugs, chronic intoxication, confinement, detention by a foreign power, disappearance, minority, or other disabling cause (refer to Section 15-1.5-102 (5), C.R.S.).

⁴⁹ Bonta, J. and Andrews, D.A. (2016). *The psychology of criminal conduct* (6th ed.). New York, NY: Routledge.

⁵⁰ American Psychological Association (n.d.). Evidence Based Practice in Psychology. Retrieved from <https://www.apa.org/practice/guidelines/evidence-based-statement>.

⁵¹ § 15-14-102(4), C.R.S.

Incidental Contact: Incidental Contact with minor children involves contact with children as a result of regular or routine CST approved community access (e.g. - grocery store, bank, movies, sporting events, etc.). In such circumstances, the offender is not initiating contact with children or developing relationships with children. The offender does write and obtain approved safety plans for how to minimize and avoid interactions with children. Incidental contact can become unapproved purposeful contact if the offender does not take steps to avoid any additional interaction with children in these circumstances.

Incompetent to Proceed (ITP): As a result of a mental disability or developmental disability, a defendant who does not have sufficient present ability to consult with the defendant's lawyer with a reasonable degree of rational understanding in order to assist in the defense, or a defendant who does not have a rational and factual understanding of the criminal proceedings at any time prior to completion of the sentence.⁵²

Informed Assent:⁵³ Assent is a declaration of willingness to do something in compliance with a request; acquiescence; agreement. The use of the term "assent" rather than "consent" in this document recognizes that clients are court ordered to participate in treatment and that their choices are therefore more limited.

Informed means that a person's assent is based on a full disclosure of the facts needed to make the decision intelligently, e.g. knowledge of risks involved, alternatives.

Informed Consent: Consent is a voluntary agreement, or approval to do something in compliance with a request.

Informed means that a person's consent is based on a full disclosure of the facts needed to make the decision intelligently, e.g. knowledge of risks involved, alternatives.

Minor Child/Children: A person under the age of 18 years.

Own Minor Child: An Own Minor Child is a person under the age of 18 with whom the offender has a parental role.

Parental Role: Parental Role is an established and on-going position of authority with routine primary caretaking responsibilities for a child(ren) not limited by legal, biological or marital status.

Penile Plethysmography

⁵² § 16-8.5-101(11), C.R.S.; *Jones v. District Court*, 617 P.2d 803, 807 (Colo. 1980).

⁵³ The purpose of defining "informed assent" and "informed consent" in this section is primarily to highlight the degree of voluntariness in the decisions which will be made by a sex offender. No attempt has been made to include full legal definitions of these terms.

- (PPG):** An assessment tool that employs the use of an electronic device for determining and registering variations in penile tumescence associated with sexual arousal. Plethysmography includes the interpretation of the data collected in this manner.
- Polygraph Examination:** The use of an instrument that is capable of recording, but not limited to recording, indicators of a person's respiratory pattern and changes therein, galvanic skin response and cardio-vascular pattern and changes therein. The recording of such instruments must be recorded visually, permanently and simultaneously. Polygraph examination includes the interpretation of the data collected in this manner, for the purpose of measuring physiological changes associated with deception.
- Positive Support Person:** A positive support person is a person who provides positive support for behavior change, who has verified disclosure and been approved by the CST. This can be a peer who has successfully progressed within sex offense-specific treatment and supervision. (See Section 5.500 Role of Family Members and Natural Supports within the Team).
- Potential Victim:** A person or persons who are at risk for abuse or manipulation by the sex offender, including vulnerable populations. This may include but is not limited to a person or persons who are similar to those whom the offender has a history of targeting. This may also include persons about whom the offender objectifies, fantasizes, or makes plans to harm. Animals may be considered potential victims.
- Pre-Sentence Investigation Report (PSIR):** A written report prepared by the probation department to provide the court with information to consider at sentencing. (See section 1.000 for additional information).
- Pro-Social Living Plan:** A Pro-Social Living Plan is a comprehensive strategy to solidifying client strengths, and mitigating risk with protective factors so that the client can successfully establish a pro-social lifestyle that is incompatible with offending behavior.
- Purposeful Contact:** Purposeful Contact refers to any form of interaction with a victim, child or vulnerable person when the offender initiates the interaction and fails to minimize or avoid the incidental contact. This contact includes, but is not limited to, the following:
1. Having physical contact, face to face, or any verbal or non-verbal contact;
 2. Being in a residence;
 3. Being in a vehicle;
 4. Participating in visitation of any kind;

5. Initiating correspondence through a third party including, but not limited to: written, electronic, telephone contact, voice messages, text messaging, e-mail, computer communication, correspondence through any social networking sites (including, by way of example, but not limited to Twitter, Facebook, Snapchat, and Instagram), or gifts;
6. This standard does not preclude conversations with a person about a child as long as that communication does not attempt to communicate with the child through that person.
7. Going to or loitering near places used primarily by minor children as defined by the CST; or
8. Entering the premises, traveling past or loitering near any of the victims' residences, schools, day cares, places of worship or places of employment.

In extremely rare circumstances, an offender may have purposeful contact with a minor child or vulnerable person (without prior approval) based on an eminent danger to the child or vulnerable person. The CST should consider the context for this unapproved purposeful contact in the decision making related to addressing the violation of the contact prohibition.

Risk Related Sexual Interest and Behavior Patterns:

Any sexual interest or behavior that is empirically linked to risk factors for sexual offending and abusive behavior as well as sexual interest(s) or behavior that impairs the individual's ability to function as a healthy, pro-social member of the community. Such factors include cognitive, emotional, or behavioral sexual patterns determined to be sexually abusive or sexually problematic. This may involve a disregard for negative consequences, the unmanaged need for instant gratification, a lack of impulse control, and/or results in disruption to other aspects of the client's life.

Risk Related sexual interest patterns may include, but are not limited to, the following:

- o Sexual interest in prepubescent and pubescent children
- o Sexualized violence
- o A presentation of multiple/specific paraphilia's

Risk Related sexual behavior patterns may include, but are not limited to, the following:

- o Disregard for the negative consequences caused by sexual behaviors and interest
- o Sexual preoccupation
- o Hypersexuality

- o Sexual compulsivity
- o Sexual coping

Risk-Need-Responsivity

Principle:

The Risk Need Responsivity (RNR) model indicates that the comprehensiveness, intensity and duration of treatment provided to individual clients should be proportionate to the degree of risk that they present (the Risk principle), that treatment should be appropriately targeted at participant characteristics which contribute to their risk (the Need principle), and that treatment should delivered in a way that facilitates meaningful participation and learning (the Responsivity Principle).⁵⁴

Safety Plan:

A client generated plan for activities with the goal of preparing clients to address potentially risky situations and develop adaptive coping responses to situations. Safety plans should address potentially risky situations while taking into account client needs and victim and community safety. Safety plans will be submitted to the Community Supervision Team (CST) for review.

Secondary Victim:

Secondary victims can include non-victim children, non-offending parents, family members of the offender, and other individuals who are impacted by the offender's sexually offending behavior.⁵⁵

Sex Offender:

The following definition is based on Section 16-11.7-102, C.R.S. For purposes of this document a sex offender is:

1. Any (adult) person convicted of a sex offense (defined below) in Colorado on or after January 1, 1994, or;
2. Any person convicted in Colorado on or after July 1, 2000, of any criminal offense with the underlying factual basis being a sex offense, or;
3. Any person who is adjudicated as a juvenile or who receives a deferred adjudication on or after July1, 2002, for an offense that would constitute a sex offense if committed by an adult or for any

offense, the underlying factual basis of which involves a sex offense, or;

4. Any person who receives a deferred judgment or deferred sentence for the offenses specified in below is deemed convicted, or;
5. Any (adult) person convicted of any criminal offense in Colorado on or after January 1, 1994, and;
 - a. who has previously been convicted of a sex offense in Colorado, or;
 - b. who has previously been convicted in any other jurisdiction of any offense which would constitute a sex offense in Colorado, or;
 - c. who has a history of any sex offenses as defined in the *Sex Offense* definition below.

The determination of the legal status of a sex offender as either an adult or a juvenile is defined by statute.

A sex offender is also referred to as an "offender" in the body of this document; a sex offender is also referred to as a "client" and an "examinee" in sections relating to treatment and polygraph examinations respectively.

Sex Offense: For the purposes of this document, sexual offenses are identified in §16-11.7-102. For the list of specific crimes, refer to Appendix U.

Sex Offense-Specific Evaluation (SOSE): The purpose of an SOSE is to assess a client's need for treatment, determine what type of treatment is needed, and identify the risk level and any additional needs the client may have.⁵⁶ (See Section 2.000 for additional information.)

Sex Offense-Specific Treatment:⁵⁷ Sex offense-specific treatment uses evidence-based modalities to prevent reoccurring sexually abusive/aggressive behavior by helping clients at risk of sexually re-offending to: (a) effectively manage the individual factors that contribute to sexually abusive behaviors, (b) develop strengths and competencies to address criminogenic needs, (c) identify and change thoughts, feelings and actions that may contribute to sexual offending, and (d) establish and maintain stable, meaningful

⁵⁶ McGrath, R.J. (2016). Clinical strategies for evaluating sexual offenders. In Phenix, A., Hoberman, H.M. *Sexual Offending* (pp. 265-278). New York: Springer.

⁵⁷ According to Section 16-11.7-102(4), C.R.S. treatment means therapy, monitoring and supervision of any sex offender which conforms to the *Standards and Guidelines* created by the SOMB (see also Sex offense-specific treatment).

and pro-social lives. Objectives include enhancing client success and contributing to safer communities.

The purpose of treatment is to facilitate positive change in clients by replacing sexually abusive or sexually problematic behaviors with behaviors that support healthy, consensual relationships. (See Section 3.000 for additional information.)

Sexual Contact:

Rubbing or touching another person's sexual organs (i.e., breasts/chest area, buttocks, vagina, penis) either bare (under clothing) or over clothing if done for the purpose of evoking sexual arousal or sexual gratification of oneself or the other person or for the purpose of sexual abuse of the other person. Sexual contact may also include causing or allowing another person to touch one's own sexual organs either over or under the clothing, if done for the purpose of sexual arousal, gratification, or abuse. The term physical sexual contact is used interchangeably and may be used to improve some individuals' abilities to provide clear and unequivocal answers to polygraph questions. For the legal definition established by the Colorado General Assembly see §18-3-401(4).

**Sex Offender Treatment
And Monitoring Program
(SOTMP):**

This is the sex offense-specific treatment program administered in select Colorado Department of Corrections facilities.

Standard:

For the purposes of this document, standards are established by the SOMB are mandatory and designated by "shall" and serve to provide guidance on best practice.

Static Risk Factors:

For the purposes of these Standards, static risk factors refer to those characteristics that are set, are unchangeable by the client and may be environmental, or based upon other observable or diagnosable factors.

Supervising Officer:

A professional in the employ of the probation or parole departments or of a private/county community corrections facility who is primarily responsible for the supervision of the offender. Supervision includes behavioral monitoring and enforcement of compliance with supervision conditions as well as imposing, or recommending the imposition of, sanctions for non-compliant behavior.

TEAMS Model:

This model guides CST members to work collaboratively while practicing in their area of specialization. The goal of the CST's collaborative efforts is to engage offenders in treatment and supervision in order to decrease risk, enhance protective factors, and increase their intrinsic motivation for positive behavioral change.

- Treatment:** According to Section 16-11.7-102(4), C.R.S. treatment means therapy, monitoring and supervision of any sex offender which conforms to the *Standards and Guidelines* created by the SOMB (see also Sex offense-specific treatment).
- Treatment Provider:** A person who provides sex offense-specific treatment to sex offenders according to the *Standards and Guidelines* contained in this document.
- Victim:** Any person against whom sexually abusive behavior has been perpetrated or attempted.
- Victim-Centered Approach:** A victim centered approach means that the needs and interests of victims require paramount attention by professionals working with sexual offenders. Individuals and programs working with sexual offenders should always have the victim and potential victims in mind. This means a commitment to protecting victims, not re-victimizing, being sensitive to victim issues and responsive to victim needs. A victim centered approach requires an avenue to receive victim input and provide information to victims.
- Vulnerable Adult Populations:** Individuals who are less able to protect themselves because of diminished capacity due to age or cognitive capacity or are subject to someone in a position of trust.
- Young Adults:** When young adults are age 18 to age 25, the CST may exempt them from specific standards via the application of the Young Adult Modification Protocol. (See Appendix C for additional information regarding Young Adult Modification Protocol.)

SOSE: Sex Offense-Specific Evaluation
SOTMP: Sex Offender Treatment and Monitoring Program

1.000 Guidelines for Pre-Sentence Investigations

1.100 Per C.R.S. 16-11-102, each sex offender shall be the subject of a presentence investigation (PSI) which shall include a sex offense-specific evaluation. This report should be prepared in all cases where it has been ordered by the court.

Discussion: The purpose of the PSI is to provide the court with relevant information upon which to base sentencing decisions. The sex offense-specific evaluation establishes a baseline of information about the offender's risk and protective factors, treatment needs and amenability to treatment. The PSI may include recommendations about an offender's suitability for community supervision.

The PSI report, including the sex offense-specific evaluation, should be provided by the Probation Department to the Department of Corrections when applicable and should follow the sex offender in placements within the criminal justice system (see Section 7.000 - Continuity of Care and Information Sharing).

1.200 The PSI report should be completed by a pre-sentence investigator specially trained in sex offender management (See 5.175).

1.300 A PSI report shall address all the criteria pursuant to C.R.S.16-11-102.

1.400 When referring an offender for the sex offense-specific evaluation, the referral packet may include but is not limited to the following:

- A. Police reports
- B. Victim impact statements
- C. Child protection reports
- D. A criminal history
- E. Summary of available risk assessment information
- F. Prior evaluations and treatment reports
- G. Prior supervision records
- H. Release of Information

I. Any other information requested by the evaluator

- 1.500 Sex offense-specific evaluations received by the pre-sentence investigation writer that have been performed prior to an admission of guilt by the sex offender (pre-plea) may not meet the requirements of these Standards.

If the PSI writer receives a pre-plea evaluation and finds that the evaluation does not contain the information required under these Standards (see Section 2.000), the PSI writer may inform the court and provide recommendations upon request from the court. The PSI writer may seek supplemental information from the evaluator to collaboratively resolve any outstanding issues.

2.000 Standards for Sex Offense-Specific Evaluations

2.000 The purpose of a mental health sex offense-specific evaluation (hereafter evaluation) is to assess a client's need for treatment, determine what type of treatment is needed, and identify the risk level and any additional needs the client may have⁵⁸ (for the client whose instant offense conviction is for a non-sexual crime but has a history of a sex offense conviction or adjudication, see *Appendix E: Guidelines for the Evaluation and Treatment of Sex Offenders with a Current Non-Sex Conviction*). Treatment considerations should be based on the conclusions and recommendations of the evaluation. While the evaluation provides valuable information and recommendations, it should be viewed as fluid. As new information emerges, or risk level changes within the course of treatment, a client's treatment should be tailored to address those changes.⁵⁹ Because of the importance of the initial information to subsequent sentencing, supervision, treatment, and behavioral monitoring, each client shall receive a thorough assessment and evaluation⁶⁰ that examines the interaction between the client's mental health, social/systemic functioning, family and environmental functioning, and offending behaviors. Sex offense-specific evaluations are not intended to replace more comprehensive psychological or neuropsychological evaluations. Evaluators have an ethical responsibility to conduct evaluations in a comprehensive and factual manner, regardless of the client's status within the criminal justice system.

Evaluations recommending sex offense-specific treatment should suggest the use of research-informed treatment, management, and monitoring interventions that are appropriate for the risk level, needs, and responsivity^{61,62} of each individual client and that minimize that client's likelihood to sexually reoffend.⁶³ Consequently, evaluators will prioritize the physical and psychological safety of victims and potential victims in making recommendations that are

(2017). Effectiveness of a risk-need-responsivity-based treatment program for violent and sexual offenders: Results of a retrospective, quasi-experimental study. *Legal and Criminological Psychology*, 23, 85-99.

⁶² Effective service delivery of treatment and supervision requires individualization that matches the client's culture, learning style, and abilities, among other factors.

⁶³ CRS § 16-11.7-103(4) (a).

appropriate to the assessed risk and needs of each client.⁶⁴ Various stakeholders, including lawyers, judges, supervising officers, treatment providers and others, rely upon evaluations to make informed decisions at multiple points in time. Evaluators should not assume that readers possess clinical training or expertise in mental health treatment, and should attempt to minimize overemphasis on any single test or aspect of the assessment.

Approved Evaluators who provide evaluations to clients with developmental disabilities shall be SOMB approved with the qualifications required by the *Standards and Guidelines*, Section 4.400 (G), 4.510 (I) and 4.600 (K).

- 2.100 In accordance with Section 16-11-102(1) (b) C.R.S., each “sex offender” shall receive a sex offense-specific evaluation before or at the time of the pre-sentence investigation.
- 2.110 Recommendations from the evaluation should be the starting point of developing the treatment plan. Assessment is an ongoing process and should continue through each transition of supervision and treatment. Re-evaluation by Community Supervision Team (CST) members should occur as needed to ensure recognition of changing levels of risk.
- 2.120 Evaluators are expected to stay current with special considerations available in the SOMB *Standards and Guidelines* for the clients they are evaluating. Evaluators should use appropriate tools, including but not limited to those contained in the SOMB appendices. Applicable appendices include the following:
1. Appendix C: Young Adult Modification Protocol
 2. Appendix E: Guidelines for the Evaluation and Treatment of Sex Offenders with a Current Non-Sex Conviction
 3. Appendix F: Sex Offense-Specific Intake Review for Clients who have been in Prior Treatment
 4. Appendix M: Female Offender Risk Assessment
- 2.130 Evaluators shall be attentive to potential concerns about a client’s competency to provide informed assent and sign any legal releases, cooperate in the evaluation process, or participate in any recommended treatment or sentence. The status of competency can change over time, regardless of prior findings. Competency is always contingent on the *present* condition of a defendant.
- 2.140 An evaluator who suspects a defendant may not have a reasonable degree of rational or factual understanding⁶⁵ of the releases, evaluation process, legal proceedings, or potential sentences should notify the referral source, who may then alert the criminal court.⁶⁶

⁶⁴ Id.

⁶⁵ *Godinez v. Moran*, 509 U.S. 389, 396 (1993); *Dusky v. United States*, 362 U.S. 402 (1960); CRS § 16-8.5-101(11). The due process clause of the United States Constitution requires that a defendant be competent during the pendency of his/her criminal case. *Dusky, supra*.

⁶⁶The criminal judge will determine whether the identified concerns warrant a forensic competency examination or the initiation of other proceedings as provided in CRS § 16-8.5-101 et. seq.

Discussion Point: Prosecuting an incompetent defendant is prohibited throughout the execution and satisfaction of the sentence.⁶⁷ Additionally, a defendant who is incompetent cannot be sentenced. Thus, the court is required to determine whether the defendant is competent before imposing a sentence.⁶⁸

2.150 The evaluator shall obtain the informed assent of the client for the evaluation, by advising the client of the assessment and evaluation methods to be used, the purpose of the evaluation, and to whom the information will be provided. The evaluator's role shall be explained to the client. Results of the evaluation should be shared with the client, if appropriate, and the evaluator shall address any questions. The evaluation shall explain the limits of confidentiality and the obligations regarding mandatory reporting of child abuse and elder abuse.

2.150 DD/ID

A. The information shall be provided in a manner that is easily understood, verbally and in writing, or through other modes of communication that may be necessary to enhance understanding.

Discussion: When the evaluator is working with a client with developmental disabilities, and determines that informed assent could not be acquired at the time of the evaluation, the evaluator shall obtain assistance from a third party who is not a practitioner from within the same agency. A third party may be an individual or group of individuals who understands the definition of informed assent and who has/had significant knowledge of the person's unique characteristics.

B. The evaluator shall obtain the assent of the legal guardian, if applicable, and the informed assent of the client with developmental disabilities for the evaluation and assessments. The legal guardian will be informed of the evaluation methods, how the information may be used and to whom it will be released. The evaluator shall also inform the client with developmental disabilities and the legal guardian about the nature of the evaluator's relationship with the client and with the court. The evaluator shall respect the client's right to be fully informed about the evaluation procedures. Results of the evaluation may be reviewed with the client and the legal guardian upon request.

If informed assent cannot be obtained after consulting with the third party, then the evaluator shall refer the case back to the community supervision team or the court.

2.160 The evaluator shall be sensitive to any cultural, ethnic, developmental, sexual orientation, gender, medical and/or educational issues, or disabilities that become known during the evaluation.

2.170 To ensure the most accurate prediction of risk for clients, the following evaluation modalities are all required in performing a sex offense-specific evaluation:⁶⁹

⁶⁷ Jones v. District Court, 617 P.2d 803, 807 (Colo. 1980).

⁶⁸ See C.R.S. §16-8.5-102(1) (2015).

⁶⁹ McGrath, R.J. (2016). Clinical strategies for evaluating sexual offenders. In Phenix, A. Hoberman, H.M. *Sexual Offending* (pp. 265-278). New York: Springer.

- A. Use of instruments that have specific relevance to evaluating clients
- B. Use of instruments with demonstrated reliability and validity
- C. Examination and integration of criminal justice data and other collateral information including:
 - 1. The details of the current offense
 - 2. Documents that describe victim trauma, when available
 - 3. Scope of client's sexual behavior other than the current offense that may be of concern
- D. Structured clinical and sexual history interview
- E. Psychological testing and offense-specific standardized assessments/instruments
- F. Testing of risk-related sexual interest (i.e., Viewing Time [VT] instruments) or
Testing of deviant sexual arousal (i.e., Plethysmograph).

Discussion: Evaluation instruments and processes will be subject to change as more is learned in this area. For some populations, there may not be a validated risk assessment available, and therefore risk assessment should be based on clinical judgement and other relevant factors. When in doubt, the evaluator should err on the side of protecting community safety in drawing conclusions and making recommendations.

2.170 DD/ID

- A. Due to the complex issues of evaluating clients with developmental disabilities, methodologies shall be applied individually, and their administration shall be guided by the following:
 - 1. When possible, instruments should be used that have relevance and demonstrated reliability and validity, which are supported by research.
 - 2. If a required procedure is not appropriate for a specific client, the evaluator shall document in the evaluation why the required procedure was not done.
- B. Evaluators shall carefully consider the appropriateness and utility of using a plethysmograph assessment or viewing time assessment with clients who have developmental disabilities. For these assessments to be effective with this population, evaluators shall assess whether the client has a sufficient level of cognitive functioning to be able to adequately discriminate between stimulus cues. In addition, consideration shall be given to use of specialized assessment tools that have been developed for clients who have developmental disabilities.

2.200 Sex Offense-Specific Evaluation

Outlined in the following chart are the required areas of a sex offense-specific evaluation. The left-hand column identifies the required areas to be evaluated. The right-hand column identifies the evaluation procedures that are required and optional evaluation procedures that may be used. Assessment tools shall be utilized in the evaluation as appropriate to the specific client population being evaluated (e.g., female, developmentally disabled, or juvenile offense being evaluated for adult non-sex offense).

Discussion: The assessment tools identified below for each of the evaluation areas do not represent an exhaustive list of the available psychometric and behavioral measures. Some of these assessment tools have been validated, and as such should be applied following one's professional ethics and scope of practice based on the population for which it was intended and an individual client's treatment needs. The identified assessment tools are frequently used by evaluators while conducting sex offense-specific evaluations. Evaluators should follow updates related to improvements made to these tools, as they are periodically modified and improved upon. In addition, new tools may become available and may be utilized, as well. It is recognized that some methods of assessment may not be an option or the information to be reviewed may not be available.

Discussion: No single test should be seen as absolute or predictive; rather, results should be seen as contributing to the overall evaluation of the client, and his or her risk to the community.

DD/ID Discussion: Many widely used risk assessment tools have not been created specifically for clients with developmental disabilities. Therefore, the evaluator shall use caution when choosing to use such instruments, and provide necessary accommodations to meet the needs of the client when interpreting the resulting data.

2.210 Formulations and Recommendation

The recommendations shall be based upon a formulation of all pertinent data collected in the evaluation process. Each recommendation shall include a clear and concise supporting explanation.

The evaluator shall make recommendations or findings regarding:

- A. Level of risk, including an overall or cumulative assessment of the client's risk
- B. Specific risk factors that require management and potential interventions
- C. Specific protective factors that may enhance treatment amenability and overall rehabilitation
- D. Current amenability to treatment
- E. Appropriate placement options (e.g., community, outpatient, or residential)
- F. Relevant diagnostic considerations regarding the treatment of co-existing conditions, the need for medical/pharmacological treatment (if indicated), and further assessments needed to address areas of concern
- G. Other relevant considerations based on the individual client's risk and needs that could affect the safety of the client and/or community safety and/or treatment

The evaluator shall also provide information about a client's potential contact with his/her own children and suggested risk factors.

Discussion: This information should be clearly identified in the evaluation, with the purpose of providing information to assist a judge in decision formulation. Please note, evaluators are not required to make a recommendation either for or against such contact, although an evaluator may choose to include such a recommendation.

2.220 Any required evaluation areas that have not been addressed, or any required evaluation procedures that have not been performed, shall be specifically noted. In addition, the evaluator must state the limitations of the absence of any required evaluation areas or procedures on the evaluation results, conclusions or recommendations. When there is insufficient information to evaluate one of the required areas, then no conclusions shall be drawn nor recommendations made concerning that required area.

2.230 The polygraph examination may be used as an adjunct tool in the evaluation process. The polygraph should not be used to determine guilt or innocence or as the primary finder of facts for legal purposes (see Section 6.000 for Standards on the use of the polygraph).

- 2.240 Evaluators have an ethical responsibility to conduct evaluation procedures in a manner that ensures the integrity of testing data, the humane and ethical treatment of the client, and compliance with the mental health statutes. Evaluators should use testing instruments in accordance with their qualifications and experience.
- 2.250 Evaluators shall not represent or imply that an evaluation meets the criteria for a sex offense-specific evaluation if it does not comply with the SOMB *Standards and Guidelines*. Evaluators shall include a statement in each completed evaluation as to whether the evaluation is fully compliant with the SOMB *Standards and Guidelines* or not.

3.000 Standards of Practice for Treatment Providers

3.000 Sex offense-specific treatment uses evidenced-based modalities to prevent reoccurring sexually abusive/aggressive behavior by helping clients at risk of sexually offending to: (a) effectively manage the individual factors that contribute to sexually abusive behaviors, (b) develop strengths and competencies to address criminogenic needs, (c) identify and change thoughts, feelings and actions that may contribute to sexual offending, and (d) establish and maintain stable, meaningful and pro-social lives. Objectives include enhancing client success and contributing to safer communities.

The following standards for the practice of treatment providers are designed to include current evidence-based principles and best practices for therapeutic interventions in the promotion of client progression and community safety. **The purpose of treatment is to facilitate positive change in clients by replacing sexually abusive or sexually problematic behaviors with behaviors that support healthy, consensual relationships.** Meaningful change is possible and essential with clients who have been found guilty of a sexual offense. Such practice promotes safer communities by working to prevent re-offense.

Treatment needs are determined through evidence-based risk assessment. **Not all clients are at high risk for a sexual re-offense.** Research advises that clients who present with higher risk for recidivism require more intense treatment than clients who present with a lower risk for recidivism.⁷⁰ As clients present with varying factors associated with risk, therapy is individualized to address the treatment needs of each client. Therapeutic interventions are adjusted as a client's treatment needs change.

Favorable treatment outcomes are enhanced by a positive therapeutic alliance characterized as supportive and encouraging.⁷¹ Treatment plans are designed to include specific, attainable, and measurable goals that target individual treatment needs and that support the client's change process. Because of the potential for clients to engage in harmful behaviors, treatment plans include goals that promote community safety. Treatment providers affirm the potential

⁷⁰ Lovins, B., Lowenkamp, C. T., & Latessa, E. (2009). Applying the risk principle to sex offenders: Can treatment make some sex offenders worse? *The Prison Journal*, 89(3), 344-357.; Smid, W. J., Kamphuis, J. H., Wever, E. C., & Verbruggen, M. C. F. M. (2015). Risk levels, treatment duration, and drop out in a clinically composed outpatient sex offender treatment group. *Journal of Interpersonal Violence*, 30(5), 727-743.; Wakeling, H. C., Mann, R. E., & Carter, A. J. (2012). Do low-risk sexual offenders need treatment? *The Howard Journal of Criminal Justice*, 51(3), 286-299.

⁷¹ Blasko, B. L. & Jeglic, E. L. (2016). Sexual offenders' perceptions of the client-therapist relationship: The role of risk. *Sexual Abuse: A Journal of Research and Treatment*, 28(4), 271-290.; Watson, R., Daffern, M., & Thomas, S. (2017). The impact of interpersonal style and interpersonal complementarity on the therapeutic alliance between therapist and offenders in sex offender treatment. *Sexual Abuse: A Journal of Research and Treatment*, 29(2), 107-127.; Watson, R., Thomas, S., & Daffern, M. (2015). The impact of interpersonal style on ruptures and repairs in the therapeutic alliance between offenders and therapists in sex offender treatment. *Sexual Abuse: A Journal of Research and Treatment*, 1-20.

change in clients, do not compromise victim or community safety, and encourage hope for all those impacted by sexual offense.

- 3.100 Sex offense-specific treatment for clients convicted of a sexual offense shall be provided by persons (hereafter referred to as providers or listed providers) meeting qualifications described in Section 4.000 of these Standards and Guidelines.

Discussion: A provider who chooses to begin treating an alleged client during the pre-conviction stage should provide treatment in compliance with these Standards and Guidelines.

DD/ID Discussion: When providing treatment to individuals with developmental disabilities who may exhibit sexually inappropriate behaviors but who have not been convicted of a sex offense, it is recommended that the Standards be used as guidelines. The treatment of non-convicted individuals does not fall under the purview of the Sex Offender Management Board (SOMB).

- 3.120 A provider who treats convicted sex offenders under the jurisdiction of the criminal justice system must use sex offense-specific treatment (see Definition Section). This does not preclude participation in adjunctive treatment as clinically indicated based on the risk level and needs of the client. Providers shall use their clinical judgment to prioritize treatment needs and develop a treatment plan that responds to any additional treatment needs. The provider of the adjunct services shall be knowledgeable of sex offense related issues and must be approved by the Community Supervision Team. Upon initiating services, the adjunct therapist should be considered part of the Community Supervision Team (CST).

Discussion: There may be periods of time when offense-specific treatment is suspended or supplemented in order to respond to other acute needs of the client. Supplemental treatment that is necessary for the client to benefit from offense-specific treatment should be incorporated into the client's treatment plan.

- 3.130 Treatment providers shall utilize strength-based interventions with the goal of aiding the client in desisting from sexually abusive behavior. Such interventions will include approach-oriented goals that will enhance inherent and/or developed pro-social strengths.

Discussion: Clients who have committed sexual offenses approach therapy with different levels of ambivalence regarding engagement in treatment. Research has shown that therapists who demonstrated an empathic, warm, rewarding, and directive approach resulted in the greatest positive changes in clients who have sexually offended.⁷² Research has shown that a challenging and supportive approach, rather than a harsh confrontational style, produced increased treatment benefits.⁷³

3.160 Sex Offense-Specific Treatment

Treatment Providers shall use the following primary interventions:

A. Assign a risk level for each client.

1. Preliminary assignment of risk shall be conducted by the provider within the first 30 days of treatment.
2. Assignment of risk shall be based upon the information available to the provider. This includes but is not limited to: the pre-sentence evaluation, the pre-sentence investigation, police reports, clinical interview, observations, psychological test results, the intake, and possible updated risk assessments and psychological results.
3. **Treatment providers shall tailor a client's treatment dosage and intensity to match the assessed risk of the client.** Treatment dosage congruent with the client's risk and need increases the likelihood of a positive treatment outcome.⁷⁴ Responsivity factors (such as learning style, level of functioning, developmental maturity and language skills) shall be identified and incorporated when determining the course of treatment. As a client's risk or needs change, the provider shall modify treatment dosage accordingly. The provider shall consult with the CST regarding the need for referral to a program of different intensity if not offered in his/her program.
4. Risk assessment is an ongoing process throughout the client's treatment (see Section 2.000 for a list of risk assessment tools.)

B. Core Treatment Concepts

1. Risk factors identified for treatment intervention shall be supported by evidenced-based research.

Discussion: The provider should select at least one dynamic risk assessment instrument(s) to identify specific risk factors to target. (See Section 2.200 for recommended instruments.) Other risk factors may be identified, provided the risk factors are supported in sex-offense peer-reviewed literature.

2. Providers shall address the client's individualized risk factors as priority treatment targets in addition to other clinical needs and concerns.
3. The following treatment concepts shall include but not be limited each client's sex offense-specific treatment:
 - a. Acceptance of responsibility for offending and abusive behavior;

⁷⁴ Smid, W. J., Kamphuis, J. H., Wever, E. C., & Verbruggen, M. C. F. M. (2015). Risk levels, treatment duration, and drop out in a clinically composed outpatient sex offender treatment group. *Journal of Interpersonal Violence, 30*(5), 727-743.; Wakeling, H. C., Mann, R. E., & Carter, A. J. (2012). Do low-risk sexual offenders need treatment? *The Howard Journal of Criminal Justice, 51*(3), 286-299.

- i. A sexual history, including sexual offense history, disclosure process shall be a required component of treatment for the purpose of identifying the risk and treatment needs of the client. The client shall complete a sexual behavior disclosure packet (see Appendix Q), and upon completion of the disclosure process, shall be referred for a sexual history polygraph (see Section 6.012).⁷⁵

If the offender refuses to answer incriminating sexual offense history questions, including sexual offense history polygraph questions, then the provider shall meet with the supervising officer and polygraph examiner to identify and implement alternative methods of assessing and managing risk and needs. The provider shall not unsuccessfully discharge an offender from treatment for solely refusing to answer incriminating sexual offense history questions, including sexual offense history polygraph questions.

Discussion: This provision has been included in the Standards and Guidelines to ensure compliance with an offender's privilege against self-incrimination and relevant case law.

In sex offender treatment and supervision, disclosure and accountability are encouraged. Disclosure of past sexual offending behaviors is considered important to understand the offender's index offense and offense patterns, to facilitate behavioral change and can be very beneficial to offenders in relieving guilt and shame regarding past offenses.

While treatment providers shall not unsuccessfully discharge an offender from treatment solely for refusing to answer incriminating questions, a treatment provider may opt to discharge a client from treatment or not accept a client into treatment if the provider determines a factor(s) exists that compromises the therapeutic process.

- b. Identify thoughts, feelings, and behaviors that lead up to the offending behavior;
 - c. Restructure cognitive distortions;
 - d. Establish adaptive pro-social functioning;
 - e. Promote healthy sexuality and relationship skills;
 - f. Gain knowledge of victim impact and empathy.⁷⁶
- i. Offense specific treatment shall incorporate a victim centered approach. This means a commitment to protecting victims, being sensitive to victim issues and responsive to victims' needs (see Section 8.000).

⁷⁵ *United States v. Von Behren*, 822 F.3d 1139 (10th Cir. 2016).

⁷⁶ The SOMB recognizes empathy is not an evidenced-based risk factor. However, empathy is a necessary component for healthy social connections and an important skill in developing pro-social support systems.

Discussion: Community safety and the rights and interests of victims and their families are important considerations when developing and implementing assessment, treatment and other strategies to reduce the risk posed by sexual abusers.⁷⁷

Discussion: Therapists have an ethical obligation to the client. This focus includes a balanced response to the assessed needs of the client, the protection of identified victims and the prevention of further victimization. The needs of the client and victim exist on a continuum.

- ii. Clarification work shall be a required component of treatment.

Discussion: Please refer to Section 5.745 regarding the victim clarification processes. Clarification is designed to primarily benefit the victim. A victim may or may not choose to participate in the clarification process, and the CST should also make a determination that clarification is in the victim's best interests. The clarification process may also be conducted for secondary victims.

Clarification work by the offender shall occur regardless of whether the victim participates, and may include written letters, practice sessions with the provider, group work, and victim panels. In addition, verbal or face-to-face sessions with the victim may occur if the victim chooses to participate in clarification.

- g. Develop Pro-Social Living Plan.
 - i. The provider shall require clients to complete a Pro-Social Living Plan prior to completion of treatment.⁷⁸
 - ii. The Pro-Social Living Plan should aid the client in creating a life that is incompatible with offending behavior.
 - iii. This plan shall be completed in collaboration with the client and incorporate individualized strategies.
- 4. Providers may expand interventions to additional treatment topics as necessary based on the client's risk and need, and community safety.
- 5. Group therapy is the preferred modality in which sex offense-specific treatment should occur. Other treatment modalities such as individual, family, psycho-educational, and other adjunct options may be appropriate for goal-oriented purposes. The specific client needs and purpose of an alternative modality shall be determined by the therapist. Changes in modality shall be documented in the client's treatment plan and reviewed

⁷⁷ Dritt, J. L. (2011). *It's a big tent: Victim advocates and sex offender management professionals working together* [PowerPoint slides]. 30th Annual Association for the Treatment of Sexual Abusers Research and Treatment Conference.

⁷⁸A Pro-Social Living Plan is a comprehensive strategy to prevent relapse by solidifying client strengths, and mitigating risk with protective factors so that the client can successfully establish a pro-social lifestyle that is incompatible with re-offense.

pursuant to Standard 3.160(B)(6).

6. Identified risk factors shall be documented in the individualized treatment plan.

Upon a client entering treatment, a provider shall develop a written treatment plan based on the relevant needs and risks identified in current and past assessments/evaluations of the client. Treatment plans shall be reviewed with the client a minimum of every 6 months over the course of treatment. Reviews shall occur at more frequent intervals if pertinent information arises that warrants an earlier review. Clients who are in the maintenance or after-care phase of treatment shall have a treatment plan that is reviewed a minimum of every 12 months or sooner if pertinent information arises that warrants a review.

A treatment plan, with measurable goals, outcomes, and timeframes, shall be implemented after the completion of the intake evaluation process. The process shall be guided by the treatment provider and developed through collaboration with the client. The individualized plan shall promote victim and community safety. In addition, the plan shall identify the behaviors mandating offense-specific treatment and specifically address all clinical issues outlined in the intake evaluation and via validated risk assessment. The treatment goals shall be consistent with the client's treatment needs, competency and ability. It shall include identified protective and risk factors. Treatment plans shall be written in a way that is understandable to the client, based on the client's responsivity factors. When necessary, the treatment plan shall include planning for and referral to adjunct treatment.

7. Deliver services in a manner that accommodates client characteristics.
 - A. **The provider shall employ treatment methods that are responsive to the assessed needs of the client** and emphasize the physical and psychological safety of victims and potential victims. Treatment interventions shall be responsive to the client's level of intellectual functioning, learning style, personality characteristics, culture, mental and physical disabilities, motivation level, and level of denial.

Discussion DD/ID: Achieving success in the above listed content areas for the client with developmental disabilities may require modifications based on the needs of the individual such as using pictures instead of written assignments, or using a data collection system by the treatment provider to document skills learned by the client. The presence of concrete thinking, difficulty with concepts and abstraction and the need for frequent repetition and simple, direct instruction is common.
 - B. Providers shall build upon client strengths and protective factors such as motivation to change, literacy skills, lifestyle stability, and pro-social support systems.
 - C. Providers shall utilize strength-based interventions and approach oriented goals.
8. A provider shall model behavior and conduct himself/herself in a manner that is humane, non-discriminatory and consistent with their professional ethics and rules.

Additionally, providers shall not allow personal feelings regarding a client's crime(s) or behavior to interfere with professional judgment and objectivity. When a provider cannot deliver the highest quality of service for any reason, the provider shall refer the client elsewhere.

3.162 Clients who Have Filed an Appeal of their Conviction or Sentence

Where a court or the parole board has ordered a client to participate in treatment, and the client has subsequently filed a direct or post-conviction appeal of the sex crime conviction, the client may assert a right against self-incrimination such that the client cannot comply with certain requirements outlined in the SOMB Standards and Guidelines (see section 3.160). In such cases, the treatment provider shall:

1. Obtain verification that a direct, or post-conviction appeal, or post-conviction motion has been filed
2. Determine if a Use Immunity agreement has been requested by the client or denied by the prosecuting attorney (see Appendix T for additional information regarding Use Immunity - added December 9, 2019).
 - A. If a Use Immunity agreement has been offered by the prosecuting attorney, the *Standards and Guidelines* shall be followed as written.
 - B. If a Use Immunity agreement has been denied by the prosecuting attorney, treatment may be modified to include postponement of treatment work regarding the crime of conviction until such time the appeal has been concluded. This may include:
 - i. Not discussing the crime of conviction
 - ii. Not completing clarification work specific to the crime of conviction

The treatment provider shall require the client to adhere to all other components of treatment per these *Standards and Guidelines*. The treatment provider shall also notify the Application Review Committee (ARC) of the SOMB regarding the modification and submit updates regarding the status to ARC every six (6) months.

- C. If a use immunity agreement has not been requested or there is no verification of whether or not a Use Immunity agreement has been offered, the treatment provider shall submit a variance to the SOMB prior to modifying the requirements of treatment outlined in these *Standards and Guidelines*.

Discussion: Clients who are appealing the sex crime conviction can still benefit from participation in the sexual behavior disclosure process, and discuss behaviors unrelated to the conviction. Clients may also be able to participate in the sexual history polygraph process, excluding the crime of conviction, if determined to be appropriate to do so by the polygraph examiner and the CST.

It is important to note that unless the appeal is upheld (conviction overturned) a client cannot fully progress and successfully complete treatment until they have met all the required components of sex offense-specific treatment as outlined in section 3.160.

If a Use Immunity agreement is in place, the treatment provider shall treat the client in accordance with these *Standards and Guidelines*, including discussion of the crime of conviction.

Discussion: A treatment provider has the right not to accept a referral based on the provider's determination that he/she cannot meet the needs of the client.

3.165 Use of Assessment Tools within Offense-Specific Treatment

Polygraph and sexual interest/sexual arousal assessments shall be used in treatment (see Section 6.000 and Section 7.000). **These assessments can assist in learning more about a client's sexual history, sexual interest or arousal, and daily behaviors and compliance.** These assessments can encourage honesty, verify progress, promote discussions, and further build therapeutic rapport. The provider shall discuss assessment results with the client to determine how these results may change the clients' individual treatment plan. Discussion pertaining to unresolved assessment outcomes shall not be the sole indicator for discharge from offense-specific treatment. If the client refuses to answer incriminating sexual offense history questions, the CST shall convene to identify and implement alternative methods of assessing and managing risk and need (see Section 3.160 B.3). For further direction on the use of polygraph results see Sections 5.600 and 6.000.

Discussion: Providers who utilize this data shall be aware of the limitations of these technologies and shall recognize that this data is only meaningful within the context of a comprehensive evaluation and treatment process.

Discussion DD/ID: Use of some of these assessments and testing instruments with clients with developmental disabilities is relatively new. Employing these results for the purposes of assessing risk and planning for treatment should be done cautiously. Please see Section 2.000 (DD) for additional standards pertaining to evaluations. Wherever possible, materials appropriate for use with clients with developmental disabilities shall be utilized instead of materials developed for a non-developmentally disabled population.

3.170 Group Composition

- A. The ratio of treatment providers to clients in a treatment group shall not exceed 1:8. Treatment group size shall not exceed 14 clients. Larger groups may be convened solely for educational purposes.

Discussion: When determining group size, a treatment provider should continually assess group dynamics to ensure the best size for healthy group functioning. When groups consistently exceed the 1:8 ratios, therapeutic benefit decreases substantially. While it is realistic to expect group size to occasionally fluctuate due to extenuating circumstances (e.g. holidays, clients making up a missed group, co-therapist illness), such increases in

group size shall be temporary. People with additional needs, may need a smaller group to effectively progress through treatment.

- B. Genders shall not be mixed in a sex offense-specific treatment group.

Discussion: For many individuals, gender identity and gender expression can lie on a spectrum. Allowing transgender individuals to participate in a group with peers that identify as the same sex as they do may have a greater potential for the successful completion of treatment. Placement of individuals that do not fall within the binary model of gender should be based on the best environment for the client and that which has all clients' best interests in mind.

Discussion: It is understood that informed supervision sessions, victim clarifications sessions and other modalities that do not require the same level of therapeutic work as a treatment group, may successfully contain, and sometimes require, a mix of genders to participate together.

- C. **Differentiating client risk is a critical part of the therapeutic process in order to limit the degree to which low risk clients are exposed to high risk clients,** because such exposure may increase a low risk client's risk to sexually re-offend. Treatment providers should not routinely assign clients to groups comprised of individuals presenting markedly dissimilar levels of risk. If circumstances necessitate facilitating groups with dissimilar levels of risk, the treatment provider shall implement strategies to monitor for potential harm, adverse dynamics, and undue influence on low risk clients. The treatment provider shall establish a rationale for the group composition when low risk clients are mixed with high risk clients and should explore opportunities to separate these populations. As a general rule, low risk clients should be identified and excluded from high risk clients in offense-specific treatment groups. Risk score shall be determined by the combined score derived from the static and dynamic risk assessment. Where a risk-level appropriate group is not available to a client, treatment providers should use alternative modalities such as individual therapy.

Discussion: While some clients may remain in the same level throughout treatment, there is also the ability to move clients to a different level of treatment as clinically indicated. This process should be carefully facilitated based on new information such as changes in risk factors, mitigation of risk factors, or other emerging clinical issues. Providers may use their discretion for determining when and how clients should transition to a different group, if applicable and appropriate. When limited resources prevent the provider from establishing a low-risk treatment group, it is important to implement strategies and interventions that are based on client risk levels such as the use of individual sessions. Clients in all levels of treatment may be together for psycho-educational, non-therapeutic groups or classes.⁷⁹

⁷⁹ Lovins, B., Lowenkamp, C. T., & Latessa, E. J. (2009). Applying the risk principle to sex offenders: Can treatment make some sex offenders worse? *The Prison Journal*, 89(3), 344-357. Wakeling, H. C., Mann, R. E., & Carter, A. J. (2012). Do low-risk sexual offenders need treatment? *The Howard Journal of Criminal Justice*, 51(3), 286-299.

Hanson, R. K., Bourgon, G., Helmus, L., Hodgson, S. (2009). The principles of effective correctional treatment also apply to sexual offenders: A meta-analysis. *Criminal Justice and Behavior*, 36(9), 865-891.

3.175 Safety Planning

The provider should encourage and support clients in the development of safety plans for activities to prepare clients to address potentially risky situations and develop adaptive coping responses to situations. Safety plans should address potentially risky situations while taking into account client needs and victim and community safety. Safety plans will be submitted to the Community Supervision Team (CST) for review.

3.180 Maintenance Phase of Treatment

The maintenance phase of treatment gives the client the ability to demonstrate the treatment gains and tools learned within offense-specific treatment. A client may move into the maintenance phase of treatment upon:

- A. Completing all the treatment objectives outlined in the individualized treatment plan;
- B. Sustaining compliance with the program expectations of treatment and supervision; and
- C. Appearing ready for a more autonomous phase of treatment.

Movement into the maintenance phase of treatment should be the treatment provider's decision based on the client's risk and needs.

3.200 Discharge from Treatment

- A. **Successful completion of treatment shall be determined by the provider** based on all clinical indicators.⁸⁰ Such a determination will be based on the client's overall change through the treatment process, including risk level, any existing criminogenic needs and the client's sustained ability to integrate treatment concepts and tools (e.g., the Pro-Social Living Plan) into daily life. The provider shall discharge the client regardless of the length of time the client remains under supervision.
- B. There may be instances when a client is discharged from treatment prior to successfully completing offense-specific treatment. Circumstances of such discharges could include:
 - 1. Administrative Transfer - Due to a change in the client's circumstances, a client may need to change treatment providers. For example, a client has a job or residence creating an insurmountable transportation barrier.

⁸⁰ Clinical indicators can be anything that provides information about a client's overall clinical presentation, which may include but is not limited to interviews, quality of treatment participating, polygraph examination results, scores on dynamic risk assessments, psychological evaluation, behavioral observations, and collateral reports. Polygraph examination results will not be used in isolation to exclude someone from successful completion without additional evidence that indicates high risk behaviors.

2. Therapeutic Transfer - Through no fault of the client, the treatment provider is unable to meet the client's needs and will need to refer the client to another agency.
3. Medical Discharge - The client has a chronic medical condition that prohibits him from attending and benefiting from treatment.
4. Incompetency Discharge - The client cannot benefit from treatment due to a current state of incompetency.
5. Non-Compliance Discharge - The client's behavior is contradictory to the treatment and/or supervision conditions and the treatment provider, in consultation with the other CST members, determines that the client is no longer an appropriate candidate for the treatment program.

3.210 A discharge summary shall be completed at the time of discharge and in instances of a successful discharge, the discharge summary will be provided to the client prior to or at the time of discharge. In addition, the summary will be provided to the referral source, with a valid release of information, in a timely manner. Discharge summaries may be provided to other persons, with a valid release, as requested and appropriate. The information recorded by the treatment provider shall include, but is not be limited to, the following:

- A. Identification of the precipitating offense;
- B. Length of time in treatment;
- C. Reason(s) for discharge. If unsuccessful, include specific violations of the treatment contract;
- D. The treatment goals and objectives completed as well as in process;
- E. Current level of risk, including identification of specific risk and protective factors; and
- F. Further recommendations.

3.300 Confidentiality

3.310 Waivers of Confidentiality

When enrolling a client in treatment, a provider shall obtain a signed waiver of confidentiality based on the informed assent of the client. The information shall be provided in a manner that is easily understood, verbally and in writing, in the native language of the person (when available), or through other modes of communication as may be necessary to enhance understanding. The waiver of confidentiality shall extend to members of the CST and other individuals or agencies responsible for the supervision of the client. A provider shall obtain the following waivers, which should each be completed as a separate document with its own signature from the client:

Discussion Point: Waivers of Confidentiality are a requirement of participation in Sex Offense Specific Treatment as a condition of probation, parole, and community corrections.

3.310 DD/ID

- A. The provider shall obtain the informed assent of the legal guardian, if applicable, and the informed assent of the client with developmental disabilities and/or intellectual disabilities for treatment. The guardian will be informed of the treatment methods, how the information may be used and to whom it will be released. The provider shall also inform the client with developmental disabilities and/or intellectual disabilities and the guardian about the nature of the provider's relationship with the client and with the court. The provider shall respect the client's right to be fully informed about treatment procedures.
- B. If informed assent cannot be obtained after consulting with the third party, then the provider shall refer the case back to the Community Supervision Team or the court.

3.315 Authorization for the Release of Information (ROI) When a provider needs to share information about a client with an entity not covered by the waiver of confidentiality a signed ROI shall be in place.

- A. Treatment ROI: This ROI shall explain that written and verbal information will be shared between the treatment provider and the individual or agency named on the ROI. The ROI must include information regarding the time limit of the authorization as well as the procedure to revoke the authorization.
- B. Substance Use Disorder Treatment ROI: For clients undergoing substance use disorder treatment co-occurring with sex offender treatment, this ROI shall comply with the provisions of 42 C.F.R. § 2.31.
- C. Research ROI: Prior to entering information into the SOMB Data Collection System the provider must have a signed research ROI. The provider shall inform the client that this ROI is voluntary and is solely for communication with the SOMB for the purpose of research related to the Standards and Guidelines for sex offender management in Colorado, in compliance with 45 CFR § 64.508.

Discussion: Releases of Information are a voluntary aspect of Sex Offense Specific treatment. The ROI is an authorization by the client for the provider to share/receive confidential information from an identified individual or agency for the purposes of providing treatment services.

3.320 Waivers of confidentiality shall extend to the victim, the victim representative/therapist, the guardian ad litem of a child victim, the caseworker, the approved supervisor(s), the client's current partner, the guardian, or other individuals involved in the case. This is especially important with regard to, but not limited to:

- A. Client non-compliance with treatment;
- B. Information about risk, threats, and possible escalation of violence;

- C. Decisions regarding clarification or reunification of the family, and
- D. A client's contact with past or potential child victims.

3.330 The provider shall notify all clients in writing of the limits of confidentiality imposed on therapists by the mandatory reporting law, Section 19-3-304, C.R.S. and to Section 12-43-219, C.R.S.

3.340 The provider shall ensure that a client understands the scope and limits of confidentiality in the context of his/her particular situation, including the collection of collateral information, which may or may not be confidential.

3.400 *Treatment Provider-Client Contract*

3.410 The provider shall develop and utilize a written contract with each client prior to the commencement of treatment. The contract shall define the specific responsibilities of both the provider and the client. A client's failure to comply with the terms of the contract may result in discharge from treatment.

A. The provider's responsibility is to practice within their professional standards as defined in the Colorado Mental Health Practice Act⁸¹ and in the *Standards and Guidelines* established by the Colorado Sex Offender Management Board.

B. The contract shall explain the responsibility of the provider to:

1. List the costs of assessment, evaluation, and treatment, including all medical and psychological tests, physiological tests and consultations;
2. Describe the waivers of confidentiality and limits of confidentiality pursuant to Section 3.300 of these *Standards and Guidelines*. A signed waiver is required for treatment to be provided;
3. Describe the right of the client to refuse treatment and to refuse to waive confidentiality, as a result of which the provider will be unable to provide services. The contract shall also describe the potential outcomes of that decision;
4. Describe the necessary procedures the client must follow in order to revoke a waiver of confidentiality;
5. The provider shall notify all clients in writing of the limits of confidentiality imposed on therapists by the mandatory reporting law, Section 19-3-304, C.R.S. and to Section 12-43-219, C.R.S.
6. Provide instructions and describe limitations regarding the client's contact with victims, secondary victims, and minor children as listed in these *Standards and Guidelines*; and

⁸¹Section 12-43-101, C.R.S.

7. Establish expectations for the client to provide for the protection of past and potential victims from unsafe and unwanted contact with the client.
- C. The contract shall explain any responsibilities of the client, as applicable, to:
1. Pay for the costs of assessment and treatment, and include how a client may address any inability to pay with the provider. The client may also be required to pay for the costs of treatment for the victim(s) of the client's sexually abusive behavior, as well as secondary victims such as family members;
 2. Attend and participate in sex offense-specific treatment, including cooperating with polygraph testing and sexual arousal/interest testing as directed in the *Standards and Guidelines* (see Section 3.165);
 3. Comply with the limitations and restrictions as described in the terms and conditions of probation, parole, and/or community corrections;
 4. Describe the responsibility of the client to protect community safety by avoiding risky, aggressive, or re-offending behavior, avoiding high risk situations, and by reporting any such behavior to the provider and the supervising officer as soon as possible;
 5. Agree to abide by the limitations regarding the client's contact with victims, secondary victims, vulnerable populations and minor children as outlined in the SOMB's *Standards and Guidelines*; and
 6. Agree to support the protection of past and potential victims from unsafe and unwanted contact with the client.

Discussion: In addition, the provider may incorporate additional limits and expectations based upon the client's identified risks, needs and patterns of behavior. For example, limits may be placed regarding the use of pornography/sexually stimulating material, substance use, or internet use, as appropriate.

3.420 Client Files

Providers shall maintain client files in accordance with the professional standards of their individual disciplines and with Colorado state law and federal statutes on health care records. Client files shall:

- A. Document the goals of treatment, the methods used, and the client's observed progress, or lack thereof, toward reaching the goals in the treatment plans;
- B. Record specific achievements, failed assignments, rule violations and consequences; and
- C. Accurately reflect the client's treatment progress, sessions attended and changes in treatment

3.500 Managing Clients in Denial

Denial is a psychological defense mechanism used to protect the ego from anxiety producing information. In addition to being a psychological defense mechanism, denial may also be a normal,⁸² conscious action to avoid internal or external consequences associated with the offense behavior. For the purpose of this section, denial is defined as the failure of a client to accept responsibility for the offense⁸³ on a continuum from low to moderate to high. There is conflicting research regarding denial as a risk factor for sexual re-offense.⁸⁴ However, the literature also frames denial as an issue of responsivity to treatment.⁸⁵ Therefore, the intent of this section is to consider clients in denial and treatment efficacy, not the risk factors associated with client denial.

Secrecy, denial, and defensiveness are behaviors frequently exhibited by clients.⁸⁶ Research has shown cognitive distortions are significantly associated with greater denial/minimization.⁸⁷ Furthermore, attitudes supportive of sexual offending behavior have been documented to reliably predict sexual recidivism.⁸⁸ Almost all clients fluctuate in their level of accountability or minimization of the offenses. Although most are able to admit responsibility for the sexual offense relatively soon after conviction, some clients do not. Denial impedes treatment engagement, progress and efficacy.⁸⁹ Client denial is also highly distressing and emotionally damaging to victims.⁹⁰

⁸² Mann, R. E., Hanson, R. K., & Thornton, D. (2010). Assessing risk for sexual recidivism: Some proposals on the nature of psychologically meaningful risk factors. *Sexual Abuse: A Journal of Research and Treatment*, 22(2), 191-217.; Yates, P. M. (2009). Is sexual offender denial related to sex offense risk and recidivism? A review and treatment implications. *Psychology, Crime, and Law*, 15(2-3), 183-199.

Examining the Influence of denial, motivation, and risk on sexual recidivism. *Sexual Abuse: A Journal of Research and Treatment*, 22(1),79-94.; Langton, C. M., Barbaree, H. E., Harkins, L., Arenovich, T., McNamee, J., Peacock, E. J., ... Marcon, H. (2008). Denial and minimization among sexual offenders: Post treatment presentation and association with sexual recidivism. *Criminal Justice and Behavior*, 35(1), 69-98.; Mann, R. E., Hanson, R., K., & Thornton, D. (2010). Assessing risk for sexual recidivism: some proposals on the nature of psychologically meaningful risk factors. *Sexual Abuse: A Journal of Research and Treatment*, 22(2), 191-217.; Nunes, K., Hanson, K., Firestone, P., Moulden, H., Greenberg, D. & Bradford, J. (2007). Denial predicts recidivism for some sexual offenders. *Sex Abuse*, 91-105.

⁸⁵ Responsivity to treatment is the third principle of the Risk, Needs, and Responsivity Model, which influences the extent to which an offender will benefit from treatment. It states that the styles and modes of treatment delivery should be individually matched to the learning style of the offender to the extent possible (see, for example, Levenson, Prescott & D'Amora, 2010; Looman et al., 2005; Yates, 2009).

⁸⁶ Drapeau, M., Beretta, V., de Roten, Y., Koerner, A., & Despland, J. (2008). Defense styles of pedophilic offenders. *International Journal of Offender Therapy and Comparative Criminology*, 52(2), 185-195.; Harkins, L., Howard, P., Barnett, G., Wakeling, H., & Miles, C. (2015). When clients take responsibility for their offense(s), they admit to the commission of the unlawful sexual behavior and the intent behind the behavior. Failure to take responsibility for the sexual offense by attributing it to external causes rather than the result of personal decisions and behavior has been identified as a risk factor for sexual re-offense. Acceptance of responsibility is unrelated to an admission of all sexual offending behaviors for which the client was convicted.⁹¹ Taking responsibility for the sexual offense also includes the recognition of the harmful impact the behavior has had on the victim, and exhibiting motivation to engage in treatment to therapeutically address the sexually abusive behavior. It is important to recognize that motivation can be either external (system imposed) or internal (real willingness to change). One of the goals of treatment is to inculcate genuine internal motivation for change.

It is very important to remember that denial can take many forms and may change or vary in intensity over the course of treatment. Denial is considered to be a critical treatment target.⁹² The more common types of denial presented by clients consist of the following: refutation of the offense, denial of intent, denial of extent, assertion of victim willingness, denial of planning and denial of relapse potential.⁹³

Discussion: ...Under these rare circumstances, the CST should consider the following factors before granting any extension...Criminogenic needs, including but not limited to, the following: Risk-related sexual interests/arousal and behavior patterns, sexual preoccupation...

3.510 Levels of Denial

The following is a description of different levels or intensity of denial.⁹⁴ These are intended to be used as a guide to help determine client denial and a potential treatment intervention. They should be used in conjunction with the remainder of 3.500. Consensus should be reached amongst the CST when determining a client's level of denial. It is imperative that the offense specific evaluator or treatment provider has the final discretion due to clinical judgment and expertise in this specific area.

⁹² Blagden, N., Winder, B., Gregson, M., & Thorne, K. (2013) Working with denial in convicted sexual offenders: A qualitative analysis of treatment professionals' views and experiences and their implications for practice. *International Journal of Offender Therapy and Comparative Criminology*, 57(3), 332-356.; Levenson, J. S. (2011). "But I didn't do it!" Ethical treatment of sex offenders in denial. *Sexual Abuse: A Journal of Research and Treatment*, 23(3), 346-364.; McGrath et al., 2010

⁹³ See for example the Denial Minimization Checklist-III (Langton, Barbee, and McNamee, 2004) or the FoSOD, otherwise known as the Facets of Sex Offender Denial (Schneider & Wright, 2004).

⁹⁴ The utility of a multifaceted construct of denial and other forms of minimizations are emphasized as opposed to more simplified and dichotomous (yes or no) formats such as categorical denial. The importance of a continuous measure of denial has been supported by the literature in order to further distinguish an offender's criminogenic risks and amenability to engage in the therapeutic process (see for example, Langton, 2008; Levenson, 2011; Levenson and Macgowan, 2004).

Level 1: Low Denial

This level consists of clients who accept most of the responsibility for the unlawful sexual behavior involved in the offense, but may place some blame elsewhere. They may either justify their intent behind its occurrence and/or minimize its importance or harmful impact on the victim. These clients demonstrate some motivation to change.

Level 2: Moderate Denial

This level consists of clients who accept some of the responsibility for the unlawful sexual behavior in the offense. However, they place most of the blame elsewhere. They may deny the intent behind their unlawful sexual behavior and/or may not recognize the harmful impact their behavior has had on the victim. They may admit engaging in other harmful sexual behavior. They exhibit some motivation to change, although it may only be externally motivated.

Level 3: High Denial

This level consists of clients who do not accept any responsibility for any unlawful sexual behavior. They deny committing the current unlawful sexual behavior or even remotely similar behavior. They may not recognize the harmful impact sexual offending behavior has on victims (even if it is not their own behavior) and appear to have no motivation to change. Clients presenting with this level of denial may blame the victim or the system, and/or present as excessively hostile or defensive.

Discussion: Clients under appeal are not the same as clients in denial. The SOMB has a process to address treatment needs for such clients under appeal via a Standards Variance Request, which can be filed through the Application Review Committee of the SOMB.

- 3.520 Polygraph examinations may be a useful tool in reducing client denial. Clients in denial shall be referred for an instant offense polygraph examination. Arousal assessment or physiological assessment instruments may be used to assist this process. This applies to clients evaluated to be in any level of denial.

Discussion: In addition to requiring the client to undergo an instant offense polygraph regarding the offense of conviction, the CST may also require the client to undergo maintenance polygraph testing to monitor current behavior and enable the CST to respond to concerns quickly.

- 3.530 Clients who are evaluated and found to be in Level 1 or Level 2 Denial are not prohibited from participation in sex offense-specific treatment solely based on these levels of denial.
- 3.540 When making recommendations for clients evaluated and found to be in Level 3, High Denial, the evaluator/treatment provider shall consider the client's risk to re-offend sexually, his/her general criminogenic risk, victim impact and the client's protective and aggravating factors. There should be a balance between the client's need for treatment and mitigating and risk factors because untreated clients are often not in the best interest of community or victim safety.
- 3.550 Clients who are evaluated and found to be in Level 3, High Denial, are not appropriate to participate in sex offense-specific treatment. They shall participate in a Denier Intervention treatment to specifically address their denial and defensiveness. Denier Intervention should be

performance based and establish clear expectations, target factors that may motivate the client to remain in denial and apply performance based discharge criteria. Denier intervention for those evaluated to be in Level 3 denial occurs separately from regular offense specific treatment. The goal of Denier Intervention is to foster a therapeutic alliance using a variety of treatment modalities⁹⁵ and assist the client in taking at least some responsibility for the offense in order to enter full offense-specific treatment.

- 3.560** Denier intervention shall not exceed 90 days unless the CST achieves consensus and provides documentation that the client has made some progress which would justify an extension of Denier Intervention for a prescribed period of time.⁹⁶ Clients who are still in Level 3 denial and are strongly resistant after any phase of Denier Intervention is completed shall be terminated from treatment and revocation proceedings should be initiated.

Discussion: Under these rare circumstances, the CST should consider the following factors before granting any extension: 1) Level of risk to sexually re-offend 2) Level of risk to commit a new criminal offense 3) Protective factors 4) Engagement and progress made in the Denier Intervention process 5) Compliance with supervision conditions 6) Victim input, as it is important to support victim recovery 7) Criminogenic needs, including but not limited to, the following: Risk-related sexual interests/arousal and behavior patterns, sexual preoccupation, pro-offending attitudes and beliefs, intimacy deficits, emotional congruence with children, callousness and pervasive anger or hostility, self-regulation deficits, social deviance, impulsive criminal lifestyle, dysfunctional coping, and 8) Any other factor making treatment ineffective for the client.

3.560 DD/ID

An exception may be made for clients with developmental disabilities and/or intellectual disabilities who are in Level 3 denial and are strongly resistant after this three (3) month phase. If termination from treatment and revocation are not clearly indicated for a specific client, then a CST review shall occur at this 3-month mark to determine whether an extension of this pre-treatment phase followed by a second case review shall occur. Other options may be explored at this time and shall always consider the above noted discussion point (3.560).

- 3.570** Denier Intervention shall only be provided by treatment providers who also meet the requirements to provide sex offense-specific treatment, as defined in these Standards in section 4.000.
- 3.580** Treatment providers and community supervision teams must establish specific and measurable goals and tasks for clients in denial. These measurable goals shall be outlined in a treatment plan and will establish whether clients have reached the threshold of eligibility for referral to offense-specific treatment at the end of three months or earlier. It is especially important to document the client's accountability for their offenses.

⁹⁵ A therapeutic alliance between the therapist and the client consists of three core elements: (1) an agreement on the treatment goals, (2) collaboration on the tasks that will be used to achieve the goals, and (3) an overall bond that facilitates an environment of progress and collaboration (see for example, Flinton & Scholz, 2006; Levenson, Prescott & D'Amora, 2010; Marshall et al., 2002; Polaschek & Ross, 2010; Schneider & Wright, 2004).

⁹⁶ Levenson, 2011; Yates, 2009

3.600 Treatment of Clients Within the Department of Corrections

3.610 During incarceration and parole a continuum of treatment services shall be available to clients.⁹⁷

3.620 Unless otherwise noted in this section, treatment for clients in prison shall conform to the *Standards and Guidelines* and for sex offense-specific treatment described in Section 3.000 and shall be provided by therapists who meet the qualifications for treatment providers described in Section 4.000.

Prior to beginning sex offense-specific treatment, a client who has been sentenced to the Department of Corrections (DOC), and is designated to participate in the Sex Offender Treatment and Management Program (SOTMP) and who did not receive a sex offense-specific evaluation at the time of the pre-sentence investigation shall receive a sex offense-specific evaluation.

3.630 SOTMP Treatment providers shall:

- A. Prepare a summary of client's progress and participation in sex offender treatment and their institutional behavior. This summary shall be provided to the parole board prior to a release hearing;
- B. Forward pertinent documents and reports to outpatient treatment providers upon request and with a valid release. (See *Section 9.000 Continuity of Care.*)

⁹⁷ See C.R.S. 16-11.7-105.

4.000 Qualifications of Treatment Providers, Evaluators, and Polygraph Examiners Working with Sex Offenders

Pursuant to 16-11.7-106, C.R.S., the Department of Corrections, the Judicial Department, the Division of Criminal Justice of the Department of Public Safety, or the Department of Human Services shall not employ or contract with, and shall not allow sex offenders to employ or contract with any individual to provide sex offense-specific evaluation or treatment services unless the sex offense-specific evaluation or treatment services to be provided by such individual conform with these Standards.

4.100 TREATMENT PROVIDER: Adult Associate Level (First Application):

Individuals who have not previously applied to the SOMB Approved Provider List, but who are working towards meeting provider qualifications for a treatment provider or evaluator, shall apply for Associate Level status using the required application. Initial listing at the Associate Level is good for one year to allow the provider time to develop competency in the required areas. The application shall be submitted and include a supervision agreement co-signed by their approved SOMB Clinical Supervisor, and fingerprint card (for purposes of a criminal history record check pursuant to Section 16-11.7-106 (2)(a) (I), C.R.S) prior to beginning work with sex offenders.

- A. The applicant shall have a baccalaureate degree or above in a behavioral science with training or professional experience in counseling or therapy;
- B. The applicant shall hold a professional mental health license or be approved by the Department of Regulatory Agencies as a Registered Psychotherapist, Licensed Professional Counselor Candidate, Licensed Marriage and Family Therapist Candidate, Psychologist Candidate, or Clinical Social Worker, and not be under current disciplinary action that the ARC determines would impede the applicant's ability to practice as an SOMB listed provider;
- C. The applicant shall demonstrate competency according to the individual's respective professional standards and ethics consistent with the accepted standards of practice of sex offense-specific treatment;
- D. The applicant shall not have a conviction of, or a deferred judgment for, a municipal ordinance violation, misdemeanor, felony, or have accepted by a Court a plea of guilty or nolo contendere to a municipal ordinance violation, misdemeanor, or felony if the municipal ordinance violation, misdemeanor, or felony is related to the ability of the approved applicant to practice under these Standards as reviewed and determined by the Application

Review Committee. A certified copy of the judgment from a court of competent jurisdiction of such conviction or plea shall be conclusive evidence of such conviction or plea;

- E. The applicant shall submit to a current background investigation (Section 16-11.7-106 (2)(a)(III), C.R.S.);
- F. The applicant shall demonstrate compliance with the Standards; and
- G. The provider shall comply with all other requirements outlined in the SOMB Administrative Policies.
- H. **DD/ID**
Associate Level Treatment Providers who want to provide treatment services to adult sex offenders with developmental/intellectual disabilities shall demonstrate compliance with these Standards and submit an application demonstrating competency specific to working with this population.
- I. The provider shall submit a signed supervision agreement outlining that:
 1. The SOMB Clinical Supervisor shall review and co-sign all treatment plans, evaluations and reports by the applicant. The SOMB supervisor is responsible for all clinical work performed by the applicant.
 2. The SOMB Clinical Supervisor shall employ supervision methods aimed at assessing and developing required competencies. It is incumbent upon the supervisor to determine the need for co-facilitated treatment and the appropriate time to move the applicant from any co-facilitated clinical contact to non-co-facilitated clinical contact based upon that individual’s progress in attaining competency to perform such treatment.
 3. The frequency of face-to-face supervision hours specific to sex offense-specific treatment and/or evaluation calculated as follows:

Direct Clinical Contact Hours per Month	Minimum Supervision Hours per Month
0-59	2
60-79	3
80 or more	4

Discussion: The initial supervision meeting must be in-person, face to face supervision at the beginning of the supervision relationship. After these initial meetings, alternate forms of supervision (phone or some type of video conferencing) may be utilized.

4.110 All Applicants Begin at the Associate Level (First Application):

With the possible exception of some out-of-state applicants, all applicants shall apply for, and be approved at, the Associate Level treatment provider, evaluator, or polygraph examiner status prior to applying for Full Operating Level.

- A. **Out-of-State Applicants:** Individuals who hold professional licensure and reside outside Colorado may seek Full Operating Level or Associate Level status if they meet all the qualifications listed in these Standards. Required supervision hours must have been provided by an individual whose qualifications substantially match those of an SOMB Clinical Supervisor as defined in these Standards. Out-of-state applications will be reviewed on a case-by-case basis.

4.120 Professional Supervision of Associate Level Treatment Providers and Evaluators:

- A. Supervision of Associate Level Treatment Providers shall be done by an approved SOMB Clinical Supervisor with treatment provider status in good standing.
- B. Supervision of Associate Level Evaluators shall be done by an approved SOMB Clinical Supervisor with evaluator status in good standing.
- C. Supervision of Associate Level Treatment Providers / Evaluators with the DD/ID specialty shall be done by an approved SOMB Clinical Supervisor with the DD/ID specialty.
- D. The supervisor shall provide clinical supervision as stated in the Associate Level Section 4.100. Supervision hours for treatment and evaluation clinical work may be combined.
- E. The supervisor shall review and co-sign all treatment plans, evaluations, and reports generated by Associate Level Treatment Providers and Associate Level Evaluators.

4.130 Required notifications to SOMB:

Providers listed under Section 4.100 shall provide the following notifications to SOMB, as applicable:

- A. Notify the SOMB in writing within two (2) weeks of changes to contact information. In such cases where a change in agency affiliation has occurred, individuals shall be required to provide updated information, where applicable on the treatment provider/client contract, description of program services, supervision agreement, and any other information pertinent to the change of employment. Changes to contact information include any of the following:
 - 1. Name
 - 2. Treatment agency
 - 3. Address
 - 4. Phone number
 - 5. Email address
 - 6. Supervisor

- B. Notify the SOMB in writing within 10 days of any changes in their status with the Department of Regulatory Agencies (DORA). This includes being subject to the filing of a complaint, having a founded complaint from DORA, or changing a DORA approval category (e.g. from licensed to unlicensed) The SOMB may periodically contact DORA regarding an individual's licensure or registration status for information.
- C. Notify the SOMB in writing within 10 days of any arrest, conviction, nolo contender plea, or deferred judgment (other than a traffic violation of 7 points or less) for a municipal ordinance violation, misdemeanor, or felony, and sentence plea. The SOMB will be updated by the Colorado Bureau of Investigation of any of the above, and will consider such information, including proper notification of the SOMB, in its decision making related to whether an individual should continue to be listed with the SOMB.

4.200 TREATMENT PROVIDER: Adult -- Associate Level (Initial 3 years):

An Associate Level Treatment Provider may treat sex offenders under the supervision of an approved SOMB Clinical Supervisor with treatment provider status under these Standards. Following initial listing at the Associate Level the provider may submit for continued placement on the provider list as an Associate Level Treatment Provider under Section 16-11.7-106 C.R.S. An applicant shall meet all the following criteria:

- A. The applicant shall have a baccalaureate degree or above in a behavioral science with training or professional experience in counseling or therapy;
- B. The applicant shall hold a professional mental health license or be approved by the Department of Regulatory Agencies as a Registered Psychotherapist, Licensed Professional Counselor Candidate, Licensed Marriage and Family Therapist Candidate, Psychologist Candidate, or Clinical Social Worker, and not be under current disciplinary action that the ARC determines would impede the applicant's ability to practice as an SOMB listed provider;
- C. The applicant shall have completed face-to-face supervision hours specific to sex offense-specific treatment and/or evaluation calculated as follows:

Direct Clinical Contact Hours per Month	Minimum Supervision Hours per Month
0-59	2
60-79	3
80 or more	4

Discussion: The initial supervision meeting must be in-person, face to face supervision at the beginning of the supervision relationship. After these initial meetings, alternate forms of supervision (phone or some type of video conferencing) may be utilized.

- D. Within the past five (5) years, the applicant shall have taken the SOMB provided introductory training to the *Standards and Guidelines*, and completed an additional forty (40) hours of training as determined by the SOMB Clinical Supervisor and applicant based upon individualized training needs. If the applicant is applying to be a provider for adults and

juveniles, the training plan needs to reflect both populations. Please see the list of training categories at the end of this section.

- E. The applicant shall submit documentation from their approved SOMB Clinical Supervisor outlining the supervisor's assessment of the applicant's competency in the required areas and support for the applicant's continued approval as an Associate Level Treatment Provider;
- F. The applicant shall demonstrate competency according to the individual's respective professional standards and ethics consistent with the accepted standards of practice of sex offense-specific treatment;
- G. The applicant shall submit to a current background investigation (Section 16-11.7-106 (2)(a)(III), C.R.S.) that includes satisfactory references as requested by the SOMB. The SOMB may also solicit such additional references as necessary to determine compliance with the *Standards and Guidelines*. The references shall relate to the work the applicant is currently providing;
- H. The applicant shall not have a conviction of, or a deferred judgment for, a municipal ordinance violation, misdemeanor, felony, or have accepted by a Court a plea of guilty or nolo contendere to a municipal ordinance violation, misdemeanor, or felony if the municipal ordinance violation, misdemeanor, or felony is related to the ability of the approved applicant to practice under these Standards as reviewed and determined by the Application Review Committee. A certified copy of the judgment from a court of competent jurisdiction of such conviction or plea shall be conclusive evidence of such conviction or plea;
- I. The applicant shall demonstrate compliance with the *Standards and Guidelines*; and
- J. The provider shall comply with all other requirements outlined in the SOMB Administrative Policies.

4.210 Continued Placement of Associate Level Adult Treatment Providers on the Provider List:

Using a current re-application form, Associate Level Treatment Providers shall apply for continued placement on the list every 3 years by the date provided by the SOMB. Requirements are as follows:

- A. The provider shall demonstrate continued competency related to sex offenders;
- B. The applicant shall have completed face-to-face supervision hours specific to sex offense-specific treatment and/or evaluation calculated as follows:

Direct Clinical Contact Hours per Month	Minimum Supervision Hours per Month
0-59	2
60-79	3
80 or more	4

Discussion: The initial supervision meeting must be in-person, face to face supervision at the beginning of the supervision relationship. After these initial meetings, alternate forms of supervision (phone or some type of video conferencing) may be utilized.

- C. Every three (3) years the provider shall complete an SOMB provided booster training to the *Standards and Guidelines*, and complete an additional forty (40) hours of training as determined by the SOMB Clinical Supervisor and applicant based upon individualized training needs.

These training hours may be utilized to meet the qualifications for both adult and juvenile treatment providers. The provider shall demonstrate a balanced training history. Please see the list of training categories at the end of this section.

- D. The provider shall submit to a current background investigation (Section 16-11.7-106 (2)(a)(III), C.R.S.) that includes satisfactory references as requested by the SOMB. The SOMB may also solicit such additional references as necessary to determine compliance with the *Standards and Guidelines*. The references shall relate to the work the applicant is currently providing;
- E. The applicant shall not have a conviction of, or a deferred judgment for, a municipal ordinance violation, misdemeanor, felony, or have accepted by a Court a plea of guilty or nolo contendere to a municipal ordinance violation, misdemeanor, or felony if the municipal ordinance violation, misdemeanor, or felony is related to the ability of the approved applicant to practice under these Standards as reviewed and determined by the Application Review Committee. A certified copy of the judgment from a court of competent jurisdiction of such conviction or plea shall be conclusive evidence of such conviction or plea;
- F. The provider shall report any practice that is in significant conflict with the *Standards and Guidelines*;
- G. The provider shall demonstrate compliance with the *Standards and Guidelines*; and
- H. The provider shall comply with all other requirements outlined in the SOMB Administrative Policies.

4.220 Required notifications to SOMB:

Providers listed under Section 4.200 shall provide the following notifications to SOMB as applicable:

- A. Notify the SOMB in writing within two (2) weeks of changes to contact information. In such cases where a change in agency affiliation has occurred, individuals shall be required to provide updated information, where applicable on the treatment provider/client contract, description of program services, supervision agreement, and any other information pertinent to the change of employment. Changes to contact information include any of the following:
 1. Name
 2. Treatment agency
 3. Address
 4. Phone number
 5. Email address
 6. Supervisor
- B. Notify the SOMB in writing within 10 days of any changes in their status with the Department of Regulatory Agencies (DORA). This includes being subject to the filing of a complaint, having a founded complaint from DORA, or changing a DORA approval category (e.g. from licensed to unlicensed) The SOMB may periodically contact DORA regarding an individual's licensure or registration status for information.
- C. Notify the SOMB in writing within 10 days of any arrest, conviction, nolo contendere plea, or deferred judgment (other than a traffic violation of 7 points or less) for a municipal ordinance violation, misdemeanor, or felony, and sentence plea. The SOMB will be updated by the Colorado Bureau of Investigation of any of the above, and will consider such information, including proper notification of the SOMB, in its decision making related to whether an individual should continue to be listed with the SOMB.

4.300 TREATMENT PROVIDER: Adult - Full Operating Level:

Associate Level Treatment Providers wanting to move to Full Operating Level status (under Section 16-11.7-106 C.R.S.) shall submit an application and documentation of all of the requirements listed below, as well as a letter from the approved SOMB Clinical Supervisor indicating the provider's readiness and demonstration of required competencies to move to Full Operating Level provider. A Full Operating Level Treatment Provider may treat sex offenders independently and are not required per SOMB standards to have an SOMB approved Clinical Supervisor. Nothing within this section alleviates a provider from their duty to adhere to their ethical code of conduct pertaining to supervision and consultation.

- A. The provider shall have been approved on the provider list in good standing at the Associate Level or shall have met the requirements at the Associate Level as outlined in 4.200;
- B. The provider shall have attained the underlying credential of licensure or certification as a Psychiatrist, Licensed Psychologist, Licensed Clinical Social Worker, Licensed Professional Counselor, Licensed Marriage and Family Therapist, Clinical Psychiatric Nurse Specialist or Licensed Addiction Counselor, and not be under current disciplinary action that the ARC determines would impede the applicant’s ability to practice as an SOMB listed provider;

OR

The provider shall have maintained SOMB listing, in good standing, as an associate level treatment provider for at least 10 years (initial listing plus three renewal cycles) and be approved with the Department of Regulatory Agencies as a Registered Psychotherapist, Licensed Professional Counselor Candidate, Licensed Marriage and Family Therapist Candidate, Psychologist Candidate, or Clinical Social Worker, and not be under current disciplinary action that the ARC determines would impede the applicants ability to practice as an SOMB listed provider;

- C. The provider shall have demonstrated the required competencies.
- D. The provider shall have completed face-to-face supervision hours specific to sex offense-specific treatment and/or evaluation calculated as follows:

Direct Clinical Contact Hours per Month	Minimum Supervision Hours per Month
0-59	2
60-79	3
80 or more	4

Discussion: The initial supervision meeting must be in-person, face to face supervision at the beginning of the supervision relationship. After these initial meetings, alternate forms of supervision (phone or some type of video conferencing) may be utilized.

Providers should know the limits of their expertise and seek consultation and supervision as needed (i.e. clinical, medical, psychiatric). Adjunct resources should be arranged to meet these needs.

- E. Within the past five (5) years, the applicant shall have taken the SOMB provided introductory or booster training to the *Standards and Guidelines*, and completed an additional forty (40) hours (these hours are in addition to the 40 hours required for Associate Level for a total of 80 hours) of training as determined by the SOMB Clinical Supervisor and applicant based upon individualized training needs.

If the applicant is applying to be a provider for adults and juveniles, training must reflect both populations. Please see the list of training categories at the end of this section.

- F. The provider shall demonstrate competency according to the individual's respective professional standards and ethics consistent with the accepted standards of practice of sex offense-specific treatment;
- G. The applicant shall not have a conviction of, or a deferred judgment for, a municipal ordinance violation, misdemeanor, felony, or have accepted by a Court a plea of guilty or nolo contendere to a municipal ordinance violation, misdemeanor, or felony if the municipal ordinance violation, misdemeanor, or felony is related to the ability of the approved applicant to practice under these Standards as reviewed and determined by the Application Review Committee. A certified copy of the judgment from a court of competent jurisdiction of such conviction or plea shall be conclusive evidence of such conviction or plea;
- H. The provider shall submit to a current background investigation (Section 16-11.7-106 (2)(a)(III), C.R.S.) that includes satisfactory references as requested by the SOMB. The SOMB may also solicit such additional references as necessary to determine compliance with the *Standards and Guidelines*. The references shall relate to the work the applicant is currently providing;
- I. The provider shall demonstrate compliance with the *Standards and Guidelines*; and
- J. The provider shall comply with all other requirements outlined in the SOMB Administrative Policies.
- K. DD/ID

Full Operating Level Treatment Providers who want to provide treatment services to adult sex offenders with developmental/intellectual disabilities shall demonstrate compliance with these Standards and submit an application demonstrating competency specific to working with this population.

4.310 Continued Placement of Full Operating Level Adult Treatment Providers on the Provider List:

Using a current re-application form, treatment providers shall re-apply for continued placement on the list every 3 years by the date provided by the SOMB. Requirements are as follows:

- A. The provider shall have attained the underlying credential of licensure or certification as a Psychiatrist, Licensed Psychologist, Licensed Clinical Social Worker, Licensed Professional Counselor, Licensed Marriage and Family Therapist, Clinical Psychiatric Nurse Specialist or Licensed Addiction Counselor, and not be under current disciplinary action that the ARC determines would impede the applicant's ability to practice as an SOMB listed provider;

OR

The provider shall have been previously approved pursuant to Section 4.300(B).

- B. The provider shall demonstrate continued competency related to sex offenders based on; clinical experience, supervision, administration, research, training, teaching, consultation and/or policy development;
- C. Every three (3) years the provider shall complete a SOMB provided booster training to the *Standards and Guidelines*, and completed an additional forty (40) hours of training in order to maintain proficiency in the field of sex offense-specific treatment and to remain current on any developments in the assessment, treatment, and monitoring of sex offenders;

If the applicant is reapplying to be a provider for adults and juveniles, training must reflect both populations. Please see the list of training categories at the end of this section.

- D. The applicant shall not have a conviction of, or a deferred judgment for, a municipal ordinance violation, misdemeanor, felony, or have accepted by a Court a plea of guilty or nolo contendere to a municipal ordinance violation, misdemeanor, or felony if the municipal ordinance violation, misdemeanor, or felony is related to the ability of the approved applicant to practice under these Standards as reviewed and determined by the Application Review Committee. A certified copy of the judgment from a court of competent jurisdiction of such conviction or plea shall be conclusive evidence of such conviction or plea;
- E. The provider shall submit to a current background investigation (Section 16-11.7-106 (2) (a) (III), C.R.S.) that includes satisfactory references as requested by the SOMB. The SOMB may also solicit such additional references as necessary to determine compliance with the *Standards and Guidelines*. The references shall relate to the work the applicant is currently providing;
- F. The provider shall report any practice that is in significant conflict with the *Standards and Guidelines*;
- G. The provider shall demonstrate compliance with the *Standards and Guidelines*; and
- H. The provider shall comply with all other requirements outlined in the SOMB Administrative Policies.

4.320 Required notifications to SOMB:

Providers listed under section 4.300 shall provide the following notifications to SOMB as applicable:

- A. Notify the SOMB in writing within two (2) weeks of changes to contact information. In such cases where a change in agency affiliation has occurred, individuals shall be required to provide updated information, where applicable on the treatment provider/client contract, description of program services, supervision agreement, and any other information pertinent to the change of employment. Changes to contact information include any of the following:

1. Name
 2. Treatment agency
 3. Address
 4. Phone number
 5. Email address
 6. Supervisor
- B. Notify the SOMB in writing within 10 days of any changes in their status with the Department of Regulatory Agencies (DORA). This includes being subject to the filing of a complaint, having a founded complaint from DORA, or changing a DORA approval category (e.g. from licensed to unlicensed) The SOMB may periodically contact DORA regarding an individual's licensure or registration status for information.
- C. Notify the SOMB in writing within 10 days of any arrest, conviction, nolo contendere plea, or deferred judgment (other than a traffic violation of 7 points or less) for a municipal ordinance violation, misdemeanor, or felony, and sentence plea. The SOMB will be updated by the Colorado Bureau of Investigation of any of the above, and will consider such information, including proper notification of the SOMB, in its decision making related to whether an individual should continue to be listed with the SOMB.

4.400 EVALUATOR: Adult Associate Level (First Application):

Individuals who have not previously applied to the SOMB Approved Provider List as an evaluator, but who are working towards meeting qualifications for an evaluator, shall apply for Associate Level status using the required application. Initial listing at the Associate Level is good for one year to allow the evaluator time to develop competency in the required areas. The application shall be submitted and include a supervision agreement co-signed by their approved SOMB Clinical Supervisor, and fingerprint card (for purposes of a criminal history record check pursuant to Section 16-11.7-106 (2)(a)(I), C.R.S) prior to beginning work with sex offenders.

- A. The applicant shall be listed as an Associate Level or Full Operating Level Treatment Provider for adult sex offenders;
- B. The applicant shall demonstrate competency according to the individual's respective professional standards and ethics consistent with the accepted standards of practice of sex offense-specific treatment;
- C. The applicant shall not have a conviction of, or a deferred judgment for, a municipal ordinance violation, misdemeanor, felony, or have accepted by a Court a plea of guilty or nolo contendere to a municipal ordinance violation, misdemeanor, or felony if the municipal ordinance violation, misdemeanor, or felony is related to the ability of the approved applicant to practice under these Standards as reviewed and determined by the Application

Review Committee. A certified copy of the judgment from a court of competent jurisdiction of such conviction or plea shall be conclusive evidence of such conviction or plea;

- D. The applicant shall submit to a current background investigation (Section 16-11.7-106 (2)(a)(III), C.R.S.);
- E. The applicant shall demonstrate compliance with the *Standards and Guidelines*; and
- F. The applicant shall comply with all other requirements outlined in the SOMB Administrative Policies.
- G. **DD/ID**
Associate Level Evaluators who want to provide evaluation services to adult sex offenders shall demonstrate compliance with these Standards and submit an application demonstrating competency specific to working with this population.

- H. The applicant shall submit a signed supervision agreement outlining that:
 1. The SOMB Clinical Supervisor shall review and co-sign all evaluations and reports by the applicant. The SOMB supervisor is responsible for all clinical work performed by the applicant.
 2. The SOMB Clinical Supervisor shall employ supervision methods aimed at assessing and developing required competencies. It is incumbent upon the supervisor to determine the need for co-facilitated evaluations and the appropriate time to move the applicant from any co-facilitated work to non-co-facilitated work based upon that individual's progress in attaining competency to perform such evaluations.
 3. The frequency of face-to-face supervision hours specific to sex offense-specific treatment and/or evaluation calculated as follows:

Direct Clinical Contact Hours per Month	Minimum Supervision Hours per Month
0-59	2
60-79	3
80 or more	4

Discussion: The initial supervision meeting must be in-person, face to face supervision at the beginning of the supervision relationship. After these initial meetings, alternate forms of supervision (phone or some type of video conferencing) may be utilized.

4.410 Required notifications to SOMB:

Providers listed under section 4.400 shall provide the following notifications to SOMB as applicable:

- A. Notify the SOMB in writing within two (2) weeks of changes to contact information. In such cases where a change in agency affiliation has occurred, individuals shall be required to provide updated information, where applicable on the treatment provider/client contract, description of program services, supervision agreement, and any other information pertinent to the change of employment. Changes to contact information include any of the following:
 - 1. Name
 - 2. Treatment agency
 - 3. Address
 - 4. Phone number
 - 5. Email address
 - 6. Supervisor
- B. Notify the SOMB in writing within 10 days of any changes in their status with the Department of Regulatory Agencies (DORA). This includes being subject to the filing of a complaint, having a founded complaint from DORA, or changing a DORA approval category (e.g. from licensed to unlicensed) The SOMB may periodically contact DORA regarding an individual's licensure or registration status for information.
- C. Notify the SOMB in writing within 10 days of any arrest, conviction, nolo contendere plea, or deferred judgment (other than a traffic violation of 7 points or less) for a municipal ordinance violation, misdemeanor, or felony, and sentence plea. The SOMB will be updated by the Colorado Bureau of Investigation of any of the above, and will consider such information, including proper notification of the SOMB, in its decision making related to whether an individual should continue to be listed with the SOMB.

4.500 EVALUATOR: Associate Level (Initial 3 years):

An Associate Level evaluator may evaluate sex offenders under the supervision of an evaluator approved at the SOMB Clinical Supervisor Level. To qualify to provide sex offender evaluation at the Associate Level under Section 16-11.7-106 C.R.S. an applicant shall meet all the following criteria:

- A. The applicant shall be listed as an Associate Level or Full Operating Level Treatment Provider for adult sex offenders;
- B. The applicant shall have completed face-to-face supervision hours specific to sex offense-specific treatment and/or evaluation calculated as follows:

Direct Clinical Contact Hours per Month	Minimum Supervision Hours per Month
0-59	2
60-79	3
80 or more	4

Discussion: The initial supervision meeting must be in-person, face to face supervision at the beginning of the supervision relationship. After these initial meetings, alternate forms of supervision (phone or some type of video conferencing) may be utilized.

- C. Within the past five (5) years, the applicant shall have taken the SOMB provided introductory training to the *Standards and Guidelines*, and completed an additional forty (40) hours of training as determined by the SOMB Clinical Supervisor and applicant based upon individualized training needs. If the applicant is applying to be a treatment provider and evaluator the training needs to reflect both treatment and evaluation. If the applicant is applying to be an evaluator for adults and juveniles, training must reflect both populations. Please see the list of training categories at the end of this section;
- D. The applicant shall demonstrate competency according to the individual’s respective professional standards and ethics consistent with the accepted standards of practice of sex offense-specific evaluations;
- E. The applicant shall not have a conviction of, or a deferred judgment for, a municipal ordinance violation, misdemeanor, felony, or have accepted by a Court a plea of guilty or nolo contendere to a municipal ordinance violation, misdemeanor, or felony if the municipal ordinance violation, misdemeanor, or felony is related to the ability of the approved applicant to practice under these Standards as reviewed and determined by the Application Review Committee. A certified copy of the judgment from a court of competent jurisdiction of such conviction or plea shall be conclusive evidence of such conviction or plea;
- F. The applicant shall submit to a current background investigation (Section 16-11.7-106 (2) (a) (III), C.R.S.) that includes satisfactory references as requested by the SOMB. The SOMB may also solicit such additional references as necessary to determine compliance with the *Standards and Guidelines*. The references shall relate to the work the applicant is currently providing
- G. The applicant shall demonstrate continued compliance with the *Standards and Guidelines*, particularly 2.000; and
- H. The provider shall comply with all other requirements outlined in the SOMB Administrative Policies.
- I. **DD/ID**
Associate Level and Full Operating Level Evaluators who want to provide evaluations to adult sex offenders shall demonstrate compliance with these Standards and submit an application demonstrating competency specific to working with this population.

4.510 Continued Placement of Associate Level Adult Evaluators on the Provider List:

Associate Level evaluators shall apply for continued placement on the list every three (3) years by the date provided by the SOMB. Requirements are as follows:

- A. The evaluator shall demonstrate continued competency related to sex offenders;
- B. The applicant shall have completed face-to-face supervision hours specific to sex offense-specific treatment and/or evaluation calculated as follows:

Direct Clinical Contact Hours per Month	Minimum Supervision Hours per Month
0-59	2
60-79	3
80 or more	4

Discussion: The initial supervision meeting must be in-person, face to face supervision at the beginning of the supervision relationship. After these initial meetings, alternate forms of supervision (phone or some type of video conferencing) may be utilized.

- C. Every three (3) years the evaluator shall complete a SOMB provided booster training related to the *Standards and Guidelines*, and complete an additional forty (40) hours of training as determined by the SOMB Clinical Supervisor and applicant based upon individualized training needs. If the applicant is applying to be a treatment provider and evaluator the training needs to reflect both treatment and evaluation. If the applicant is applying to be an evaluator for adults and juveniles, training must reflect both populations. Please see the list of training categories at the end of this section;
- D. The evaluator shall not have a conviction of or a deferred judgment for a municipal ordinance violation, misdemeanor, felony, or have accepted by a Court a plea of guilty or nolo contendere to a municipal ordinance violation, misdemeanor, or felony if the municipal ordinance violation, misdemeanor, or felony is related to the ability of the approved applicant to practice under these Standards as reviewed and determined by the Application Review Committee. A certified copy of the judgment from a court of competent jurisdiction of such conviction or plea shall be conclusive evidence of such conviction or plea;
- E. The evaluator shall submit to a current background investigation (Section 16-11.7-106 (2) (a) (III), C.R.S.) that includes satisfactory references as requested by the SOMB. The SOMB may also solicit such additional references as necessary to determine compliance with the *Standards and Guidelines*. The references shall relate to the work the applicant is currently providing;
- F. The evaluator shall report any practice that is in significant conflict with the *Standards and Guidelines*;
- G. The evaluator shall demonstrate continued compliance with the *Standards and Guidelines*, particularly 2.000; and

H. The evaluator shall comply with all other requirements outlined in the SOMB Administrative Policies.

I. **DD/ID**

Associate Level and Full Operating Level Evaluators who want to provide evaluation and/or treatment services to adult sex offenders with developmental/intellectual disabilities shall demonstrate compliance with these Standards and submit an application providing information related to experience and knowledge of working with this population.

4.520 Required notifications to SOMB:

Providers listed under section 4.500 shall provide the following notifications to SOMB as applicable:

- A. Notify the SOMB in writing within two (2) weeks of changes to contact information. In such cases where a change in agency affiliation has occurred, individuals shall be required to provide updated information, where applicable on the treatment provider/client contract, description of program services, supervision agreement, and any other information pertinent to the change of employment. Changes to contact information include any of the following:
1. Name
 2. Treatment agency
 3. Address
 4. Phone number
 5. Email address
 6. Supervisor
- B. Notify the SOMB in writing within 10 days of any changes in their status with the Department of Regulatory Agencies (DORA). This includes being subject to the filing of a complaint, having a founded complaint from DORA, or changing a DORA approval category (e.g. from licensed to unlicensed) The SOMB may periodically contact DORA regarding an individual's licensure or registration status for information.
- C. Notify the SOMB in writing within 10 days of any arrest, conviction, nolo contendere plea, or deferred judgment (other than a traffic violation of 7 points or less) for a municipal ordinance violation, misdemeanor, or felony, and sentence plea. The SOMB will be updated by the Colorado Bureau of Investigation of any of the above, and will consider such information, including proper notification of the SOMB, in its decision making related to whether an individual should continue to be listed with the SOMB.

4.600 EVALUATOR: Adult Full Operating Level:

Associate Level evaluators wanting to move to Full Operating Level status shall complete the application and submit documentation of all of the requirements listed below, as well as a letter from the approved SOMB Clinical Supervisor indicating the evaluator’s readiness and demonstration of required competencies to move to Full Operating Level Evaluator. A Full Operating Level Evaluator may evaluate sex offenders independently and are not required per SOMB standards to have an SOMB approved Clinical Supervisor. Nothing within this section alleviates a provider from their duty to adhere to their ethical code of conduct pertaining to supervision and consultation.

- A. The provider shall have attained the underlying credential of licensure or certification as a Psychiatrist, licensed Psychologist, Licensed Clinical Social Worker, Licensed Professional Counselor, Licensed Marriage and Family Therapist, Clinical Psychiatric Nurse Specialist or Licensed Addiction Counselor, and not be under current disciplinary action that the ARC determines would impede the applicant’s ability to practice as an SOMB listed provider;

OR

The provider shall have maintained SOMB listing, in good standing, as an associate level treatment provider for at least 10 years (initial listing plus three renewal cycles) and be approved with the Department of Regulatory Agencies as a Registered Psychotherapist, Licensed Professional Counselor Candidate, Licensed Marriage and Family Therapist Candidate, Psychologist Candidate, or Clinical Social Worker, and not be under current disciplinary action that the ARC determines would impede the applicants ability to practice as an SOMB listed provider;

- B. The evaluator shall be simultaneously applying for, or currently listed as, a Full Operating Level Treatment Provider;
- C. The evaluator shall have demonstrated the required competencies based on; clinical experience, supervision, administration, research, training, teaching, consultation, and/or policy development;
- D. The evaluator shall have completed face-to-face supervision hours specific to sex offense-specific treatment and/or evaluation calculated as follows:

Direct Clinical Contact Hours per Month	Minimum Supervision Hours per Month
0-59	2
60-79	3
80 or more	4

Discussion: The initial supervision meeting must be in-person, face to face supervision at the beginning of the supervision relationship. After these initial meetings, alternate forms of supervision (phone or some type of video conferencing) may be utilized.

- E. Within the past five (5) years, the applicant shall have taken the SOMB provided introductory or booster training to the *Standards and Guidelines*, and completed an additional forty (40) hours (these hours are in addition to the 40 hours required for Associate Level for a total of 80 hours) of training as determined by the SOMB Clinical Supervisor and applicant based upon individualized training needs. If the applicant is applying to be a treatment provider and evaluator, the training needs to reflect both treatment and evaluation. If the applicant is applying to be an evaluator for adults and juveniles, training must reflect both populations. Please see the list of training categories at the end of this section;
- F. The evaluator shall demonstrate competency according to the individual's respective professional standards and ethics consistent with the accepted standards of practice of sex offense-specific evaluations;
- G. The evaluator shall not have a conviction of, or a deferred judgment for a municipal ordinance violation, misdemeanor, felony, or have accepted by a Court a plea of guilty or nolo contendere to a municipal ordinance violation, misdemeanor, or felony if the municipal ordinance violation, misdemeanor, or felony is related to the ability of the approved applicant to practice under these Standards as reviewed and determined by the Application Review Committee. A certified copy of the judgment from a court of competent jurisdiction of such conviction or plea shall be conclusive evidence of such conviction or plea;
- H. The evaluator shall submit to a current background investigation (Section 16-11.7-106 (2) (a) (III), C.R.S.) that includes satisfactory references as requested by the SOMB. The SOMB may also solicit such additional references as necessary to determine compliance with the *Standards and Guidelines*. The references shall relate to the work the applicant is currently providing.);
- I. The evaluator shall demonstrate compliance with the *Standards and Guidelines*, particularly 2.00; and
- J. The evaluator shall comply with all other requirements outlined in the SOMB Administrative Policies.
- K. **DD/ID**
Associate Level and Full Operating Level Evaluators who want to provide evaluations to adult sex offenders with developmental/intellectual disabilities shall demonstrate compliance with these Standards and submit an application providing information related to experience and knowledge of working with this population.

4.610 Continued Placement of Full Operating Level Adult Evaluators on the Provider List:

Using a current re-application form, evaluators shall apply for continued placement on the list every 3 years by the date provided by the SOMB. Requirements are as follows:

- A. The evaluator shall have the underlying credential of licensure or certification as a Psychiatrist, Psychologist, Clinical Social Worker, Professional Counselor, Marriage and Family Therapist, Clinical Psychiatric Nurse Specialist or Licensed Addiction Counselor, and

not be under current disciplinary action that the ARC determines would impede the applicant's ability to practice as an SOMB listed provider;

OR

The evaluator shall have been previously approved pursuant to Section 4.600(A).

- B. The evaluator shall demonstrate continued competency related to sex offenders based on; clinical experience, supervision, administration, research, training, teaching, consultation, and/or policy development;
- C. The evaluator may re-apply for listing as a Full Operating Level Adult Treatment Provider and Evaluator,

OR

The evaluator may discontinue their listing as a Full Operating Level Adult Treatment Provider and be placed on the Provider List as an evaluator only;

- D. Every three (3) years the evaluator shall complete a SOMB provided booster training related to the *Standards and Guidelines*, and complete and additional forty (40) hours of training in order to maintain proficiency in the field of sex offense-specific treatment and evaluation and to remain current on any developments in the assessment, treatment, and monitoring of sex offenders;

If the applicant is reapplying to be an evaluator for adults and juveniles the training needs to reflect both populations. Please see the list of training categories at the end of this section.

- E. The applicant shall not have a conviction of, or a deferred judgment for, a municipal ordinance violation, misdemeanor, felony, or have accepted by a Court a plea of guilty or nolo contendere to a municipal ordinance violation, misdemeanor, or felony if the municipal ordinance violation, misdemeanor, or felony is related to the ability of the approved applicant to practice under these Standards as reviewed and determined by the Application Review Committee. A certified copy of the judgment from a court of competent jurisdiction of such conviction or plea shall be conclusive evidence of such conviction or plea;
- F. The evaluator shall submit to a current background investigation (Section 16-11.7-106 (2)(a)(III), C.R.S.) that includes satisfactory references as requested by the SOMB. The SOMB may also solicit such additional references as necessary to determine compliance with the *Standards and Guidelines*. The references shall relate to the work the applicant is currently providing;
- G. The evaluator shall report any practice that is in conflict with the *Standards and Guidelines*;
- H. The evaluator shall demonstrate continued compliance with the *Standards and Guidelines*, particularly 2.000; and

- I. The evaluator shall comply with all other requirements outlined in the SOMB Administrative Policies.

4.620 Required notifications to SOMB:

Providers listed under section 4.600 shall provide the following notifications to SOMB as applicable:

- A. Notify the SOMB in writing within two (2) weeks of changes to contact information. In such cases where a change in agency affiliation has occurred, individuals shall be required to provide updated information, where applicable on the treatment provider/client contract, description of program services, supervision agreement, and any other information pertinent to the change of employment. Changes to contact information include any of the following:
 1. Name
 2. Treatment agency
 3. Address
 4. Phone number
 5. Email address
 6. Supervisor
- B. Notify the SOMB in writing within 10 days of any changes in their status with the Department of Regulatory Agencies (DORA). This includes being subject to the filing of a complaint, having a founded complaint from DORA, or changing a DORA approval category (e.g. from licensed to unlicensed) The SOMB may periodically contact DORA regarding an individual's licensure or registration status for information.
- C. Notify the SOMB in writing within 10 days of any arrest, conviction, nolo contendere plea, or deferred judgment (other than a traffic violation of 7 points or less) for a municipal ordinance violation, misdemeanor, or felony, and sentence plea. The SOMB will be updated by the Colorado Bureau of Investigation of any of the above, and will consider such information, including proper notification of the SOMB, in its decision making related to whether an individual should continue to be listed with the SOMB.

4.700 CLINICAL SUPERVISOR:

Full Operating Level Treatment Providers and/or Evaluators wanting to provide supervision to Associate Level Treatment Providers and/or Evaluators shall submit an application documentation and of all of the requirements listed below, as well as a letter from their current approved SOMB Clinical Supervisor indicating the provider's readiness and demonstration of

required competencies to add the listing of Clinical Supervisor. Clinical Supervisors may only provide supervision in the areas they are currently approved (e.g. juvenile, adult, DD/ID, treatment, evaluation.)

- A. The applicant shall be listed as a Full Operating Level Treatment Provider and/or Evaluator;
- B. The provider shall have attained the underlying credential of licensure or certification as a Psychiatrist, Licensed Psychologist, Licensed Clinical Social Worker, Licensed Professional Counselor, Licensed Marriage and Family Therapist, Clinical Psychiatric Nurse Specialist or Licensed Addiction Counselor, and not be under current disciplinary action that the ARC determines would impede the applicant's ability to practice as an SOMB listed provider;
- C. The applicant shall receive supervision from an approved SOMB Clinical Supervisor for assessment of his/her supervisory competence;
- D. The applicant must be assessed as competent of SOMB Clinical Supervisor competency #1 prior to advancing to providing supervision under the oversight of their approved SOMB Clinical Supervisor;
- E. Once the applicant is deemed competent in competency #1 he/she shall begin providing supervision under the oversight of his/her approved SOMB clinical supervisor;
- F. Upon application the applicant shall submit competency ratings from his/her approved SOMB Clinical Supervisor using the "Competency Based Assessment for Approval as a Supervisor", including a letter of recommendation and narrative that addresses the following:
 1. How the applicant has stayed current on the literature/research in the field (e.g. attend conferences, trainings, journals, books, etc.)
 2. Research that can be cited to support the applicant's philosophy/framework.
 3. How evolving research/literature has changed the applicants practice.
 4. How supervision content/process has been impacted in response to emerging research/literature in the field.
- G. The applicant must maintain listing in the areas he/she are providing supervision and must maintain compliance with the applicable Standards of his/her listing.

4.800 Period of Compliance:

A listed treatment provider or evaluator, who is applying or reapplying, may receive a time period to come into compliance with any Standards. If they are unable to fully comply with the *Standards and Guidelines* at the time of application, it is incumbent upon the treatment provider or evaluator to submit in writing a plan to come into compliance with the *Standards and Guidelines* within a specified time period.

4.810 Denial of Placement on the Provider List

The SOMB reserves the right to deny placement on the Provider List to any applicant to be a treatment provider, evaluator, clinical supervisor or polygraph examiner under these Standards. Reasons for denial include but are not limited to:

- A. The SOMB determines that the applicant does not demonstrate the qualifications required by these Standards;
- B. The SOMB determines that the applicant is not in compliance with the *Standards and Guidelines* of practice outlined in these Standards;
- C. The applicant fails to provide the necessary materials for application as outlined in the application materials and the administrative policies and procedures;
- D. The SOMB determines that the applicant exhibits factors (boundaries, impairments, etc.) which renders the applicant unable to treat clients; and
- E. The SOMB determines that the results of the background investigation, the references given or any other aspect of the application process are unsatisfactory.

4.820 Movement between Adult and Juvenile Listing Status:

Providers who are Full Operating or Associate Level Treatment Providers, Evaluators, and/or Polygraph Examiners for juveniles who have committed sexual offenses may apply to be listed as an Associate Level Treatment Provider, Evaluator, and/or Polygraph Examiner for adult sex offenders.

The Full Operating or Associate Level Treatment Provider, Evaluator, and/or Polygraph Examiner for juveniles who have committed sexual offenses shall submit the required application outlining relevant competency with the application criteria as identified in these Standards, and identify any experience or training that may be considered for equivalency to these criteria. The Application Review Committee (ARC) shall determine if the submitted documentation substantially meets the application criteria or not, and will provide written notification of any additional needed experience or training.

4.830 Not Currently Practicing:

When a listed provider is not currently providing any court ordered or voluntary sex offense-specific treatment, evaluation, or polygraph services, including not performing peer consultation or clinical supervision for this population but wishes to retain their listing status.

- A. A listed provider who wishes to move to not currently practicing status needs to inform the SOMB in writing of this change in status. The listed provider will be identified on the approved provider list under not currently practicing status. No contact information (phone, address, etc.) will be listed.

- B. The listed provider will be required to submit a reapplication of the not currently practicing status at the time of his/her regularly scheduled reapplication time. There will be no minimum qualifications for maintaining this status (e.g. clinical experience, supervision, training, etc.) outside of submission of a letter indicating the listed provider is not currently practicing and a \$25 reapplication administrative fee.
- C. The listed provider may not remain under not currently practicing status longer than 2 reapplication cycles (6 years). Following completion of the second reapplication submission timeframe, the listed provider must either relinquish listing status completely or submit reapplication to resume providing listed services.
- D. Before a listed provider who is under not currently practicing status may resume providing sex offense-specific treatment, evaluation, or polygraph services, the provider shall notify the SOMB in writing of the intention to resume providing such services (including the name of a supervisor for those who were Associate Level providers, or a required peer consultant for those who were Full Operating Level Providers) and receive written verification from the SOMB of the submission.
- E. Within one (1) year of resuming providing listed services, the listed provider who was formerly under not currently practicing status shall submit the applicable reapplication packet. The listed provider shall meet the minimum reapplication qualifications (e.g. training, clinical experience, competency, staying active in the field, etc.) to maintain prior listing level (Associate or Full Operating level).

4.900 POLYGRAPH EXAMINER - Intent to Apply:

Individuals who have not applied to the SOMB Approved Provider List as a Polygraph Examiner, but are working towards meeting the qualifications for an Associate Level Polygraph Examiner, shall submit an Intent to Apply, including a supervision agreement co-signed by their Full Operating Level Polygraph Examiner, and fingerprint card (pursuant to Section 16-11.7-106 (2), C.R.S.) within 30 days from the time the supervision began.

The supervision agreement shall:

- A. Specify supervision will occur at a minimum of four (4) hours of one-to-one direct supervision monthly, and that the supervisor is ultimately responsible for the test results.
- B. State the supervisor of a polygraph applicant shall review samples of the audio/video recordings of polygraphs and/or otherwise observe the examiner; and provide supervision and consultation on question formulation for polygraph exams, report writing, and other issues related to the provision of polygraph testing of sex offenders. The supervisor shall review and co-sign all polygraph examination reports completed by a polygraph examiner under their supervision.
- C. Outline the components of supervision to include, but not limited to:
 - 1. Preparation for a polygraph examination

2. Review/live observation of an examination
 3. Review of video and/or audio tapes of an examination
 4. Review of other data collected during an examination
- D. State supervision must continue for the entire time an examiner remains at the Intent to Apply or Associate Level.
- E. State the applicant shall comply with the *Standards and Guidelines* as well as all other requirements outlined in the SOMB Administrative Policies.

4.910 Required notifications to SOMB:

Providers listed under section 4.900 shall provide the following notifications to SOMB as applicable:

- A. Notify the SOMB in writing within two (2) weeks of changes to contact information. In such cases where a change in agency affiliation has occurred, individuals shall be required to provide updated information, where applicable on the treatment provider/client contract, description of program services, supervision agreement, and any other information pertinent to the change of employment. Changes to contact information include any of the following:
1. Name
 2. Treatment agency
 3. Address
 4. Phone number
 5. Email address
 6. Supervisor
- B. Notify the SOMB in writing within 10 days of any arrest, conviction, nolo contendere plea, or deferred judgment (other than a traffic violation of 7 points or less) for a municipal ordinance violation, misdemeanor, or felony, and sentence plea. The SOMB will be updated by the Colorado Bureau of Investigation of any of the above, and will consider such information, including proper notification of the SOMB, in its decision making related to whether an individual should continue to be listed with the SOMB.

4.1000 POLYGRAPH EXAMINER - Associate Level:

An Associate Level polygraph examiner may administer post-conviction sex offender polygraph tests under the supervision of a Full Operating Level Polygraph Examiner under the *Standards and Guidelines*. To qualify to administer post-conviction sex offender polygraph tests at the Associate Level, an applicant shall meet all of the following requirements:

- A. The examiner shall have graduated from an accredited American Polygraph Association (APA) school and shall have a baccalaureate degree from a four (4) year college or university;

OR

The examiner shall have graduated from an accredited American Polygraph Association (APA) school, have a minimum of a high school diploma, and shall have maintained SOMB listing, in good standing, as an associate level Polygraph Examiner for at least 10 years (initial listing plus three renewal cycles);

- B. The applicant shall complete a minimum of fifty (50) polygraph exams on post-conviction sex offenders while operating under the Intent to Apply status;
- C. The applicant shall have completed all training as outlined in Standard 4.1020 of these Standards.

If an applicant wishes to substitute any training not listed here, it is incumbent on the applicant to write a justification demonstrating the relevance of the training to this standard.

- D. The applicant shall demonstrate competency according to the individual's respective professional standards and conduct all examinations in a manner that is consistent with the reasonably accepted standard of practice in the polygraph examiner community;
- E. The applicant shall submit to a current background investigation (Section 16-11.7-106(2)(a)(III), C.R.S.) that includes satisfactory references as requested by the SOMB. The SOMB may also solicit such additional references as necessary to determine compliance with the *Standards and Guidelines*. These references shall include, but not be limited to other members of the community supervision team;
- F. The applicant shall submit quality assurance protocol forms from three (3) separate examinations submitted to three Full Operating Level Polygraph Examiners from outside the examiner's agency. Peer review must be conducted annually at a minimum;
- G. The applicant shall not have a conviction of, or a deferred judgment for, a municipal ordinance violation, misdemeanor, felony, or have accepted by a court a plea of guilty or nolo contendere to a municipal ordinance violation, misdemeanor, or felony if the municipal ordinance violation, misdemeanor, or felony is related to the ability of the approved applicant to practice under these Standards as reviewed and determined by the Application

Review Committee. A certified copy of the judgment from a court of competent jurisdiction of such conviction or plea shall be conclusive evidence of such conviction or plea;

- H. The applicant shall demonstrate compliance with the *Standards and Guidelines*; and
- I. The applicant shall comply with all other requirements outlined in the SOMB Administrative Policies.

4.1010 Professional Supervision of Associate Level Polygraph Examiners:

A supervision agreement shall be signed by both the polygraph examiner and his/her supervisor. The supervision agreement shall specify supervision occurring at a minimum of four (4) hours of one-to-one direct supervision monthly, and that the supervisor is ultimately responsible for the test results.

The applicant shall have an application on file with the SOMB that includes the supervision agreement. Supervision must continue for the entire time an examiner remains at the Associate Level. The supervision agreement must be in writing.

The supervisor of a polygraph applicant shall review samples of the audio/video recordings of polygraphs and/or otherwise observe the examiner; and provide supervision and consultation on question formulation for polygraph exams, report writing, and other issues related to the provision of polygraph testing of post-conviction sex offenders. The supervisor shall review and co-sign all polygraph examination reports completed by an Associate Level polygraph examiner under their supervision.

The components of supervision include, but are not limited to:

- A. Preparation for a polygraph examination;
- B. Review/live observation of an examination;
- C. Review of video and/or audio tapes of an examination; and
- D. Review of other data collected during an examination.

4.1010 DD/ID

Professional Supervision of Associate Level Polygraph Examiners with Developmental/Intellectual Disability Specialty

The applicant must have a Full Operating Level Polygraph Examiner with the Developmental/Intellectual Disability Specialty providing supervision of these exams.

4.1020 Continued Placement of Polygraph Examiner Associate Level on the Provider List:

Polygraph examiners at the Associate Level shall apply for continued placement on the list every three (3) years by the date provided by the SOMB. Requirements are as follows:

- A. The examiner shall have graduated from an accredited American Polygraph Association (APA) school and shall have a baccalaureate degree from a four (4) year college or university;

OR

The examiner shall have graduated from an accredited American Polygraph Association (APA) school, have a minimum of a high school diploma, and shall have maintained SOMB listing, in good standing, as an associate level Polygraph Examiner for at least 10 years (initial listing plus three renewal cycles);

- B. The examiner shall conduct a minimum of one hundred (100), with fifteen (15) juvenile post-conviction sex offense polygraph examinations in the three (3) year listing period on juveniles who have committed sexual offenses;
- C. The examiner shall complete a minimum of forty (40) hours of continuing education every three (3) years in order to maintain proficiency in the field of polygraph testing and to remain current on any developments in the assessment, treatment, and monitoring of sex offenders. Up to ten (10) hours of this training may be indirectly related to sex offender assessment/ treatment/ management. It is incumbent on the trainee to demonstrate relevance to sex offender issues if the training is indirectly related to sex offender assessment/treatment/ management. The remaining thirty (30) hours shall be directly related to sex offender assessment/treatment/management and ten (10) of these hours shall be specific to sex offenders (please reference the List of Specialized Training Categories for further details). These training hours may be utilized to meet the qualifications for both adult and juvenile polygraph examiners;
- D. The examiner shall submit to a current background investigation (Section 16-11.7-106(2)(a)(III), C.R.S.) that includes satisfactory references as requested by the SOMB. The SOMB may also solicit such additional references as necessary to determine compliance with the *Standards and Guidelines*. These references shall include, but not be limited to other members of the community supervision team;
- E. The examiner shall submit quality assurance protocol forms from three (3) separate examinations submitted to three Full Operating Level Polygraph Examiners from outside the examiner's agency. Peer review must be conducted annually at a minimum;
- F. The examiner shall not have a conviction of, or a deferred judgment for, a municipal ordinance violation, misdemeanor, felony, or have accepted by a court a plea of guilty or nolo contendere to a municipal ordinance violation, misdemeanor, or felony if the municipal ordinance violation, misdemeanor, or felony is related to the ability of the approved applicant to practice under these Standards as reviewed and determined by the Application Review Committee. A certified copy of the judgment from a court of competent jurisdiction of such conviction or plea shall be conclusive evidence of such conviction or plea;

- G. The examiner shall report any practice that is in significant conflict with the *Standards and Guidelines*;
- H. The examiner shall demonstrate compliance with the *Standards and Guidelines*; and
- I. The examiner shall comply with all other requirements outlined in the SOMB Administrative Policies.
- J. **DD/ID**
Individuals wanting to provide polygraph services to sex offenders with developmental/ intellectual disabilities shall demonstrate compliance with and submit an application providing information related to experience and knowledge of working with this population.

4.1030 Movement to Full Operating Level:

Associate Level Polygraph Examiners wanting to move to Full Operating Level status shall complete and submit documentation of:

- A. The examiner shall have conducted at least two hundred (200) post-conviction sex offender polygraph tests on adult sex offenders, with twenty-five (25) post-conviction sex offender polygraph tests on juveniles who have committed sexual offenses, as indicated in Standard 4.800; and
- B. The examiner shall submit a letter from his/her supervisor indicating the examiner's readiness to move to Full Operating Level status, including documentation of having completed the professional supervision components.

4.1040 Required notifications to SOMB:

Providers listed under section 4.1020 shall provide the following notifications to SOMB as applicable:

- A. Notify the SOMB in writing within two (2) weeks of changes to contact information. In such cases where a change in agency affiliation has occurred, individuals shall be required to provide updated information, where applicable on the treatment provider/client contract, description of program services, supervision agreement, and any other information pertinent to the change of employment. Changes to contact information include any of the following:
 - 1. Name
 - 2. Treatment agency
 - 3. Address
 - 4. Phone number
 - 5. Email address

6. Supervisor

- B. Notify the SOMB in writing within 10 days of any arrest, conviction, nolo contendere plea, or deferred judgment (other than a traffic violation of 7 points or less) for a municipal ordinance violation, misdemeanor, or felony, and sentence plea. The SOMB will be updated by the Colorado Bureau of Investigation of any of the above, and will consider such information, including proper notification of the SOMB, in its decision making related to whether an individual should continue to be listed with the SOMB.

4.1100 POLYGRAPH EXAMINER - Full Operating Level:

Polygraph examiners who administer post-conviction sex offender polygraph tests shall meet the minimum standards as indicated by the American Polygraph Association as well as the requirements throughout these Standards.

Polygraph examiners who conduct post-conviction sex offender polygraph tests on adult sex offenders shall adhere to best practices as recommended within the polygraph profession.

To qualify at the Full Operating Level to perform examinations of adult sex offenders, an examiner must meet all the following criteria:

- A. The examiner shall have graduated from an accredited American Polygraph Association (APA) school and shall have a baccalaureate degree from a four (4) year college or university;

OR

The examiner shall have graduated from an accredited American Polygraph Association (APA) school, have a minimum of a high school diploma, and shall have maintained SOMB listing, in good standing, as an associate level Polygraph Examiner for at least 10 years (initial listing plus three renewal cycles);

- B. The examiner shall have conducted at least two hundred (200) post-conviction sex offender polygraph exams, with twenty-five (25) juvenile post-conviction polygraph tests within five (5) years of application; and

Discussion: Post conviction sex offender polygraph tests completed for juvenile offenders and/or tests completed for approval as an Associate Level polygraph examiner status may be included for Full Operating Level polygraph examiner approval.

- C. Following completion of the curriculum (APA school) cited in these Standards, the applicant shall have completed an APA approved forty (40) hours of training within five (5) years of application specific to post-conviction sexual offending which focuses on the areas of evaluation, assessment, treatment and behavioral monitoring and includes, but is not limited to the following:

1. Pre-test interview procedures and formats.
2. Valid and reliable examination formats.
3. Post-test interview procedures and formats.
4. Reporting format (i.e. to whom, disclosure content, and forms).
5. Recognized and standardized polygraph procedures.
6. Administration of examinations in a manner consistent with these Standards.
7. Participation in sex offender multidisciplinary teams.
8. Use of polygraph results in the treatment and supervision process.
9. Professional standards and conduct.
10. Expert witness qualifications and courtroom testimony.
11. Interrogation techniques.
12. Maintenance/monitoring examinations.
13. Periodic/compliance examinations.

The successful completion of an APA approved forty (40) hour training specific to post-conviction sexual offending (PSOT) as referenced above will meet the qualifications for both adult and juvenile polygraph examiners.

Ten (10) of the forty (40) hours shall be specific to the treatment of adult sex offenders. These training hours may be utilized to meet the qualifications for both adult and juvenile polygraph examiners.

If an examiner wishes to substitute any training not listed here, it is incumbent on the examiner to write a justification demonstrating the relevance of the training to this standard;

D. DD/ID

Of these forty (40) hours of training, the examiner shall have completed ten (10) hours specific to adult sex offenders with developmental/intellectual disabilities who have committed sexual offenses.

- E. The examiner shall demonstrate competency according to the individual's respective professional standards and conduct all examinations in a manner that is consistent with the reasonably accepted standard of practice in the clinical polygraph examiner community;
- F. The examiner shall submit to a current background investigation (Section 16-11.7-106(2)(a)(III), C.R.S.) that includes satisfactory references as requested by the SOMB. The SOMB may also solicit such additional references as necessary to determine compliance with the *Standards and Guidelines*. These references shall include, but not be limited to other members of the community supervision team;
- G. The examiner shall not have a conviction of, or a deferred judgment for, a municipal ordinance violation, misdemeanor, felony, or have accepted by a court a plea of guilty or nolo contendere to a municipal ordinance violation, misdemeanor, or felony if the municipal ordinance violation, misdemeanor, or felony is related to the ability of the approved applicant to practice under these Standards as reviewed and determined by the Application Review Committee. A certified copy of the judgment from a court of competent jurisdiction of such conviction or plea shall be conclusive evidence of such conviction or plea;
- H. The examiner shall demonstrate compliance with the *Standards and Guidelines*;
- I. The examiner shall comply with all other requirements outlined in the SOMB Administrative Policies.

4.1110 Continued Placement of a Full Operating Level Polygraph Examiner on the Provider List:

Polygraph examiners at the Full Operating Level shall apply for continued placement on the list every three (3) years by the date provided by the SOMB. Requirements are as follows:

- A. The examiner shall have graduated from an accredited American Polygraph Association (APA) school and shall have a baccalaureate degree from a four (4) year college or university;

OR

The examiner shall have graduated from an accredited American Polygraph Association (APA) school, have a minimum of a high school diploma, and shall have maintained SOMB listing, in good standing, as an associate level Polygraph Examiner for at least 10 years (initial listing plus three renewal cycles);

- B. Full Operating Level Polygraph Examiners shall complete a minimum of forty (40) hours of continuing education every three (3) years in order to maintain proficiency in the field of polygraph testing and to remain current on any developments in the assessment, treatment, and monitoring of adult sex offenders. Up to ten (10) hours of this training may be indirectly related to sex offender assessment/treatment/management. It is incumbent on the trainee to demonstrate relevance to sex offender issues if the training is indirectly related to sex offender assessment/treatment/management. The remaining thirty (30) hours shall be directly related to sex offender assessment/ treatment/management and ten (10) of these

hours shall be specific to sex offenders (please reference the List of Specialized Training Categories for further details). These training hours may be utilized to meet the qualifications for both adult and juvenile polygraph examiners;

- C. The examiner shall conduct a minimum of one hundred (100) post-conviction polygraph examinations in the three (3) year listing period on adult sex offenders;
- D. The examiner shall submit to a current background investigation (Section 16-11.7-106(2)(a)(III), C.R.S.) that includes satisfactory references as requested by the SOMB. The SOMB may also solicit such additional references as necessary to determine compliance with the *Standards and Guidelines*. These references shall include, but not be limited to other members of the community supervision team;
- E. The examiner shall submit quality assurance protocol forms from three (3) separate examinations submitted to three Full Operating Level Polygraph Examiners from outside the examiner's agency each year. Three different types of reports should be reviewed;
- F. The examiner shall not have a conviction of, or a deferred judgment for, a municipal ordinance violation, misdemeanor, felony, or have accepted by a court a plea of guilty or nolo contendere to a municipal ordinance violation, misdemeanor, or felony if the municipal ordinance violation, misdemeanor, or felony is related to the ability of the approved applicant to practice under these Standards as reviewed and determined by the Application Review Committee. A certified copy of the judgment from a court of competent jurisdiction of such conviction or plea shall be conclusive evidence of such conviction or plea;
- G. The examiner shall report any practice that is in significant conflict with the *Standards and Guidelines*;
- H. The examiner shall demonstrate compliance with the *Standards and Guidelines*; and
- I. The examiner shall comply with all other requirements outlined in the SOMB Administrative Policies.
- J. DD/ID

Individuals wanting to provide polygraph services to adult sex offenders with developmental/ intellectual disabilities shall demonstrate compliance with these Standards and submit an application providing information related to experience and knowledge of working with this population.

Of these forty (40) hours of continuing education, the examiners shall have completed ten (10) hours specifically related to adult sex offenders with developmental/intellectual disabilities.

4.1120 Period of Compliance:

A listed polygraph examiner, who is applying, may receive a period of time to come into compliance with any Standards. If they are unable to fully comply with the *Standards and Guidelines* at the time of application, it is incumbent upon the polygraph examiner to submit in writing a plan to come into compliance with the *Standards and Guidelines* within a specified time period.

4.1130 Denial of Placement on the Provider List

The SOMB reserves the right to deny placement on the Provider List to any applicant to be a treatment provider, evaluator, clinical supervisor or polygraph examiner under these Standards. Reasons for denial include but are not limited to:

- A. The SOMB determines that the applicant does not demonstrate the qualifications required by these Standards;
- B. The SOMB determines that the applicant is not in compliance with the *Standards and Guidelines* of practice outlined in these Standards;
- C. The applicant fails to provide the necessary materials for application as outlined in the application materials and the administrative policies and procedures;
- D. The SOMB determines that the applicant exhibits factors (boundaries, impairments, etc.) which renders the applicant unable to treat clients; and
- E. The SOMB determines that the results of the background investigation, the references given or any other aspect of the application process are unsatisfactory.

4.1140 Required notifications to SOMB:

Providers listed under section 4.1000 shall provide the following notifications to SOMB as applicable:

- A. Notify the SOMB in writing within two (2) weeks of changes to contact information. In such cases where a change in agency affiliation has occurred, individuals shall be required to provide updated information, where applicable on the treatment provider/client contract, description of program services, supervision agreement, and any other information pertinent to the change of employment. Changes to contact information include any of the following:
 1. Name
 2. Treatment agency
 3. Address

4. Phone number
 5. Email address
 6. Supervisor
- B. Notify the SOMB in writing within 10 days of any arrest, conviction, nolo contendere plea, or deferred judgment (other than a traffic violation of 7 points or less) for a municipal ordinance violation, misdemeanor, or felony, and sentence plea. The SOMB will be updated by the Colorado Bureau of Investigation of any of the above, and will consider such information, including proper notification of the SOMB, in its decision making related to whether an individual should continue to be listed with the SOMB.

List of Specialized Training Categories

5.000 Standards and Guidelines for Community Supervision Teams Working with Adult Sex Offenders

5.000 The SOMB TEAMS Model and the Community Supervision Team (CST)

Treatment, Engagement, Assessment, Management and Supervision
(TEAMS) Model

5.005 TEAMS is an acronym for Treatment, Engagement, Assessment, Management and Supervision.⁹⁸ This model guides the CST members to work collaboratively with each other to assist the client/offender in becoming a pro-social, productive member of society, and in order to enhance community safety. The foundations of the model are Victim and Community Safety, the use of Evidence Based and Research Informed Practices, Informed Public Policies and Collaboration.

Community safety is enhanced when treatment providers and community supervision professionals practice in their area of specialization and work together. This collaboration should include frequent and substantive communication about information that will assist in reducing an offender's risk to the community. When the CST members respect individual roles and mutually agree upon their goals and the treatment and supervision interventions that will

⁹⁸ The TEAMS model was originally approved by consensus of the SOMB on February 19, 2016.

be pursued, the offender can be treated and managed more effectively.

The components of the TEAMS Model are:

- A. **Community Supervision** - Community supervision is made up of Probation, Parole, Community Corrections or a modified CST in the Department of Corrections.
- B. **Evaluation and Assessments** - Evaluations include empirically validated instruments that determine risk. For the purpose of the TEAMS Model, assessments may include, but are not limited to, a polygraph report, viewing time instruments and/or a PPG. (See Section 2.000.)
- C. **Treatment** - SOMB approved sex offense-specific treatment. Treatment may also include adjunct treatment for underlying mental health or drug and alcohol treatment. (See Section 3.000.)
- D. **Support System** - The support system can be an individual(s), a family member(s) or an organization(s) that provides pro-social support to enhance offender motivation for positive behavioral change.

The goal of the CST's collaborative efforts is to engage offenders in treatment and supervision in order to decrease risk, enhance protective factors, and increase their intrinsic motivation for positive behavioral change.

- 5.010 As soon as possible after the conviction and referral of a sex offender to probation, parole, or community corrections, the supervising officer should convene the initial meeting of the CST. When offenders are placed in institutions, "community" refers to the institutional setting and there is a modified CST.

Institutional treatment programs utilize a modified Community Supervision Team (CST) approach similar to that described in Section 5.000. Specifically, the polygraph examiner and SOMB approved treatment provider should work closely together, and other institutional professionals should be included in the CST as indicated. The SOMB approved clinical supervisor shall function as the head of the CST for purposes of convening the team.

- 5.015 CST members should participate in regular staffings to share information and address pertinent issues. CSTs should communicate frequently enough to manage and treat sexual offenders effectively with community safety as the highest priority. When the CST members respect individual roles and mutually agree upon their goals and the treatment and supervision interventions that will be pursued, the offender can be treated and managed more effectively.

- 5.020 Some offenders may have multiple supervising officers (e.g. a probation officer and parole officer, or a probation officer and community corrections case manager). In such cases, the supervising officers should determine the role each will serve in supervising the offender. As issues arise, agency representatives are encouraged to staff the matters and develop a coordinated response.

The following guidelines will help ensure a coordinated response in dual supervision cases:

- A. The agency that has the longest jurisdiction over the offender should be the lead agency;
- B. If the offender is required to participate in offense-specific treatment, the lead agency should refer the offender to an SOMB approved provider who is utilized and approved by both agencies;
- C. Housing assistance and other re-entry services should be provided and coordinated in a cooperative manner by both agencies to the extent they are able to assist;
- D. Staffing and communication between the supervising officers of each agency is encouraged to take place according to a set schedule and may be conducted over the phone and by email;
- E. If there is a significant disagreement or discrepancy in case management decisions, both officers should consider the offender's risk, protective factors and treatment needs, and apply the most appropriate plan;
- F. Safety plans should be approved by both officers. Where there is a significant disagreement on whether to approve a safety plan, both officers should consider the offender's protective factors, risk and treatment needs, and approve the most appropriate plan;
- G. As issues arise during dual supervision cases, agency representatives are encouraged to consistently communicate and obtain feedback to develop and ensure a coordinated team response as it pertains to issues which include, but are not limited to incentives, sanctions, technical violations, home visits and arrests;
- H. Expectations should be clearly communicated to the defendant from both agencies and as they change over time; and
- I. Each supervising officer must clearly communicate to the client his/her expectations with respect to each officer's duties/domains so that the client understands who is managing various issues in supervision, especially if the identity or role of the supervising officer changes over time.

5.025 Each Community Supervision Team (CST) is established for a particular offender and is flexible enough to include any individuals necessary to ensure the best approach to management and treatment. CST membership may therefore change over time.

At a minimum, each CST shall consist of the following as deemed appropriate and applicable:

- A. The supervising officer (except in the case of institutional settings, see Standards 5.005 and 5.010);
- B. The offender's treatment provider;
- C. Evaluators (as applicable);

- D. The polygraph examiner (as applicable); and
- E. The Victim Representative.

The team may include extended family members, other clinical professionals, law enforcement, spiritual leaders, peers, victim representatives, victims, coaches, employers and other individuals as deemed appropriate by the CST.

Discussion: It is important to note that each CST member (e.g., polygraph examiner and victim representative) may not be present at each CST meeting/staffing. However, CST members should maintain communication on a regular basis as a crucial part of the process. Victim representatives should be consulted to provide input for all CSTs, and will be more active in the cases when the actual victim is involved in the supervision and treatment of the offender. Victim representatives should always be included for consultation on safety concerns and victim contact, clarification and reunification.

5.025 DD/ID

When the CST is formed around an offender with DD/ID issues it is important that the CST consult with and/or add as an adjunct member an individual(s) who may assist the offender's transition and who understands the unique needs presented by the offender.

Therefore, in addition to the core members of the CST, any of the following, when involved, should be added to teams supervising sex offenders who have developmental or intellectual disabilities:

- A. Community Centered Board Case Manager
- B. Residential Providers
- C. Supported Living Coordinator
- D. Day Program Provider
- E. Vocational or Educational Provider
- F. Guardians
- G. Social Services
- H. Family Members
- I. Authorized Representatives
- J. Other Applicable Providers

5.030 DD/ID

Responsibilities of Additional CST Members for Sex Offenders Who Have Developmental Disabilities

When the CST is formed around an offender with DD/ID issues and additional team members are added to the CST it is important that they meet the criteria below:

- A. Team members shall have specialized training or knowledge regarding sexual offending behavior, the management and supervision of sex offenders and the impact of sex offenses on victims;
- B. Team members shall be familiar with the conditions of the offender's supervision and the treatment contract; and
- C. Team members shall immediately report to the supervising officer and the treatment provider any failure to comply with the conditions of supervision or the treatment contract or any perceived high-risk behavior.

5.050 Promoting and Monitoring Behavioral Change

The Teams Model promotes engagement of offenders by the CST in the treatment and supervision process to enhance protective factors, decrease risk and increase the offender's motivation for positive behavioral change. The SOMB enabling statute declares that "some sex offenders respond well to treatment and can function as safe, responsible and contributing members of society, provided that they receive treatment and supervision."⁹⁹ Supervision and treatment engagement is a critical component to measuring successful outcomes.¹⁰⁰

While it is the CST's duty to promote behavioral change, the responsibility of ultimate success or failure lies within the client.

- 5.055 Promoting and monitoring behavioral change is the responsibility of each member of the CST. When working with offenders, incentives have been proven to be more effective than sanctions in promoting behavioral change. Incentives should be applied more frequently than sanctions when facilitating behavioral change.¹⁰¹ Responses to negative behaviors should be applied commensurate to the severity of the violation or negative behavior.¹⁰²

Each member of the CST has a role in managing and monitoring behavioral change. Some of these roles may overlap between the community supervision officer and treatment provider.

⁹⁹ C.R.S. §18-13-1001

¹⁰⁰ Beggs, S. (2010). Within-treatment outcome among sexual offenders: A review. *Aggression and Violent Behavior, 15*(5), 369-379; Driescher, K. H. & Verschuur, J. (2010). Treatment engagement as a predictor of premature treatment termination and treatment outcome in a correctional outpatient sample. *Criminal Behavior and Mental Health, 20*, 86-99.

¹⁰¹ Bonta, J. & Andrews, D. A. (2017). *The psychology of criminal conduct* (6th ed.). New York, NY: Routledge.; Payne & Dozier (2013). Positive reinforcement as treatment for problem behavior maintained by negative reinforcement. *Journal of Applied Behavior Analysis, 46*(3), 699-703; Robinson, Lowenkamp, & Lowenkamp (2015). Towards an empirical and theoretical understand of offender reinforcement and punishment. *Federal Probation, 79*(1), 3-10.; Wood, Wilson, & Thorne (2015). Offending patterns, control balance, and affective rewards among convicted sex offenders. *Deviant Behavior, 36*(5), 368-387.

¹⁰² Bonta, J. & Andrews, D. A. (2017); Payne & Dozier (2013); Robinson et al. (2015); Wood et al. (2015).

It is essential that the supervising officer and treatment provider work collaboratively to coordinate supervision and treatment to enhance behavior change progression. The team should work closely together to identify the progress of supervision and treatment goals while recognizing and respecting the expertise of each team member. It is critical for the supervising officer and treatment provider to work collaboratively when an offender's risk is at an increased level. Each member of the CST will defer to the expertise of the other in coordinating a response during times of increased risk. The response should take into consideration the offender's assessed risk, progress in treatment, and protective factors, and victim and community safety. Final decisions concerning matters of the court, court ordered terms and conditions or parole board directives will be made by the supervising officer in consultation with the treatment provider. Final decisions concerning matters of the treatment contract, components of treatment, or treatment issues in general will be made by the treatment provider or evaluator in consultation with the supervising officer. Rare exceptions to this Standard would be if the offender poses a documented public safety risk and the supervising officer must act quickly to address the risk to the community. Promoting and monitoring behavior change begins with assessing risk and identifying target behaviors that are directly related to specific criminogenic needs areas. Assessing need areas may focus on the following areas but are not limited to:¹⁰³

- A. Cooperation with Supervision and Treatment
- B. Sexual Offense Responsibility
- C. Sexual Risk Management
- D. Sexual Behavior/Attitudes/Interest
- E. Antisocial Behavior/Attitudes/Thoughts/Beliefs/Personality Pattern
- F. Criminal Rule Breaking Attitudes or Behaviors
- G. Social Influences
- H. Problem Solving
- I. Impulsivity
- J. Treatment and Supervision Cooperation
- K. Intimacy Deficits as seen in Family and Marital
- L. Victim Impact/Empathy

The CST should consider these factors while individualizing each case. The team should collaboratively consider whether the best response is to continue working with the offender in

¹⁰³ McGrath, R. J., Cumming, G. F., & Lasher, M. P. (2013). *SOTIPS: Sex Offender Treatment Intervention and Progress Scale Manual*. 34(4), 575-608.

the community, modifying the terms and conditions of supervision or the treatment contract, or to request the offender be regressed or revoked from community supervision.¹⁰⁴

5.100 Responsibilities of the Supervising Officer Within the Team

5.105 The supervising officer shall refer sex offenders for evaluation and treatment only to providers who are approved by the SOMB.¹⁰⁵ When making referrals, the supervising officer should consider the provider who will best maximize the offender's ability to learn by matching interventions to an offender's learning style, and who will motivate the offender to change by enhancing their strengths and abilities.¹⁰⁶ The supervising officer should ensure that sex offenders sign applicable Authorizations for Release of Information to allow for information sharing (see Section 9.000).

Some factors to consider when referring for sex offense-specific treatment include, but are not limited to:¹⁰⁷

- A. Recommendations of the Sex Offense-Specific Evaluation (SOSE);
- B. Recommendations of the Presentence Investigation Report (PSIR);
- C. Community safety;
- D. Assessed risk factors (static and dynamic);
- E. Assessed criminogenic factors (e.g. employment, family circumstances, etc.);
- F. Level of supervision;
- G. Offender's specialized needs such as mental illness, physical or developmental disability, and cultural differences;
- H. Availability and proximity of services;
- I. Continuity of care;¹⁰⁸
- J. Offender stability factors (i.e. work, family situation); and
- K. Other factors based on the offender's individualized strengths and needs.

¹⁰⁴ Revised 2010 Center for Effective Public Policy - *Shaping Offender Behavior*, Mark Carey, The Carey Group.

¹⁰⁵ Section See Section 16-11.7-106, C.R.S.

¹⁰⁶ Andrews, D. A., Bonta, J., & Wormith, J. S. (2011). The Expanded Risk-Need-Responsivity (RNR) Model [Table 1]. The risk-need-responsivity (RNR) model: Does adding the good lives model contribute to effective crime prevention. *Criminal Justice and Behavior*, 38(7), 735-755.

¹⁰⁷ See Section 16-117-105(2), C.R.S.

¹⁰⁸ If an offender has already begun treatment prior to supervision, the supervising officer may nonetheless require a change of provider if, in consideration of the factors, a change is warranted.

¹⁰⁹ The supervising officer should consider the therapeutic alliance and existing protective factors that potentially could be disrupted as a result of moving the offender.

5.110 For offenders who begin community supervision on or after August 10, 2016, the supervising agency shall provide the offender with a choice of two appropriate treatment provider agencies staffed by SOMB approved providers unless the supervising agency documents in the file that, based upon the nature of the program offered, the needs of the offender, or the proximity of the appropriate treatment provider agency, fewer than two such agencies can meet the specific needs of the offender, ensure the safety of the public and provide the supervising agency with reasonable access to the treatment provider agency and the offender during the course of treatment (Section 16-11.7-105(2), C.R.S).

Discussion: A treatment provider has the right not to accept a referral based on the provider's determination that he/she cannot meet the needs of the client. For more information, refer to Section 3.000.

5.115 The supervising officer should require sex offenders who are transferred from other states through an Interstate Compact Agreement to participate in offense-specific treatment and comply with the specialized conditions of supervision contained in these Standards. For additional information regarding Interstate Compact Agreement rules, refer to the following: <http://www.interstatecompact.org/Legal/RulesStepbyStep.aspx>

5.120 For offenders who present denial or minimization per 3.500, the supervision officer should use an individualized approach that employs an array of behavioral change and compliance monitoring strategies supported by research. These efforts to monitor compliance should focus on targeting non-sexual criminogenic risk factors and enhancing treatment responsivity. Consideration of sexual risk factors and progression in offense-specific treatment should be appropriately addressed in consultation with the treatment provider.

5.125 The supervising officer should report the following to the treatment provider in a timely manner:

- A. Violations of supervision conditions;
- B. Change in supervision conditions;
- C. Notable achievements, successes and incentives; and
- D. Any other significant occurrence(s) in the offender's circumstances (e.g. arrest, health issues, employment status).

5.130 The supervising officer should employ principles designed to encourage and reinforce pro-social and positive behaviors and that minimize anti-social behavior. The supervising officer should respond to violations commensurate with the seriousness of the behavior, especially if the risk that the offender may commit another crime has increased. Where appropriate, the supervising officer should consult with the CST using risk to re-offend as a key factor in determining the appropriate level of response. Responses should be tailored to address the individual's unique risk, needs and responsivity factors in a coordinated manner whenever possible. The CST should also consider the following when responding to violation behaviors:

- A. Victim and community safety;

- B. Using risk assessments that produce consistent results to inform decision making;
 - C. Responding to behaviors as quickly as possible;
 - D. Addressing every violation;
 - E. Informing offenders how responses to violations are determined; and
 - F. Avoiding overly restrictive sanctions that unnecessarily interfere with healthy behaviors and protective factors.
- 5.135 The supervising officer should review the treatment provider's monthly written updates on the sex offender's status and progress in treatment.
- 5.140 The supervising officer should be aware of the offender's treatment progress and periodically discuss and review with the offender any treatment issues that may arise.
- 5.145 The supervising officer should assess and periodically review the level of supervision.
- 5.150 The decision to recommend early discharge from supervision should be a unanimous recommendation by all members of the CST. Sex offenders serving an indeterminate probation or parole sentence must serve the minimum of their sentence in accordance with §18-1.3-1004 C.R.S, and meet the criteria for reduction in supervision, found in the *Lifetime Criteria for Reduction in Level of Supervision while on Probation and Discharge from Probation* included in Appendix S LS3.000 in these *Standards and Guidelines*.
- 5.155 After consultation with the CST, the supervising officer may request an extension of supervision to allow an offender to successfully complete treatment if the treatment provider agrees it would be necessary and if it is statutorily permissible.
- 5.160 The CST should consider the offender's risk factors and protective factors as well as risk to the community before progressing or regressing an offender. The supervising officer in consultation with The CST should individualize incentives and sanctions to deliver consistent and tailored responses to each person's behavior with the goal of impacting short and long-term behavior change. To maximize effectiveness, responses should be swift, certain, proportional, consistent and linked to specific risk, needs and significance of the behavior.
- Discussion: Responses to violations by Community Supervision Teams should be swift, certain, proportional, consistent and tailored to the offender's risk, needs and the significance of the behavior.¹⁰⁹ These responses should be individualized to encourage behavior change with a unified approach and focus on victim protection and community safety.*
- 5.165 The supervising officer, in consultation with the CST, should not allow a sex offender who has been unsuccessfully terminated from treatment to re-enter a treatment program unless the treatment plan addresses the specific risk, need, and responsivity factors that led to the unsuccessful discharge from treatment.

¹⁰⁹ Wodahl, E. J., Ogle, R., Kadleck, C., & Gerow, K. (2013). Offender perceptions of graduated sanctions. *Crime & Delinquency*, 59(8), 1185-1210.

- 5.170 If an offender successfully completes treatment and subsequently begins to demonstrate a partial or poor understanding of sexual offense risk factors and risk management strategies or consistently uses ineffective risk management strategies with several lapses; the supervising officer may refer the offender for an updated assessment. The assessment may include a sex offense-specific evaluation to determine whether there is a need to return the offender to treatment.

Discussion: Because risk is dynamic, the CST should collaborate as to the level and duration of any change in the phase or level of supervision and treatment. The CST should defer to the expertise of individuals within their professional roles. The CST may utilize an updated sex offense-specific evaluation and should rely on current risk assessment to inform decision making.

Discussion: Just as an offender can progress through the modules and phases of treatment and supervision, an offender may be regressed through proper legal procedures, to a previous phase of supervision, treatment module or treatment program as determined by negative behavior or high-risk behavior. Such negative or high-risk behavior may include, but is not limited to, drug or alcohol use, failure to comply with treatment requirements, a significant negative change in residence or living situation, not maintaining a steady job or lack of stable employment, initiating contact with the victim(s), evidence of arousal to inappropriate stimuli or violating any of the terms and conditions of supervision.

- 5.175 Supervising officers who are assigned to supervise sex offenders should successfully complete training programs prior to assuming their caseload, when possible. Officers should attend annual continuing education specific to sex offender supervision and treatment issues. The amount of appropriate training should be determined by each agency. The training topics should include specific components of the TEAMS model such as evaluation and assessment, treatment, community supervision, risk, need and responsivity issues, victim impact and safety, and the role of offender support systems. It is also desirable for agency supervisors of officers managing sex offenders to be specifically trained in these areas.

Discussion: Supervising Officers are encouraged to periodically attend group or individual treatment sessions as determined appropriate, in coordination with the treatment provider. The visiting supervising officer shall be bound by the same confidentiality rules as the treatment provider and should sign a statement to that effect. It is understood that the treatment team may set reasonable limits on the number and timing of visits in order to minimize any disruption to the group process. The successful completion of the above training is necessary prior to the supervising officer attending any individual or group treatment sessions of sex offenders under his/her supervision.

5.200 Responsibilities of the Treatment Provider within the Team

The treatment provider is a CST member who is the subject matter expert regarding the treatment needs of the client/offender and who is responsible for providing sex offense-specific treatment in accordance with SOMB *Standards and Guidelines*. If the CST has questions or concerns related to the client/offender's treatment plan, they should be addressed with the

treatment provider. **The treatment provider shall be the ultimate authority related to the treatment of the client/offender.** The CST models pro-social, collaborative co-operative behavior for clients/offenders when they are committed to the TEAMS approach, and communicates clearly and effectively with each other and with the client/offender.

5.210 A treatment provider shall:

- A. Report to the supervising officer, in a timely manner, all known violations of the provider/client contract, including those related to specific conditions of probation, parole, or community corrections;
- B. Recommend to the CST any change in frequency or duration of contacts or any alteration in treatment modality that constitutes a change in the client/offender's treatment plan based on the individual risk and needs of the client/offender. Any permanent reduction in duration or frequency of contacts or permanent alteration in treatment modality shall be determined on an individual case basis by the provider and in consultation with the CST.

Discussion: The treatment provider is the member of the CST with expertise in the area of treatment planning and is ethically responsible for making treatment recommendations. The CST should rely on this expertise in making decisions regarding the treatment and management of the client/offender.

- C. Provide to the supervising officer, on a monthly basis, progress reports documenting a client/offender's attendance, financial status in treatment, participation in treatment, changes in risk factors, changes in the treatment plan and treatment progress.
- D. Submit a written discharge summary to the supervising officer pursuant to triggering events as listed in Section 3.200(B);
- E. Upon request, submit a status report when a court or parole board intervention occurs;
- F. Be prepared to testify in court, if necessary;
- G. Coordinate with the CST all recommendations regarding child and victim contact, including clarification and reunification, in compliance with all pertinent aspects of Section 5.700 of these *Standards and Guidelines*.
- H. Require the client/offender to complete safety plans for a variety of activities in the community (see Section 3.175) and review them in a timely manner.
- I. Encourage the client/offender to obtain friends or family who can support treatment progress and include them in the client/offender's treatment when feasible and appropriate (see Section 5.500). The treatment provider should assist members of the client/offender's support system by providing them with educational opportunities regarding their role in enhancing the client's healthy re-integration to society and increasing accountability.
- J. Utilize a victim-centered approach.

Discussion: Early in the client/offender's treatment, the treatment provider should plan for ongoing victim input and determine if the victim wants to be involved. Involving the victim and/or victim representative during the course of treatment can create better outcomes for the victim, client/offender and their families. If the victim chooses not to be involved, the provider should utilize a victim representative to provide a victim perspective as defined in Section 5.400 (for additional information regarding a victim-centered approach, see Section 8.000.)

5.300 Responsibilities of the Polygraph Examiner within the Team

- A. The examiner shall make the final determination of questions used, and determine whether to administer a broader or more narrowly focused examination within the scope of the requested polygraph exam.
- B. The polygraph examiner shall work collaboratively and participate as a member of the CST.
- C. The polygraph examiner shall submit written reports to the probation officer and treatment provider for each polygraph exam as required in section 6.160.
- D. Participation in CST meetings shall be on an as needed basis.
- E. Polygraph examiners should address any questions regarding the technical aspects of the polygraph to the CST if needed.

5.400 Responsibilities of the Victim Representative within the Team

As a member of the CST, the primary responsibility of the victim representative is to provide an avenue for victims and their families to be informed and heard. **Involving a victim representative on the CST has many benefits, including improving supervision of the offender, increasing offender accountability, building empathy for the victim, decreasing offender secrecy, preventing an unbalanced alignment with the offender and contributing to a safer community.** The exchange of information between the victim or the victim representative and CST is crucial for the rehabilitation of the offender and is often beneficial for the healing of the victim.

The victim may choose not to provide or receive information. In that circumstance, the victim representative will contribute general input regarding the perspective of victim(s) to the CST. The victim representative should also provide general victim input in cases such as internet crimes when the intended victim is a law enforcement officer posing as a child or in cases where victims are unidentified in child sexual abuse images. Bringing the victim perspective is important in protecting potential victims and the community.

Upon convening, the CST should identify the best person to be the victim representative for each individual case, such as the victim therapist, a victim advocate, or other (refer to Resources for Victim Representation). Due to the importance of victim contribution to the CST

for the reasons stated above, the victim representative should make reasonable attempts to contact the victim(s) in order to determine the victim's desired level of involvement and provide the victim(s) with accurate information regarding offender treatment and management. The CST shall orient the victim representative to the function of the team and the representative's role as a CST member.

5.405 Victim Representative shall:

- A. Assure that the CST is operating with a victim centered approach (see Section 8.000: Victim Impact and a Victim Centered Approach);
- B. Assure that the CST is emphasizing victim safety, both physically and psychologically, throughout the treatment, supervision and management of the offender;
- C. Share information received from the victim and concerns of the victim with the CST when available. Such information could include safety concerns, grooming behaviors, specifics of the offense and offending behaviors;
- D. Convey information to the victim as agreed upon by the CST such as, but not limited to, terms and conditions of probation, general treatment contract, treatment and supervision timelines, offender location, progress in treatment and on supervision, victim clarification, family reunification planning and any other pertinent information as determined by the CST;

Discussion: Teams should discuss what information can and should be shared, taking into account what information is valuable for the victim to feel safe and for the victim to feel that the community as a whole is protected. Teams have legal and ethical considerations when determining what information is appropriate for sharing with victims and should exercise good professional judgment. Victims are assisted by understanding why decisions are made in the interest of public safety. Even with support systems in place, the criminal justice system is still difficult for victims. Teams can honor and contribute to justice for victims by operating with a victim centered approach.

- E. Provide input on how CST decisions may affect victims, secondary victims or potential victims;
- F. Assist the CST in ensuring that victim needs and perspectives are considered and responded to by the CST to the best of their ability;
- G. Offer support, referrals, and resource information to the victim and victim's family;
- H. Participate in CST meetings;
- I. Contribute to the treatment content by providing the following types of information to the CST:
 - 1. Impact of sexual offending on victims, secondary victims, and the community;
 - 2. Recognition of harm done to victims;

3. Restitution and reparation to victims and others impacted by the offense including the community;
 4. Impact of offender denial on victims; and
 5. Input regarding victim contact, clarification and family reunification when appropriate.
- J. Submit questions from the victim to the CST for review and share the responses to these questions with the victim or explain why a question may not be answered. The representative can also explain to the victim why certain types of information cannot be shared;
 - K. Function as a liaison between the victim or victim therapist, and CST as needed;
 - L. Advocate on behalf of the victim for the non-offending parent and family members to support the victim, prioritize the victim's safety, physical and emotional well-being and to address the needs of the victim. This parental and family support is critical for the healing of the victim;
 - M. Assist with planning for the victim clarification sessions or family reunification, if appropriate to the case; and
 - N. Assist with issues related to newly identified victims, when necessary.

5.500 Role of Family Members and Natural Supports within the Team

The TEAMS Model recognizes that **an individual's support system is an important factor in a person's motivation for change**. Those who have offended are more likely to achieve success when they receive caring support from families¹¹⁰ and other natural support systems (e.g. - friends, Circles of Support and Accountability, spiritual advisors, etc.) and the community. Such support encourages an individual's engagement in treatment, efforts to live a healthy and productive life, and success in meeting supervision requirements.¹¹¹

CSTs should recognize that family members may possess important history, and should welcome information that can be valuable in the treatment and supervision of a person who has offended. Engaging an individual's family and friends supports behavioral change and enhances the safety of those who have been victimized and the community. When support system members understand and are supportive of treatment and supervision requirements, there can be a positive impact on the person who has been victimized, the community, and the person

¹¹⁰ The term "family" is used in a broad sense and should be defined by the person who has offended.

¹¹¹ de Vries Robbé, M., Mann, R. E., Maruna, S., & Thornton, D. (2015). An exploration of protective factors supporting desistance from sexual offending. *Sexual abuse: a journal of research and treatment*, 27(1), 16-33.; Willis, G. M., & Grace, R. C. (2009). Assessment of Community Reintegration Planning for Sex Offenders Poor Planning Predicts Recidivism. *Criminal Justice and Behavior*, 36(5), 494-512; Willis, G. M., & Grace, R. C. (2008). The quality of community reintegration planning for child molester's effects on sexual recidivism. *Sexual Abuse: A Journal of Research and Treatment*, 20(2), 218-240.

who has offended.

In situations where family members are providing support both to family members who have been victimized and to those who have offended against them, considerable challenges may arise. Family members should ensure that the support they are providing to the person who has committed the offense does not compromise or negatively impact the safety, physical or emotional well-being, and needs of the person who has been victimized. (For additional information, see Section 8.000: Victim Impact and A Victim Centered Approach).

If members of the support system are not prepared to fulfill this important role, the CST should help educate and guide them about the treatment process. Individuals under the supervision of the CST should be encouraged to include members of their support system in the change process. In some instances, it may be necessary for the CST to help the person who has offended to recognize that until potential support members address their own needs, they may not be capable or appropriate, at that point in time, to provide positive support.

In the event the CST has exhausted their efforts in providing education or guidance to the support system, and certain members of the support system have demonstrated over time that they are unable to provide positive support, the CST can temporarily choose to discontinue or limit the support system's involvement. The CST should continue to assess and work with the support system so that it can provide positive pro-social support in the future.

The CST should involve families and friends who support behavioral change which will enhance the safety of those who have been victimized and the community, as well as help the person who has offended to live a safe and pro-social life. As CST's accept and engage natural support systems within the treatment and supervision process, it is important to recognize that support offered by family members and friends falls along a continuum of involvement. This involvement can range from provision of basic needs and expression of care and concern to direct engagement in treatment and supervision processes. All types of healthy support should be welcomed by CSTs. Examples of such support include but are not limited to:

- A. Assisting with basic needs such as housing, transportation and finances;
- B. Providing positive social support, healthy social interaction, encouragement, and role modeling;
- C. Participating in individual or family therapy sessions as agreed upon by the offender and treatment provider;
- D. Participating in supervision meetings as agreed upon by the offender and supervising officer;
- E. Providing peer support or mentoring to the offender;
- F. Becoming an Approved Supervisor (see Section 5.780 - 5.786);
- G. Becoming an Approved Community Support Person (see Section 5.790 -5.793); and
- H. Becoming a CDOC Approved Support Person (see CDOC Administrative Regulation 700-19).

5.600 *The Use of Polygraph within the Team*

- 5.605 The polygraph shall be used (see Section 6.210 on suitability for testing) to gather information to assist the CST in individualizing their approach to the offender's risk and need, and to gauge how the offender will respond to supervision and treatment interventions. The polygraph shall be used in conjunction with other information to inform adjustments to supervision and treatment. The goal is to promote offender honesty and accountability. The polygraph results (see Section 6.000) shall not be used in isolation without considering information gathered from other behavioral monitoring tools. The polygraph shall not be used in isolation to remove protective factors. The CST response to behaviors utilizing the polygraph shall be based on offender risk and needs.
- 5.610 In instances when the CST has concerns related to an offender's suitability for testing, they shall consult with the polygraph examiner. The determination regarding an offender's suitability for polygraph testing rests with the polygraph examiner.¹¹² (See Section 6.210 for additional information regarding suitability for polygraph testing.)
- 5.615 If pursuant to Standard 6.210, the polygraph examiner determines the offender is currently unsuitable for polygraph examination, the requirement for polygraph examination may be waived. This waiver is for the current polygraph only, and is not a permanent waiver. However, if the offender has a condition that is not likely to improve, the CST shall consider granting a waiver for future testing as well. If the CST determines that a waiver is appropriate, this decision, and the reason for the decision, shall be documented by the supervising officer and treatment provider.
- 5.620 If the CST determines that the polygraph shall be waived, they shall determine what information is being sought and if there are alternate methods which can be utilized to obtain this information. (See Section 6.210). Alternate methods may include the use of GPS or Electronic Monitoring, drug/alcohol testing, plethysmograph testing, viewing time (VT) assessment, and other case management practices such as collateral contacts, office and home visits, employment visits, computer and phone monitoring, and increased supervision and treatment requirements.
- 5.625 Either the supervising officer or the treatment provider may collaborate with the polygraph examiner to determine content areas for question formulation. However, they shall defer to the polygraph examiner to make the final determination of question formulation, and to determine whether to administer a broader or more narrowly focused examination (see Section 6.030).
- 5.630 The CST shall continually assess the ongoing use of maintenance/monitoring polygraphs, and may adjust the use of maintenance/monitoring polygraphs based on all clinical indicators, including prior polygraph results and an offender's risk and needs. The polygraph frequency may be increased when risk is elevated and decreased when the offender demonstrates engagement with supervision and treatment, and protective factors are enhanced. This change

¹¹²Polygraph examiners have experience and training specific to suitability of potential examinees. Therefore, the supervising officer and treatment provider should defer to the polygraph examiner's expertise regarding this subject matter.

in risk should be measured by an objective dynamic risk assessment tool. (For additional information on maintenance and monitoring polygraph testing frequency, see Section 6.013.)

Discussion: The following guidelines may be considered by the CST when determining maintenance/monitoring exam frequency: What information is being sought by the polygraph and how will this information inform treatment and supervision? Are there alternate methods which can be utilized to obtain the information being sought? What risk factor(s) is the CST concerned with and how is this factor(s) connected to the frequency of examinations? In addition, the CST should defer to the polygraph examiner to ensure appropriate testing parameters (e.g., timeframe, subject matter, etc.) suggested by the CST will result in an exam with a high degree of validity and accuracy. (For example, the CST may decrease the frequency of the maintenance exams to 9 months and monitoring exams to 1 year.) Question formulation is a key factor impacting test validity and therefore, should only be completed by the polygraph examiner (see Section 6.022).

- 5.635 **CST decisions and responses shall not be based solely on the results of a polygraph examination.** The polygraph results alone (e.g., no deception indicated, deception indicated, and inconclusive/no opinion results) and considered in isolation without additional information or disclosures, are not necessarily supportive of increased risk to re-offend.¹¹³ (See Sections 6.000 and 6.013.)
- 5.640 **Adjustments to treatment and supervision shall be based on risk and need as determined by all forms of clinical indicators** including information from pre- and post-test interviews, offender behavior and accountability, transparency and engagement in treatment, dynamic risk assessment, information gained during clinical sessions, information provided by offender family and support systems, information received from victim sources, offender compliance to supervision terms and conditions and the treatment contract, and information gained through interaction with the supervising officer.
- 5.645 The CST shall not make conditional for the offender any increase or decrease in supervision level, or any other consequence, based upon the finding of non-deceptive, inconclusive, or deceptive polygraph results.
- 5.650 The CST shall discuss information learned from the polygraph examination (including pre- and post-test interviews/admissions) and determine the best course of response (see 5.630 above).

Discussion: The CST should reinforce and support offender disclosure prior to a polygraph exam. Openness and honesty can be a new behavior for some offenders and should be identified as a strength in terms of treatment engagement and supervision compliance. The expectation for an offender is to disclose prior to the polygraph exam, and the CST should communicate this to the offender prior to the exam so the offender understands this expectation. Conversely, the CST must also respond to the disclosed supervision and treatment violation behavior with an emphasis on addressing criminogenic needs and target behaviors. The goal is to increase the probability of behavior change through responding to all behaviors. (See Section 5.050 - Promoting and Monitoring Behavioral Change.)

¹¹³ Grubin, D. (2008). The case for polygraph testing of sex offenders. *Legal and Criminological Psychology*, 13, 117-189.

- 5.651 The treatment provider and supervising officer shall review the results of the polygraph exam report with the offender within the context of a treatment or supervision session, or a formal case staffing, if necessary (see Section 6.163 for more information). The treatment provider and supervising officer shall not provide a copy of the polygraph exam report to the offender for their personal use.

Discussion: Treatment providers and supervision officers should be aware that when reviewing the polygraph exam report with the offender, showing the section of the report on the specific test questions and results may impact the validity of future exams for the offender. This limitation does not include the pre- and post-test interview information of the report, which the treatment provider and supervision officer can share with the offender as needed. However, CST members should consider sharing the test questions and results in a different method rather than showing the offender the actual polygraph exam report section (e.g. going over the test questions and results verbally, or writing out the results on a separate piece of paper).

- 5.652 When there are discrepancies between offender self-report and disclosure statements in the polygraph exam report, the supervising officer or treatment provider should contact the polygraph examiner in order to address the discrepancy. If necessary, the supervising officer or treatment provider can request that the polygraph examiner review the video recording and/or provide them with a copy of the video recording of the polygraph exam to verify disclosures. The supervising officer and therapist should discuss the results of the review and then meet with the offender to resolve the discrepancy (see Section 6.033 for more information). Following completion of the review, the CST shall return or destroy the video recording if requested by the polygraph examiner.

Discussion: While the offender cannot obtain a copy of the video directly, the supervising officer or therapist can obtain a copy of the video to review with the offender if the offender identifies a discrepancy in disclosure. In such a circumstance, a similar process should occur as above.

- 5.653 The supervising officer or treatment provider should request a polygraph Quality Control Review if there are concerns about the results of a polygraph exam(s) that cannot be resolved through consultation with the polygraph examiner. The circumstances for initiating a Quality Control Review and the process to conduct the Review are currently discussed in Section 6.171.
- 5.655 After consultation with the polygraph examiner, the CST may determine it not to be suitable that a follow-up polygraph examination be based solely on a deceptive or inconclusive polygraph exam. The CST shall determine if they can identify a specific area of concern related to follow-up testing. The CST shall consider if there are alternate methods to obtain the information being sought. When alternate methods exist to obtain the needed information, the CST shall use those methods when available. If it is determined that a follow-up test is required, the CST has discretion to refer the offender to a different polygraph examiner for follow-up testing. When a different polygraph examiner is used for follow-up testing, the new examiner shall be given a copy of the prior examination. In addition, the new examiner may speak with the original examiner, if necessary. (See Section 7.000 for requirements related to information sharing.)

Discussion: Providing copies of the prior polygraph exam report and speaking with the prior polygraph examiner, if needed, will allow any necessary information to be supplied to the new examiner by the original examiner in order to complete an accurate and thorough re-examination.

- 5.660 If the supervising officer receives information that an offender is not in compliance with supervision following completion of treatment or while the offender is in aftercare, the supervising officer should determine the appropriate methods of assessing the information. The supervising officer should also consider the individual risk and protective factors of the offender and the nature of the information being sought. If it is determined that a polygraph exam is the most appropriate way to verify compliance, the supervising officer should consult with the polygraph examiner prior to the polygraph exam. The polygraph examiner will then determine which type of test should be conducted to assist in obtaining the information sought.

Discussion: When it is determined that a polygraph is required in these circumstances, the frequency of testing must follow the guidelines and timeframes specified in Section 6.013 (i.e., questions asked on maintenance exams should cover the previous nine (9) months and monitoring exams the previous year).

- 5.665 Once an offender has successfully completed treatment, the supervising officer will have the discretion to determine the frequency of polygraph examinations. If the offender remains compliant with supervision conditions, the supervising officer may remove any requirement for polygraph testing.

Discussion: Discretion to determine the frequency of testing does not imply that frequency of polygraph testing can be increased beyond the recommendations in Section 6.013. The ability to no longer require polygraph examination is for offenders who have successfully completed treatment and are compliant with supervision. If there is evidence of non-compliance or the offender has demonstrated an increased risk to re-offend, then the supervising officer may determine that a polygraph is needed. The supervising officer should consult with the polygraph examiner to determine the appropriate timeframes for testing with the intention of maintaining consistent fidelity for polygraph testing (see Section 6.000).

5.700 Contact with Victims, Children and At-Risk Adults

5.700 Sex Offenders' Contact with Victims, Minor Children, and Vulnerable Adult Populations

The highest priority of these Standards and Guidelines is to maximize community safety through the effective delivery of quality evaluation, treatment and management of sex offenders. To maximize community safety, safety plans need to be developed. Care should be taken to limit the offender's access to places and groups where he or she has a history of accessing victims (e.g. - bars, clubs, singles groups, senior centers, medical care facilities, campuses, etc.)

This section of the Standards and Guidelines outlines the SOMB protocols regarding an offender being approved by the CST to have contact with victims, minor children and vulnerable populations. This section also provides guidance regarding the approved community support and supervisor process, as well as procedures for victim and secondary victim clarification, and family reunification when appropriate. Given that risk is dynamic, the assessment of risk is an on-going process. When considering contact with any of these vulnerable populations, time in treatment and under supervision enhances the CST's ability to make informed decisions.

Sex offenders supervised by the criminal justice system may have more extensive sex offending histories than is generally identified in their official records.¹¹⁴ (For example, an offender convicted of sexually assaultive/abusive behavior toward a child may later reveal to his treatment team that the offender also sexually assaulted an incapacitated adult.) Sexual offending is a significantly under reported crime.¹¹⁵ Minor children are particularly vulnerable and unlikely to report or re-report abuse.¹¹⁶ Domestic violence also has a negative impact on children,¹¹⁷ and it is important the CST assess for domestic violence dynamics when considering contact and approved supervisors.

5.715 Definitions

- A. **Approved Community Support Person (ACSP)** is a person who may support the offender in approved activities that do not involve contact for the purpose of interacting with a specific minor child(ren). This person is an individual who has met the criteria described in 5.790 through 5.793 and has been approved by the CST.
- B. **Approved Supervisors (AS)** are adults who have been approved by the CST to supervise contact between a client and a specified minor, victim or vulnerable person. This person is an individual who has met the criteria described in 5.780 through 5.786 and has been approved by the CST.
- C. **Incidental Contact** with minor children involves contact with children as a result of regular or routine CST approved community access (e.g. - grocery store, bank, movies, sporting events, etc.). In such circumstances, the offender is not initiating contact with children or developing relationships with children. The offender does write and obtain approved safety plans for how to minimize and avoid interactions with children. Incidental contact can become unapproved purposeful contact if the offender does not take steps to avoid any additional interaction with children in these circumstances.

Discussion: There may be occasions when incidental contact with minors or vulnerable populations will be planned for and approved by the CST via safety planning (e.g. - employment, social activities and other approved ongoing activities).

- D. **Own Minor Child** is a child under the age of 18 with whom the offender has a parental role.
- E. **Parental Role** is an established and on-going position of authority with routine primary caretaking responsibilities for a child(ren) not limited by legal, biological or marital status.
- F. **Positive Support Person** is a person who provides positive support for behavior change, who has verified disclosure and been approved by the CST. This can be a peer who has successfully progressed within sex offense-specific treatment and supervision. (See Section 5.500 Role of Family Members and Natural Supports within the Team).
- G. **Purposeful Contact** refers to any form of interaction with a victim, child or vulnerable person when the offender initiates the interaction and fails to minimize or avoid the incidental contact. This contact includes, but is not limited to, the following:
 - 1. Having physical contact, face to face, or any verbal or non-verbal contact;
 - 2. Being in a residence;
 - 3. Being in a vehicle;

G. A., von Eye, A., & Levendosky, A. A. (2009). Resilience among children exposed to domestic violence: The role of risk and protective factors. *Child Development, 80*(2), 562-577.

4. Participating in visitation of any kind;
5. Initiating correspondence through a third party including, but not limited to: written, electronic, telephone contact, voice messages, text messaging, e-mail, computer communication, correspondence through any social networking sites (including, by way of example, but not limited to Twitter, Facebook, Snapchat, and Instagram), or gifts;
6. This standard does not preclude conversations with a person about a child as long as that communication does not attempt to communicate with the child through that person;
7. Going to or loitering near places used primarily by minor children as defined by the CST; or
8. Entering the premises, traveling past or loitering near any of the victims' residences, schools, day cares, places of worship or places of employment.

In extremely rare circumstances, an offender may have purposeful contact with a minor child or vulnerable person (without prior approval) based on an eminent danger to the child or vulnerable person. The CST should consider the context for this unapproved purposeful contact in the decision making related to addressing the violation of the contact prohibition.

H. **Vulnerable Adult** populations are individuals who are less able to protect themselves because of diminished capacity due to age or cognitive capacity or are subject to someone in a position of trust.

5.720 Sex Offenders and Contact with Minor Children

The risk for a sex offender's potential contact with minor children should be carefully assessed due to the offender's documented history of illegal sexual behavior and due to the fact that children are vulnerable to being sexually abused.¹¹⁸ The offender can mitigate this risk through successful participation in treatment, which is difficult and takes time. Consequently, decisions regarding minor child contact should be made based on all available clinical indicators.¹¹⁹

Currently, five pathways exist that enable an offender to have contact with minor child(ren):

- A. A Court or Parole Board has not prohibited contact with an offender's own non-victim minor child(ren) (See Appendix G.);

¹¹⁸ Statistics About Sexual Violence (2015). National Sexual Violence Resource Center: Info & Stats for Journalist.

¹¹⁹ Such indicators may include, but are not limited to, interviews, quality of treatment participation, polygraph examination results and disclosures, scores on dynamic risk assessments, psychological evaluation results, behavioral observations, and collateral reports. These indicators should thoroughly inform decisions pertaining to an offender's progress in treatment, activities in the community, and contact with potentially vulnerable persons.

- B. The offender completes a Child Contact Screening,¹²⁰ the conclusions support contact between the offender and an own non-victim minor child(ren) and the CST approves such contact;
- C. The CST determines that the offender has made sufficient progress and has achieved the criteria established in Section 5.735 in order to be approved for contact with an offender's own non-victim minor child(ren) or any other non-victim minor child(ren);
- D. The offender has successfully completed the clarification process with the victim and the CST has approved contact; or
- E. When Young Adult Modification Protocol (See Appendix C) is in place for an offender the CST may approve contact with non-victim minor child(ren).

Discussion: The only pathways for an offender to have contact with children other than an own non-victim minor child is to meet Section 5.740 criteria or through Young Adult Modification Protocol.

When contact is not prohibited by the Court or Parole Board, the supervision officer cannot restrict or modify contact without a subsequent order by the Court or Parole Board. In such circumstances, treatment providers may choose whether to provide treatment while the offender has contact with an own non-victim minor child(ren), the offender forgoes such contact, or the treatment provider may decline to offer treatment while contact is allowed. Contact with other minor children, including those in the extended family and unrelated children, shall be prohibited until the CST determines otherwise, pursuant to the criteria set forth in these *Standards and Guidelines*. Additionally, if contact with an offender's own minor child is prohibited by the Court or Parole Board, the prohibition shall remain in place until the CST determines that the offender has met the conditions for contact and the Court or Parole Board order has been modified to allow the CST approved contact.

When an offender's own child is the victim of the offender's sexually abusive behavior and reunification is the goal, initial contact shall be via the clarification process and occur pursuant to Section 5.740. Exceptions may be appropriate pursuant to Section 5.760 Circumstances under which Criteria for Contact May be Waived.

Finally, in some instances, contact may not be approved due to safety concerns for the minor children. Such circumstances are further detailed in Section 5.725.

5.725 Exclusionary Criteria for Any Form of Minor Child Contact

- A. Except as provided in Part B below, the offender is not eligible for any type of contact with minor children when there is a clinical diagnosis by an approved evaluator or treatment provider of:
 - 1. Pedophilia - Exclusive type per the most current version of the Diagnostic and Statistical Manual of Mental Disorders (DSM);

¹²⁰ Additional information regarding the Child Contact Screening is included in Section 5.730.

Discussion: When there is a diagnosis of pedophilia or a diagnosis of a history of pedophilia, the evaluator should refer to the current version of the DSM to ensure that the diagnosis is accurate prior to excluding the offender from contact with a minor child or from participating in the CCS process.

OR

2. Psychopathy or personality disorder as defined by the Psychopathy Checklist Revised (PCL-R) with a score of 30 or higher or per the Millon Clinical Multi-phasic Inventory (MCMI) with a score of 85 or more on each of the following scales: Narcissistic, Antisocial and Paranoid;

OR

3. Sexual sadism, as defined in the most current version of the DSM and/or via any standardized sadism assessment instrument.
- B. Contact may be considered by the CST for offenders who meet the above exclusionary criteria in the following circumstances:

1. There may be instances when an offender meets the exclusionary criteria and a Court or Parole Board has not prohibited or restricted contact between an offender and his own minor child.

The CST should continually assess such contact and determine if information indicates that such contact is contraindicated due to increased risk of the offender to the child. Concerns may also exist related to the effective treatment of the offender within the context of a Court or Parole Board Order allowing contact when one or more of the exclusionary criteria are diagnosed. In such cases, a Court or Parole Board Order is needed to preclude such contact. Therefore, the treatment provider shall communicate such information to the supervising officer. If the CST is in agreement, then such information should be presented to the Court or Parole Board pursuant to local procedures.

2. The offender no longer meets the clinical diagnosis associated with one of the exclusionary criteria after previously having received this diagnosis.
3. The offender is nearing the end of the period of supervision and treatment, and the CST determines that monitoring the initial contact prior to the end of Court or Parole Board jurisdiction would be in the best interest of the child. (See Section 5.735 regarding child, guardian position on having contact).

5.730 Child Contact Screen (with own minor child)

The Child Contact Screen (CCS) is a tool to assist teams in decision making regarding a client's contact with their own children. A Court/Parole Board order is not necessary for a CCS to occur, although at times it may be ordered. The CCS is an alternative to criteria established in

5.700 that details what required treatment accomplishments prior to a client having contact with an own child. A CCS has the potential to expedite a client's ability to have contact with their own children prior to those treatment accomplishments occurring. This can occur when the client meets the criteria for the screening, results indicate contact is appropriate, and teams adopt those results.

When the following circumstances exist, a Child Contact Screening (CCS) may be initiated to assess the appropriateness of a client's contact with his/her own minor child(ren) (see definition in 5.710):

- A. The client does not meet any of the exclusionary criteria in 5.725;
- B. The client does not meet any of the disqualifiers in 5.733;
- C. The client does not have two or more pre-screen factors in 5.734;
- D. The client wants contact with his/her own minor child(ren) as defined in 5.710; and
- E. The client does not have a history of victimizing any of his/her own minor child(ren), regardless of the victim's age, as substantiated by criminal or civil court history or by self-report.

A CCS must be conducted in conjunction with or after a sex offense specific-evaluation (SOSE) is completed and should be included as an addendum to the SOSE. A CCS may be conducted after a plea has been entered, after conviction, during incarceration, or upon acceptance of an Interstate Compact case, and shall be completed by an SOMB approved evaluator who is also approved by the SOMB to conduct CCSs. Contact with a client's own minor child(ren) shall be prohibited prior to, and during, the sex offense-specific evaluation unless such contact is not prohibited or restricted by the Court/Parole Board. When completed pre-plea, the CCS shall be completed consistent with these *Standards and Guidelines*.

After the pre-screen is completed and it is determined the client qualifies for a CCS, the evaluator shall complete all components of the CCS as indicated in 5.734. A recommendation regarding the client's appropriateness for contact with his/her own minor child(ren) cannot be made until a CCS has been completed and a CST has been convened. The completed CCS shall contain recommendations for the level and type of contact, if any. Contact is ultimately determined by the CST, unless contact is currently not prohibited or restricted by the Court/Parole Board. It is important to acknowledge that risk levels can change and contact must be continually assessed (see Section 5.736) and revised as necessary throughout the period of criminal justice supervision.

Discussion: Though clients often desire to undergo a CCS as soon as possible, the SOMB recognizes that the accuracy of assessing a client's appropriateness for contact with his/her minor child(ren) increases with the duration that a client is engaged in treatment and supervision.

Discussion: The SOMB recognizes that in cases involving the county human or social service agency, where a criminal case has not been filed, it may be useful to conduct an evaluation

similar to a CCS in conjunction with a sex offense-specific evaluation in order to make informed decisions regarding a client's contact with his/her own minor child(ren). This standard is not intended to preclude that from occurring. It is important to note that while the CCS can be informative regarding contact between the client and his/her own minor child(ren), it is not designed to be an evaluation or decision-making tool for the purposes of determining custody.

5.731 Each step of the CCS process (pre-screen through recommendations) must be completed pursuant to these *Standards and Guidelines*. If the client refuses to participate in any part of the screening, the screening shall not be completed and contact shall not be permitted until further order of the Court/Parole Board or until the client has met 5.740 criteria.

5.732 Evaluators conducting CCSs shall:

- A. Be a current SOMB approved evaluator (see Section 4.500, 4.600);
- B. Shall obtain the most recent and updated information for the CCS process.

5.733 Disqualifying Criteria for A Child Contact Screening:

If a client meets the following criteria, they are disqualified from participating in a Child Contact Screening and **must** meet 5.735 criteria prior to approval for contact with his/her own child(ren), unless such contact is not prohibited or restricted by the Court/Parole Board. Disqualifying criteria includes:

- A. If a client meets the exclusionary criteria for contact with a minor child as discussed in Section 5.725; or
- B. If a client presents with a current diagnosis of Pedophilic Disorder - Non-Exclusive Type (per current version of the DSM) they are disqualified from participating.

Discussion: When there is a diagnosis of pedophilia or a diagnosis of a history of pedophilia, the evaluator should refer to the current version of the DSM to ensure that the diagnosis is accurate prior to excluding the client from contact with his/her own minor child(ren) or from participating in the CCS process.

5.734 Child Contact Screen Process

A. Pre-Screen

The pre-screen process must be fully completed and verified prior to moving forward with the instrument. If information remains unverified, the evaluator shall suspend the Child Contact Screening until circumstances allow for a complete pre-screen to occur.

CCS Pre-Screen Chart (If no Exclusionary criteria)	
PRE-SCREEN FACTORS	PRE-SCREEN DATA SOURCES
If <u>2 or more factors</u> indicated, ineligible for CCS and must meet criteria in 5.740 to have minor child contact	Evaluation Procedures or Documentation
Adult ¹²¹ history of illegal sexual behavior with child(ren) age 12 or younger ¹²²	Self-report ¹²³ Criminal history Substantiated civil court history
Three or more unlawful sexual behaviors	Self-report Collateral Criminal history (conviction, factual basis, or plea agreement) Substantiated civil court history
Sexual interest or arousal to prepubescent Children	Valid baseline or initial PPG or VT ¹²⁴ Self-report Criminal history of child pornography ¹²⁵
Unresolved CCS polygraph*	CCS polygraph

* For offenders who refuse to answer incriminating sexual offense history questions, including incriminating sexual offense history polygraph questions, providers shall refer to Standard 3.160 I. 2 to determine how to respond.

B. Child Contact Screen

<u>CHILD CONTACT SCREENING</u>		
<u>Required Areas of Evaluation</u>	<u>Risk Factors</u>	<u>Evaluation Procedures Key:</u> <ul style="list-style-type: none"> • <u>Required</u> ○ <u>Optional</u>

¹²¹ Adult is defined as 18 years old or older

¹²² The age of 12 or younger is based on the distinction between pubescent and pre-pubescent development stages. There is disagreement in the current research regarding the onset of puberty, and the SOMB recognizes the limitations of defining the criteria based on a specific age.

¹²³ Admission made during polygraph assessments are considered self-report

¹²⁴ Tests that are inconclusive or show no response (flat line) are not valid and must be repeated or tested with the other procedures

¹²⁵ Conviction or documentation of history of seeking child pornography

5.735 Criteria for CST Approval of Supervised Contact with Secondary and Non-Victim Minor Children

This section applies for an offender to have approved, purposeful, supervised contact with a minor child who is either:

- Not the offender's own child (if the primary residential custodian is in support of the contact).
- The offender's own child where the Court or Parole Board has prohibited contact. A Court or Parole Board Order would be necessary to allow contact.
- The offender's own child where the Court or Parole Board has not prohibited contact, but the offender foregoes such contact.

At the time when considering contact with any specific minor child, the CST shall consider the child's best interest. The CST should ascertain whether the primary residential parent or legal guardian(s) is supportive of the contact and aware of the offense (i.e., a third party disclosure). The following criteria are not intended in situations when the offender may have incidental contact with a child in the community. (See Section 5.715 for definition of incidental contact). This section applies when the CST and offender are ready for approved, supervised purposeful contact with a child.

Discussion: The CST should determine if a Court or Parole Board Order prohibiting contact exists. If such an order exists, the existing order must be modified to allow for contact.

Discussion: The Court's order to eliminate the prohibition for contact with the offender's own minor child does not override existing court orders specific to parenting issues or custodial arrangements. If the primary residential parent or legal guardian opposes contact, remedies must be pursued through the appropriate court of jurisdiction.

¹³⁷ For the purposes of these *Standards and Guidelines*, primary residential custodian is the parent whom the child resides with and who is exercising daily parenting responsibility for the child.

In order to have contact with a child under the three circumstances identified above, the primary residential parent or legal guardian(s) of the child shall be informed of the offense. In addition, the child with whom the offender is going to have contact shall also be informed of the offense, with parental consent, when deemed appropriate by the CST based on the child's developmental level and the intended frequency and extent of the interaction with the offender (See J below for additional guidance). Treatment providers, in conjunction with the CST, shall assess the offender's progress and/or risk regarding the following criteria:

- A. The offender accepts full responsibility, without victim blaming, for the offending behavior.
- B. The offender is able to demonstrate understanding of the factors that led to the offending behavior and is able to establish a CST approved plan for managing risk factors to re-offense.
- C. The offender has demonstrated accountability and honesty to the satisfaction of the CST either through the sexual history polygraph process or by other clinical indicators¹³⁸ determined by the CST. (See Section 6.000). For offenders who refuse to answer incriminating sexual offense history questions, including incriminating sexual offense history polygraph questions, providers shall refer to Standard 3.160(B)(3)(a) to determine how to respond. (For additional information on the use of the polygraph, see Section 5.600).
- D. The last maintenance polygraph and other clinical indicators have not raised concerns of the CST related to risk.
- E. The offender is able to identify and discuss individual risk factors and is able to actively manage these factors and does not exhibit any significant risk related behavior(s).
- F. The offender does not have new disclosures of high risk behavior that would put a child at risk.
- G. The offender consistently demonstrates the following:
 1. The ability to manage all risk-related sexual arousal, sexual interest and/or behavior patterns through the use of cognitive and behavioral interventions as evidenced by the offender's Plethysmograph or Visual Time (VT) results.
 2. An understanding of the impact of the abuse on the victim(s) and the victim's family, the offender's family, and the community, as evidenced by behavioral accountability and self-regulation.
 3. An understanding of and willingness to respect the minor child's verbal, non-verbal, and physical and emotional boundaries and need for privacy.

¹³⁸ Clinical indicators can be anything that provides information about a client's overall clinical presentation, which may include but is not limited to interviews, quality of treatment participation, polygraph examination results and disclosures, scores on dynamic risk assessments, psychological evaluation, behavioral observations, and collateral reports.

- H. The offender is willing to accept limits or prohibitions on contact as established by the CST. The offender is willing to plan for contact, to develop and utilize an approved safety plan for all contact, to accept supervision during contacts, and to terminate contact when directed by the CST, the Approved Supervisor, or the minor child or the primary residential parent or legal guardian(s) of the minor child. The safety plan shall be approved in advance and in writing by the CST and signed by the offender.
- I. The offender consistently demonstrates compliance with supervision conditions and demonstrates satisfactory progress in treatment.
- J. When determined necessary by the CST and when developmentally appropriate, the offender will satisfactorily participate in a treatment session¹³⁹ with the non-victim minor child, (see Discussion below). The purpose of the session is to discuss behaviors relevant to the offender's risk. This discussion should include, but is not limited to, the following topics: Acknowledgment of engaging in abusive behaviors, identification of boundaries and limits of contact, rules for the offender regarding contact, specific information the minor child may need to know relevant to safety, who the approved supervisor is, an acknowledgment that it is okay for the minor child to communicate anything that makes them uncomfortable with the contact, and any additional information the CST determines is appropriate and necessary.

Discussion: For example, there may be times when an offender is going to have limited ongoing contact with a child (e.g., family holiday gatherings where the offender is going to interact with a minor child relative relatively infrequently and have no further contact outside of these gatherings, etc.). In such instances, the CST may use discretion in whether to require a treatment session between the offender and the non-victim minor child.

- K. The offender is willing to accept limits or prohibitions on contact as established by the CST with input from the minor child, minor child's primary residential parent or legal guardian(s), or minor child's therapist and will put the minor child's needs first.
- L. The CST should review and approve in advance any time an offender wants to give an item to a minor child such as a gift, card, picture, etc.

For contact with minor children who are secondary victims (see Definitions Section), treatment providers, in conjunction with the CST, shall assess the following additional criteria when deciding upon contact with a specific minor child:

- M. Assess whether the contact could have a positive or negative impact on the secondary victim child. For children who are capable of communicating an opinion regarding contact, the CST shall identify the wishes of the child either directly or indirectly through other qualified professionals. Contact with secondary victim minor children should not be allowed against the child's wishes. Please see Appendix E, Guidance

¹³⁹ A treatment session may include a session at the offender treatment provider's office, the child's therapist's office, a location in the community or any other place that will contribute to the child's comfort level with the interaction that is to take place.

Regarding Victim/Family Member Readiness for Contact, Clarification, or Reunification regarding secondary victims and section 5.745 regarding additional guidance related to implementing contact, clarification and family reunification procedures.

- N. The best interests of the primary victim shall be considered in the decision to allow contact with secondary victim minor children.

Discussion: In cases of intra-familial sexual abuse, the siblings (i.e. - secondary victims), suffer impact regardless of whether or not they were aware of the abuse. The siblings may be resentful of the victim as they observe preferential treatment. This preferential treatment is an example of the offender's grooming behaviors. Secondary victims do not understand grooming. The offender may use the non-abused children as rivals against the victim for purposes of gaining the victim's compliance. Secondary victims can be resentful toward the victim for "breaking up the family."

These damaged relationships and diverse impacts of the primary and secondary victims must be thoroughly explored by the CST prior to any discussion about contact with the offender and secondary victims. The primary victim can be hurt and negatively impacted when the offender is permitted to have contact with the siblings, but contact is prohibited with the primary victim. The victim may feel blamed for the abuse and further isolated from the family. Best practice is for clarification to occur with that primary victim before contact occurs with the secondary victims.

- O. Evaluate/examine for other indications of possible sexual abuse on siblings, even if there has been no report of sexual abuse and the offender has not been charged.
- P. If available, review reports from the county Department of Human Services agencies.
- Q. Assess the readiness of the family unit for this level of contact.
- R. Consider the support system(s) of the primary and secondary victims.
- S. Assess whether the secondary victim, including the primary residential parent or legal guardian(s), needs adjunct treatment services prior to doing treatment sessions with the offender. This can help address difficult family dynamics and inform the CST in making decisions about contact.

5.736 Ongoing Assessment of Supervised Contact with Secondary Victim and Non-Victim Minor Children

The CST shall continuously assess the offender's overall risk level as well as risk factors specific to the offender. If the offender's risk level increases as verified by clinical indicators, the team shall reassess approval of contact and the contact may be modified or discontinued.

When assessing the offenders overall risk level, the CST shall consider all existing clinical indicators that provide information about a client's overall presentation. Such indicators may include, but are not limited to, interviews, quality of treatment participation, polygraph examination results and disclosures, scores on dynamic risk assessments, psychological

evaluation results, behavioral observations, and collateral reports. These indicators should thoroughly inform decisions pertaining to an offender's progress in treatment, activities in the community, and contact with potentially vulnerable adults and minor children. In addition to these indicators, the CST shall also periodically review the criteria outlined in 5.735 A-S.

There may be instances when a Court or Parole Board has not prohibited or restricted contact between an offender and his own minor child. In such cases, the CST should continually assess such contact and determine if information indicates that such contact is contraindicated due to increased risk of the offender to the child. Concerns may also exist related to the effective treatment of the offender within the context of a Court or Parole Board Order allowing contact. In such cases, a Court or Parole Board Order is needed to preclude such contact. Therefore, the treatment provider shall communicate such information to the supervising officer. If the CST is in agreement, then such information should be presented to the Court or Parole Board pursuant to local procedures.

Discussion: Parental separation and loss is traumatic for children of all ages. Repeated separation and loss can be even more detrimental to a child's overall development. Once the relationship between an offender and a child has been re-established (or established) care should be taken to not disrupt that relationship. Stopping contact should not be used as a consequence for offender behavior because of the negative impact on the child. When safety concerns directly impacting the well-being of the specific child arise, CSTs should consider modifying contact to mitigate safety concern when clinically indicated.

5.738 Application of Sections 5.735 - 5.736 to Minors Under Age 18 and Young Adults Under age 25

The intent of Standards 5.735-5.736 is not to prohibit minor children under the purview of these *Standards and Guidelines* from having contact with pro-social peers. Therefore, sections 5.735 through 5.736 should not apply to children under age 18 who are prosecuted as adults pursuant to C.R.S. §§19-2-517 and 19-2-518, and are seeking contact with pro-social peers.

CST's working with minors who are subject to these *Standards and Guidelines* as a result of prosecution in adult court should review the SOMB *Standards and Guidelines for the Evaluation, Assessment, Treatment and Supervision of Juveniles who have Committed Sexual Offenses* and consult with SOMB-approved treatment providers and supervising officers who have experience working with juveniles who have committed a sexual offense on topics such as safety planning.

When young adults are age 18 to age 25, the CST may exempt them from specific standards via the application of the *Young Adult Modification Protocol*. (See Appendix C for additional information regarding *Young Adult Modification Protocol*.)

Discussion: Social isolation is an empirically established risk factor for juveniles who have committed a sex offense.¹⁴⁰ Prohibiting minors from all contact with non-victim, pro-social

¹⁴⁰ Hackett, S., Masson, H., Balfe, M., & Phillips, J. (2015). Short-term general recidivism risk of juvenile sex offenders: Validation of the Washington State Juvenile Court Prescreen Assessment. *International Journal of Offender Therapy and Comparative Criminology*, 57(11), 1374-1392.

minors who are peers, relatives, or otherwise relevant to their support systems solely because their case was prosecuted in adult court is without research support.

5.740 Contact, Clarification, or Reunification with Minor-Aged Victims

It is important for the CST to use caution before allowing an offender contact with a known victim. A Child Contact Screening (CCS) is prohibited as an avenue for contact with known victims (see Section 5.732 re: disqualifiers for a CCS). The rationale for using caution in these matters is based on the knowledge that while minor children are among the most vulnerable potential victims, those previously victimized by the offender remain at high risk for re-victimization in a variety of ways.¹⁴¹ This is due to the fact that the offender has already demonstrated a willingness and ability to engage in offending behavior against them, and it is highly unlikely that minor children will report further abuse.¹⁴² CST members should be aware that research indicates younger minor children and those who know the perpetrator are least likely to report abuse in the first place,¹⁴³ and that many victims whose offenders were family members indicate they would not report abuse if it recurred due to the devastating consequences they experienced upon their first report.¹⁴⁴

For these reasons, while some victims may express a desire for contact it may not actually be in their best interest. The CST must balance victim wishes with the paramount concern for victim safety. It is also important for the CST to resist pressure from an offender or victim's family regarding contact. The CST decision to allow victim contact shall be unanimous and based on consideration over a protracted period of time regarding:

- A. The best interests of the victim;
- B. Input from the victim's current or prior therapist, or in the absence of a therapist, a victim representative;
- C. Input from the child's custodial parent or legal guardian;
- D. The offender's achievement of all criteria listed in 5.735; and
- E. The presence of an Approved Supervisor (see 5.780).

Refer to Appendix B for best practice guidelines regarding victim or other family member readiness for clarification, contact, and reunification.

5.745 Victim clarification procedures¹⁴⁵

Clarification procedures outlined in this section also include information and guidance for clarification with minor aged victims and victims who are adults.

Prior to initiating clarification procedures, treatment providers should obtain topic-specific training and utilize the expertise of experienced providers, as necessary.

A. Clarification work

Clarification work is a multi-step process that shall occur in sex offense- specific treatment whether or not the process progresses to clarification sessions with the victim, and should include the following:

1. Discussion between the therapist and the offender regarding the offender's sexually abusive behaviors.
2. Discussion with the offender about the clarification process and the importance of the process being victim-centered.
3. Any significant difference between the offender's statements, the victim's statements and corroborating information about the offense/abuse shall be resolved to the satisfaction of the CST, to include the victim therapist or victim representative. The offender is able to acknowledge the victim's statements without minimizing, blaming or justifying.
4. The offender evidences empathic regard through consistent behavioral accountability including an improved understanding of: the victim's perspective; the victim's feelings; and the impact of the offender's assaultive behavior.
5. The offender is prepared to answer questions and is able to make a clear statement of accountability, and provide reasons for victim selection to remove guilt and perceived responsibility from the victim.
6. Any sexual impulses are at a manageable level and the offender can utilize cognitive and behavioral interventions to interrupt risk-related fantasies as determined by continued assessment.
7. The offender evidences decreased risk by demonstrating changes listed in Section 3.160.
8. The offender will write clarification letters to each victim using the following steps:
 - a. The SOMB approved provider shall contact the victim representative (the victim therapist involved in the case is the preferred representative) to explain the clarification process to the victim and determine if the victim wants to receive a

¹⁴⁵ DeMaio, C.M., Davis, J.L., and Smith, D.W. (2006). The use of clarification sessions in the treatment of incest victims and their families: An exploratory study. *Sexual Abuse: A Journal of Research and Treatment*, 18(1), 27-39.

clarification letter. If the victim does not want to receive a clarification letter, or if there is no identified victim, the offender is still expected to complete steps b through f.

- b. Letters should be written assuming the victim will receive the letters, regardless of whether or not the letters will actually be sent at the time the letter is written.

Discussion: Victims may request the clarification letter in the future. Therefore, the therapist should make sure the letter is dated and retain the letter as part of the treatment file per record retention requirements.

- c. Letters should be written in the offender's words and in a developmentally appropriate way that the victim can understand. It is imperative that letters are written based on the individual needs of the victim(s).
 - d. All letters shall be reviewed by a victim representative or a professional with experience in the clarification process with victims in order to provide an outside viewpoint of the letters.
 - e. Letters should be revised based on input from reviewers.
 - f. Once completed, the letter should never be sent directly by the offender to the victim. The letter shall be provided to the victim by the victim representative or another professional on the CST.
9. Mock clarification sessions with a victim representative may be a useful treatment process when the victim chooses to not participate in clarification, or clarification with the actual victim is not appropriate.

B. Clarification with the victim¹⁴⁶

The victim clarification process is designed to primarily benefit the victim. Through this process the offender accepts responsibility for the abusive behavior and clarifies that the victim has no responsibility for the offender's behavior,¹⁴⁷ which aids in helping the victim reduce self-blame and assign responsibility to the offender. The purpose of the clarification process is to address issues related to the damage done to the victim and family, grooming behaviors, and potential questions and topics for the offender to clarify to the victim.

Clarification is a process that occurs over time, and should only begin when the offender is able to self-disclose about the offending behavior. Victim participation is never required, but is important when the plan includes ongoing contact between the offender and the victim. Clarification sessions should only occur based on the direction of the victim(s), not the family or offender. Clarification is always victim-centered and based on victim need.¹⁴⁸ This process requires collaboration with a victim therapist or representative as defined in

¹⁴⁶ DeMaio et al. (2006).

¹⁴⁷ Hindman, J. (1989). *Just Before Dawn*, Alexandria Association.

¹⁴⁸¹⁴⁸Digiorgio-Miller, J. (2002). A Comprehensive Approach to Family Reunification Following Incest in an Era of Legislatively Mandated Community Notification. *Journal of Offender Rehabilitation*. Vol. 35(2), 83-91.

section 5.700. Following clarification written work, the clarification process may then progress to the offender having therapeutic interaction with the victim in the mode the victim chooses (e.g., letters, phone contact, video conferencing, or face-to-face).

Discussion: Whenever a victim has been in therapy, the victim's therapist is the preferred victim representative and should be consulted regarding the clarification process.

Discussion: The CST should determine if a court or parole order prohibiting contact exists. If such an order exists, the existing order must be modified to allow for contact, including therapeutic contact.

Secondary victims and significant persons in the victim's life are impacted by sexual offenses. Clarification with others who have been impacted by the offense may be warranted.

When conducted thoroughly utilizing a victim-centered approach, clarification provides benefits including healing and restoration to the victim and offender.

C. Criteria for Clarification Sessions

The clarification process may progress to clarification sessions between the offender and the victim when approved by the CST in consultation with the victim representative (the victim therapist involved in the case is the preferred representative) using the following criteria (Refer to Appendix B, "Guidance Regarding Victims/Family Member Readiness for Contact, Clarification, or Reunification" for further details):

Discussion: The CST should determine if a Court or Parole Order prohibiting contact exists. If such an Order exists, the existing order must be modified to allow for contact, including therapeutic contact.

1. The victim requests clarification and the victim representative concurs that the victim will benefit from clarification.
2. The primary residential parent or legal guardian(s) of the victim (if a minor) is (are) informed of and give approval for the clarification process.
3. A specific issue polygraph examination shall be employed prior to clarification sessions under the following conditions:
 - a. Significant discrepancy between the account of the offender who committed the sexual offense and the victim's description of the offense; or
 - b. To explore specific allegations or concerns that would affect the clarification process.
4. Information gained from a specific-issue polygraph may be critical to an effective victim clarification process and shall be considered when making decisions regarding victim clarification.

5. The offender is able to demonstrate the ability to manage risk-related sexual arousal, interests and behavior patterns specific to the victim.
6. Clarification sessions will be victim-centered and occur at a location or via a medium chosen by or acceptable to the victim. CST's may consider alternate forms of technology such as, video conferencing, on-line video communication, live or pre-recorded video presentations, etc. Ground rules should be established for a clarification session with input from the victim, which may occur via the Victim Representative on the CST.

5.748 Contact with victims who are currently under the age of 18

Contact **with a victim** is first initiated through the clarification process. Ongoing contact after clarification shall only occur at the request of the victim. Offenders must meet all requirements outlined in section 5.735, 5.740 and 5.745 prior to being allowed victim contact. Once those requirements have been met, and upon agreement of the CST, the offender may progress to contact outside of a therapeutic setting.

The CST shall:

- A. Seek input from the victim's therapist or a victim representative regarding such contact;
- B. Ensure all contact occurs in the presence of an Approved Supervisor (see 5.780), or professional member of the CST;
- C. Ensure that the wishes of the victim as well as the recommendations of the victim representative support all the contact that occurs. An offender's therapist shall not initiate offender contact with a victim absent professional victim representative support;
- D. Support the victim's wishes regarding contact with the offender to the extent that it is consistent with the victim's safety and well-being;

Discussion: A common dynamic that may occur in families is direct or indirect influence or pressure on the victim to have contact with the offender. A third party professional assessment regarding victim needs may be warranted prior to contact with the offender.

- E. Arrange contact in a manner that places victim safety first. When assessing safety, psychological and physical well-being shall be considered;
- F. Determine what types of contact are permissible based on offender risk factors and other considerations. The CST shall consider placing more boundaries and limitations on types of contact with known victims than may be required of the same offender with non-victim minor children. Contact possibilities occur on a continuum including written, telephone, and in-person and from non-physical to physical. The CST shall specify what is approved for the offender with each victim;

- G. Closely supervise or monitor the contact process, including requiring that any concerns or rule violations be reported to the CST; and
- H. Ensure the ongoing assessment of the victim's emotional, psychological and physical safety, and will immediately terminate contact if any aspect of the victim's safety is in jeopardy.

5.750 Unsupervised Contact with Offender's own Minor Child(ren) who are not Victims and are Currently Under the Age of 18

This section does not apply when contact is not prohibited by the Court or Parole Board.

Discussion: The CST should determine if a Court or Parole Order prohibiting contact exists. If such an Order exists, the existing order must be modified to allow for contact, including therapeutic contact.

The following criteria for unsupervised contact with own minor child(ren) should also be utilized by the CST when considering a CCS recommendation for contact.

- A. Offenders being considered for unsupervised contact with their own minor child(ren) shall:
 - 1. Not meet any of the Exclusionary Criteria as referenced earlier in Standard 5.725;
 - 2. Have had ongoing supervised contact with their own minor child(ren);
 - 3. Continue to be assessed by the CST to have demonstrated compliance with all applicable standards in Sections 5.735 through 5.748 as assessed by any required maintenance/monitoring polygraph examination (see Section 6.000), and other clinical indicators;¹⁴⁹
 - 4. Have demonstrated that supervised visits have been sufficient in quality, frequency, and duration as determined by the CST; and
 - 5. Have demonstrated satisfactory progress in treatment and consistent compliance with supervision and treatment conditions.
- B. The criteria listed below shall be used by the CST when considering granting an offender unsupervised contact with his/her own minor child(ren). Offenders shall not be allowed to have unsupervised contact with minor child(ren) who are not their own minor child.
 - 1. Where available and deemed appropriate based on the child's developmental level, the CST shall support the minor child's wishes when the minor child does not want to have unsupervised contact with the offender. In cases when the minor child wants unsupervised contact, the CST shall prioritize the best interest of the minor child including physical, psychological and emotional safety;

¹⁴⁹ Clinical indicators can be anything that provides information about a client's overall clinical presentation, which may include but is not limited to interviews, quality of treatment participating, polygraph examination results, scores on dynamic risk assessments, psychological evaluation, behavioral observations, and collateral reports.

2. When there is a therapist working with the minor child, the therapist shall be consulted in the decision to grant unsupervised visitation;
3. If no longer in therapy, the CST should attempt to consult with the therapist who previously treated the minor child to discuss general issues surrounding unsupervised contact;
4. The CST shall ensure that the offender has an approved safety plan regarding the minor child involved;
5. The CST shall consider input from the primary residential parent or legal guardian when making any decision regarding any unsupervised contact with the offender's own minor child(ren). In such instances, the CST shall seek ongoing input from the custodial parent or legal guardian to ensure that contact is not posing undue risk to the child(ren). If such risk is identified, a subsequent Court or Parole Board Order is needed to preclude such contact. If the CST is in agreement, then such information should be presented to the Court or Parole Board pursuant to local procedures.
6. The CST shall assess the suitability of unsupervised contact while such contact is taking place. If risk factors indicate unsupervised contact is no longer safe, the CST will need to seek modification of the court order if it currently allows unrestricted contact with the minor child(ren).
7. The CST shall thoroughly document reasons for all decisions made regarding an offender's unsupervised contact with own minor child(ren).
8. Unsupervised contact shall never be allowed for a sex offender diagnosed with any type of pedophilia (per current version of DSM) or with an established and ongoing pattern of risk-related sexual arousal, interest and behavior toward minor children (see Section 5.725.)

Discussion: An established pattern is determined to exist when an offender has shown illegal, abusive or harmful sexual interest/arousal to minors via pattern of offending, self-report by the offender, or assessment of sexual interest/arousal over a period of time.

When contact with the offender's own child(ren) has not been prohibited or restricted, there may also be instances when information indicates that such contact is contraindicated due to increased risk of the offender to the child. To restrict or preclude contact, a subsequent Court or Parole Board Order is needed. Therefore, the treatment provider shall communicate such information to the supervising officer. If the CST is in agreement, then such information should be presented to the Court/Parole Board pursuant to local procedures.

5.751 Unsupervised Contact with an Offender's Grandchildren who are not Victims and Currently Under the Age of 18.

Discussion: The CST should determine if a Court or Parole Board Order prohibiting contact exists. If such an Order exists, the existing order must be modified to allow for contact.

Unsupervised contact shall never be allowed for a sex offender diagnosed with any type of pedophilia (per current version of DSM) or with risk-related sexual interests or behavior patterns.

A. Offenders being considered for unsupervised contact with their non-victim minor grandchildren shall:

1. Not meet any of the Exclusionary Criteria as referenced in Standard 5.725;
2. Meet the criteria outlined in Standard 5.735 for contact with secondary and non-victim minor children;
3. Have participated in supervised contact which has been sufficient in quality, frequency and duration as determined by the CST;
4. Have had ongoing supervised contact with the grandchild(ren) and no CST concerns have risen from that contact; and
5. Have the approval and support from the custodial parent(s) or legal guardian(s) who are aware of the offender's sexual offending behavior.

B. The CST Shall:

1. Ensure that if the custodial parent or legal guardian are not the current acting approved supervisor, the treatment provider shall meet with the legal custodian or legal guardian prior to unsupervised contact occurring;
2. Continuously assess the suitability of unsupervised contact while such contact is taking place;
3. Continue to assess client compliance with treatment expectations, supervision requirements and safety planning; and
4. Thoroughly document reasons for all decisions made regarding an offender's unsupervised contact with their grandchild(ren).

5.755 Family Reunification

This section applies when the offender will be residing in the same residence with the victim or own minor non-victim child(ren). Family Reunification is defined as the offender living in the same residence with own minor child(ren).

Family reunification shall not occur for offenders who meet exclusionary criteria as outlined in Section 5.725 unless a Court/Parole Board Order does not prohibit or restrict contact by the offender with own child(ren). There may also be instances when information indicates that such contact is contraindicated due to increased risk of the offender to the child. To restrict or preclude contact, a subsequent Court/Parole Board Order is needed. Therefore, the treatment provider shall communicate such information to the supervising officer. If the CST is in agreement, then such information should be presented to the Court/Parole Board pursuant to local procedures.

Prior to considering family reunification, the offender shall have demonstrated compliance with all applicable standards in Section 5.735 (unless these criteria have been waived pursuant to the CCS), 5.740 and 5.745, and the CST shall unanimously agree that family reunification is appropriate.

Due to ongoing risk of re-offense, family reunification in cases when the offender has a history of incestuous behavior is rarely indicated.

The CST shall coordinate all efforts toward family reunification with any actively involved child protective agency.

Family reunification shall never take precedence over the safety (physical, sexual, and psychological) of any victim or the offender's own minor children. If reunification is indicated per the recommendations of the CCS or after careful consideration of the potential risks over an extended period of time, supervising officers and treatment providers in conjunction with the victim representative, shall carefully monitor the process through the conclusion of supervision. Family reunification is typically a gradual process marked by increasing contact both in terms of length of visits, and where the visits take place.

The CST shall confirm that the spouse/partner or primary caregiver is willing and able to fully support all conditions required by the CST, which includes active involvement in the offender's treatment process and any treatment in which the minor child(ren) are involved. The CST shall consider any past or present victimization by the offender of the spouse/partner or primary caregiver that would inhibit the person's ability to support the conditions necessary for family reunification. Confidentiality for a person who has been victimized, including a spouse/partner or primary caregiver, must be upheld.

5.760 Circumstances under Which Criteria May Be Waived

At the request of the victim or own minor child, there may be rare instances when the CST determines that brief contact prior to meeting criteria established in 5.740 is beneficial and appropriate. In such instances contact shall:

- Be for the benefit of the victim or minor child;
- Have a specific purpose;
- Be supervised;
- Goal oriented; and
- Be limited to no more than the amount of incidences of contact necessary to achieve the identified purpose and goal(s), which is typically no more than 2 sessions.

Contact may include letters, telephone contact or face to face interaction. Such contact must be well planned and facilitated by the offender's therapist and include the victim or minor child's therapist, or victim representative. Care shall be taken to plan for the safety of the victim or minor child. When no therapist for the own minor child is involved, the team shall seek the input from the Victim Representative.

Discussion: The CST should determine if a Court/Parole Board order prohibiting contact exists. If such an Order exists, the existing order must be modified to allow for contact. Such a task should not be placed on the victim.

Discussion: The removal of an offender from the family home is usually immediate. Children often do not have a chance to say good-bye and struggle with the sudden and unexplained loss of their caregiver or family member's removal from the home. It may benefit the child(ren) of the offender to participate in a therapeutic session for the offender to explain their absence (in terms developmentally appropriate for the child(ren)). In such cases therapists shall ensure the offender is capable of explaining the absence in a manner that does not portray them as a victim or imply responsibility for the absence rests with the victim or other family members. Teams should also consider if, on an ongoing basis, allowing the child(ren) to write letters to the offender (through the offender's therapist) will assist the child(ren) in their grief and loss. Such communication may also benefit the offender to understand the impact of their behavior on the minor child(ren). In such cases, the child(ren) will need to understand that the offender will not be able to respond to child/victim initiated communication until approved by the CST.

5.770 Contact with Adult Victims

The CST shall discuss and implement the appropriate clarification procedures, (see section 5.740) applicable and specific to the victim's needs. The CST shall ensure that the adult victim's desires and best interests are adequately represented throughout the decision-making process. When making a determination about contact with an adult victim, the CST must be attentive to the possibility of ongoing enmeshment and abuse of power between the offender and the person victimized. Factors specific to the offender and the relationship to the victim shall be considered, such as domestic violence, harassment and stalking.

If contact is approved, the CST shall specify what type of contact the offender is approved to have with each adult victim. The CST shall determine the types of contact that are permissible based on offender and victim dynamics, known risk factors and other considerations including the type of contact the victim is requesting. Contact possibilities occur on a continuum including written, telephone, and in-person, (therapeutic or otherwise), and from non-physical to physical.

Discussion: The CST should determine if a Court or Parole Board Order prohibiting contact exists. If such an Order exists, the existing order must be modified to allow for contact. Such a task should not be placed on the victim.

5.775 Contact with Vulnerable Adult Populations

Treatment providers and other members of the CST shall not allow offenders to have unsupervised contact with individuals who are at particular risk for victimization. Vulnerable

persons include individuals at risk for victimization due to diminished mental status, disability, incapacitation or victimization related to domestic violence or sexual assault.

Safety planning should identify potentially vulnerable populations and plan accordingly in relation to what is known of the offender's sexually offending behavior, sexual interests and arousal, and additional client-specific risk factors. The CST shall also take into consideration those individuals whose decision-making and self-protection skills are compromised due to mental health issues, substance misuse, physical limitations, or developmental or intellectual concerns.

5.780 *Approved Supervisor*

Approved Supervisors (AS) are adults who have been approved by the CST to supervise contact between a client and a specified minor, victim or vulnerable adult.

5.781 *Qualifications of an Approved Supervisor*

Prior to approving a person to be an Approved Supervisor, the applicant will meet the following qualifications:

- A. Completes a criminal history background check (see Appendix P for additional information);
- B. Understands the nature of an existing disability and how it impacts the risk, needs and responsibility of the offender;
- C. Willing to discuss any personal victimization history to assess whether issues exist that would impede their role as an Approved Supervisor;
- D. Agrees to participate in and support the intervention efforts of the CST;
- E. Willing to maintain open communication with the CST and inform the CST about concerning behavior;
- F. Agrees that protecting the minor child, victim or vulnerable person is the highest priority;
- G. Recognizes the offender's responsibility for the seriousness of the sexually abusive behavior;
- H. Demonstrates empathy for victims and acknowledges the impact sexual abuse has on victims; and
- I. Empowers the offender to progress in treatment.

5.782 *Disqualifications of an Approved Supervisor*

Prior to allowing a person to be an Approved Supervisor, the person must voluntarily agree to all conditions and qualifications as outlined above in 5.781.

Approved Supervisor status is conditional and may be modified or removed if one of the following conditions exists or arises:

- A. The Approved Supervisor is currently under the jurisdiction of any court or criminal justice agency for a matter that the CST determines could impact one's capacity to safely serve as an Approved Supervisor.
- B. A conviction for child abuse or neglect, or for unlawful sexual behavior as defined by SOMB Statute or a founded sexual abuse assessment or dependency case that has been filed in civil court. If the Approved Supervisor has been investigated for unlawful sexual behavior, child abuse, or neglect they must present information requested by the CST so that the CST may consider the impact on the capacity to serve as an Approved Supervisor.

Discussion: In rare circumstances, the CST may choose to make an exception to the prohibition about a misdemeanor child abuse conviction. The reasons for this exception should be made by the unanimous agreement of the CST and documented in writing.

- C. If the Approved Supervisor demonstrates that they have developed a significant cognitive, mental health, substance abuse, health related or physical impairment that inhibits their ability to be an Approved Supervisor, the CST may request that the person remove themselves from serving in that capacity or modify their role.
- D. A significant power differential exists in the relationship between the offender and the proposed Approved Supervisor and that power differential is likely to inhibit the person's ability to fulfill the responsibilities of the role (e.g., adult child of the offender).
- E. Confidentiality for a client must be upheld.
- F. Past or present victimization by the client of the potential Approved Supervisor that would inhibit the person's ability to fulfill the responsibilities of the role. Confidentiality for a victim in this situation must be upheld.

5.783 At any time, the status of an Approved Supervisor can be removed or modified based on the following events or circumstances:

- A. The Approved Supervisor fails to comply with and adhere to the conditions and qualifications as listed in Section 5.781. Failure to maintain compliance will result in the removal or modification of Approved Supervisor status.
- B. An Approved Supervisor can request to the CST that they be removed from such status at any time and of their own volition as this is a voluntary status.
- C. The CST may remove a person from the role of Approved Supervisor status based upon other concerning behavior or attitudes demonstrated by the Approved Supervisor. In cases in which this occurs, the CST must be in agreement, discuss the reason for the removal of such status with the Approved Supervisor and the offender, and document the reasons for the removal of the Approved Supervisor status.

D. Failure to maintain confidentiality by the Approved Supervisor will result in removal of the Approved Supervisor status.

5.784 Treatment providers shall offer training for an Approved Supervisor. The training should be of sufficient duration for the candidate to learn, process and internalize information about the individual client's risks, needs and how they may respond to those risks and needs in their role as an Approved Supervisor.

A. At a minimum the training/education shall include:

- The offenders thorough disclosure of the offense and acceptance of all responsibility;
- The offender's sexual history disclosure to the extent deemed necessary as determined by the treatment provider;
- What constitutes sexual offending and other abusive behavior and the impact that it has on victims;
- The offender's cognitive distortions, risk factors, problematic, harmful or illegal sexual arousal patterns, pathways, grooming behaviors, Pro-Social Living Plan and an awareness that client risk factors are variable over time;
- The offender's treatment progress;
- Any offender mental health or substance misuse issues;
- Learning to identify cognitive distortions used to justify or excuse sexually abusive behavior;
- The offender's community supervision conditions, treatment contract expectations, and rules regarding the approved contact;
- The offender's requirement to provide the CST with a written safety plan for supervised contact;
- Any offender history of domestic violence and risk to a partner or to other family members; and
- The offender's potential ability to manipulate the Approved Supervisor and/or CST.

Discussion: Because this training must be specific to the client, clients are encouraged to participate in the session(s) with their Approved Supervisor.

Discussion: If an Approved Supervisor has completed the criteria as outlined in section 5.784 then the person's status should transfer to another agency. The Approved Supervisor should not have to complete additional educational requirements if they remain in good standing.

B. Providers shall require Approved Supervisors to attend education groups quarterly for a minimum of a year. After the initial year, Approved Supervisors, at a minimum, shall attend an individual session where the client and primary therapist are present, once every six months. These sessions shall be a place where concerns are discussed.

Discussion: The SOMB recognizes that providers serving clients in rural areas experience unique challenges. When limited resources exist in rural areas, the provider shall document their plan to provide training and on-going support to Approved Supervisors.

- C. Treatment providers shall have a process in place that allows for consistent communication between the Approved Supervisor and other members of the CST. Such a process could include:
- Scheduled appointments with the therapist
 - Scheduled appointments with the supervising officer
 - Written communication
 - Staffing(s)
 - Support groups
 - On-going training

5.785 Approved Supervisor Duties and Responsibilities

The treatment provider shall develop a written contract specific to the client and minor child(ren) having contact and confirm the contract is signed by the CST, the Approved Supervisor and the client. The contract shall require that the Approved Supervisor:

- A. Maintains qualifications and stays current on the knowledge and responsibilities as discussed in Standards 5.781 through 5.784, including annually providing the CST with a Colorado Bureau of Investigation generated criminal history report that incorporates CCIC/NCIC information;
- B. Shall not be under the influence of alcohol or substances which may inhibit or impair one's ability to effectively serve in the role as Approved Supervisor;
- C. Maintains confidentiality regarding known victim information;
- D. Assists client in maintaining compliance as specified by the CST;
- E. Assists the client in abiding by the approved safety plan regarding contact;
- F. Immediately terminates the visit if any aspect of the physical or emotional well-being of the child(ren) appears compromised or if the safety plan is not adhered to;
- G. Reports concerns to the CST;
- H. Maintains open and honest dialogue with members of the CST;
- I. Provides the CST documentation of visits as requested;
- J. Acknowledges their potential for civil liability for negligence in enforcing stated rules and limitations; i.e. a new criminal offense; and
- K. Approved Supervisors shall comply with the requirements for approval as outlined in section to 5.780.

Approved Supervisor non-compliance with requirements may result in modification or discontinuance of their status as the Approved Supervisor.

5.786 *The following shall be specified in the written Approved Supervisor contract:*

- A. Name(s) of the minor(s) with whom the Approved Supervisor is allowed to oversee any type of contact;
- B. Follow the duties and responsibilities of the Approved Supervisor as outlined in Section 5.785 and support the offender's approved safety plan for contact;
- C. If the Approved Supervisor is not in compliance with all of the requirements (see Section 5.780), the CST may discontinue or modify contact privileges and/or the approval status of the Approved Supervisor; and
- D. Advise that an Approved Supervisor's potential civil liability for negligence in enforcing stated rules and limitations.
- E. An Approved Supervisor can request to the CST that they be removed from such status at any time and of their own volition as this is a voluntary status.

5.790 *The Role of an Approved Community Support Person*

An Approved Community Support Person (ACSP) is a person approved by the CST to participate in community activities with the offender [see section 5.715(A)]. These activities do not include approved purposeful contact with a minor. Research indicates the likelihood of a client's success is enhanced with the existence of positive support, pro-social peers and engagement in pro-social recreational activities.¹⁵⁰

5.791 *Qualifications of an Approved Community Support Person (ACSP)*

- A. They are aware of the nature of the offense and other offending behavior;
- B. They have received additional education as recommended by the treatment provider;
- C. They must agree to voluntarily support the offender in approved community activities which have been previously approved by the CST;
- D. They must understand that their role is a limited support role and does not extend to supervising any contact with minors;
- E. They must be willing to communicate concerning behavior and/or high risk behavior on the part of the offender to the CST;

¹⁵⁰ Andrews, D. A. & Bonta, J. (2010). *The Psychology of Criminal Conduct (5th ed.)*. Newark, NJ: Matthew Bender.; Andrews, D. A., Bonta, J., & Wormith, J. S. (2011). The risk-need-responsivity (RNR) model: Does adding the good lives model contribute to effective crime prevention? *Criminal Justice and Behavior*, 38(7), 735-755.; Willis, G. (2010). Back to basics: Empirical support for the importance of release planning in reducing sex offender recidivism. *Sexual Abuse in Australia and New Zealand*, 2(2), 54-57; Willis, G. & Grace, R. (2008). The quality of community reintegration planning for child molester. *Sexual Abuse: A Journal of Research and Treatment*, 20, 218-240.

- F. They must be willing to communicate unauthorized contact with minors to the CST in a timely manner;

Discussion: While it is the responsibility of the offender to report unauthorized contact or violations, there remains an expectation that the ACSP will encourage such accountability and confirm the offender has been transparent and accountable to the CST when such contact or behavior occurs.

- G. They must be able to model pro-social behavior for the offender;
- H. If they are currently under Court or Parole Board ordered supervision or enrolled in treatment they must be compliant with both; and
- I. They must support the goals of supervision and treatment.

5.792 Criteria that disqualifies a person after being approved as an Approved Community Support Person (ACSP)

- A. They no longer wish to, or are able to, be an ACSP;
- B. They fail to communicate openly with the CST;
- C. They demonstrate lack of support for the goals of the CST;
- D. They allow, in their presence, an offender to have unauthorized contact with a minor, victim or other vulnerable person;
- E. They fail to report unauthorized contact with a minor, victim or other vulnerable person;
- F. They fail to report any known violation to the CST;
- G. They have an active warrant for their arrest or engage in criminal activity while an ACSP; or
- H. They are under supervision or in treatment and have violated their own treatment or supervision conditions. The CST will suspend or terminate their ACSP status based upon the nature of the violation.

5.793 Education for Approved Community Support Person

The educational piece, which the therapist or the CST determines on an individual basis, should or could include the following:

- A. The clients thorough disclosure of the offense and acceptance of all responsibility;
- B. What constitutes sexual offending and other abusive behaviors and the ongoing risk factors;
- C. The client's treatment progress;

- D. That a client's risk may be variable over time and managed by adaptive coping responses;
- E. The client's community supervision conditions, treatment contract expectations, and rules regarding the approved activity; and/or
- F. The client's requirement to provide the CST with a written safety plan.

Discussion: Because this education must be specific to the client, clients are encouraged to participate in the session(s) with their support person(s).

Discussion: If an ACSP has completed the criteria as outlined in Section 5.790 then the person's status should transfer to another agency. The ACSP should not have to complete additional educational requirements if they remain in good standing.

6.000 Standards of Practice for Post-Conviction Polygraph Testing (PCSOT)

6.000 Post-Conviction Polygraph Testing (PCSOT)

The polygraph is used to add incremental validity to treatment planning and risk management decisions regarding clients in community and institutional settings. The concept of “incremental validity” refers to improvements in decision making through the use of additional information sources. **Benefits of polygraph testing include improved decision making, deterrence of problem behavior, and access to information that might otherwise not be obtained.**¹⁵¹

Polygraph test results (see Section 6.151 A-D for specific types of test results) shall not be used as the sole determining factor in the supervision and treatment decision-making process.¹⁵² **The Community Supervision Team (CST) should consider all existing clinical indicators that provide information about a client's overall presentation.** Such indicators may include, but are not limited to, interviews, quality of treatment participation, polygraph examination results and disclosures, scores on dynamic risk assessments, psychological evaluation results, behavioral observations, and collateral reports. These indicators should thoroughly inform decisions pertaining to a client's progress in treatment, activities in the community, and contact with potentially vulnerable persons.

Polygraph testing is one of several methods of behavioral monitoring. Additional forms of behavioral monitoring include drug/alcohol testing, plethysmograph testing, viewing time (VT) assessment, and other case management practices such as collateral contacts, office and home visits, employment visits, computer and phone monitoring, and increased supervision and treatment requirements.

6.002 Expectation for Honesty

The CST shall set the expectation for honesty and complete disclosure from the client. Such openness will contribute to community safety, the development of an appropriate treatment plan and successful progression through treatment.

6.010 Recommended Guidelines for Polygraph Exam Timeframes

Please note these timeframes are provided as recommendations for Community Supervision Team (CST) decision-making, which should ultimately be based on the risk, and supervision and treatment needs of the client.

- A. Instant Offense Exam - Implement within first 3 months of denier's intervention, or at the start of sex offense specific treatment.
- B. Sexual History Exams¹⁵³ - Implement within first 12 months of sex offense specific treatment.
- C. Maintenance/Monitoring Exams - Implement within first 3 months of sex offense specific treatment, and continue on a regular basis every 6 months thereafter.

6.010 Types of Post-Conviction Polygraph Examinations

There are six different types of Post-Conviction polygraph exams:¹⁵⁴

- A. Instant Offense Exams
- B. Sexual History Exams
- C. Maintenance Exams
- D. Sex Offense Monitoring Exams
- E. Child Contact Screen Exams
- F. Specific Issue Exams

CST members, including polygraph examiners, shall maintain the integrity of the distinct types of post-conviction polygraph examinations, and shall not mix questions among the various types of post-conviction exams, other than maintenance and

¹⁵³ For offenders who refuse to answer incriminating sexual history polygraph questions, including incriminating sexual offense history polygraph questions, providers shall refer to Standard 3.160 I.2 to determine how to respond.

¹⁵⁴ The American Polygraph Association identifies five types of polygraph exams: instant offense exams, prior-allegation exams, sexual history disclosure exams, maintenance exams, and sex offense monitoring exams. An issue-specific exam, such as the prior-allegation exam, may also be utilized by CSTs in supervising and treating sex offenders, as appropriate.

monitoring exams which can be mixed. For example, an exam shall not combine a sexual history question regarding historical sexual offending behavior and a maintenance question regarding current alcohol consumption while under supervision.

6.011 Instant Offense Polygraph Examination

An instant offense exam is an event-specific polygraph for clients who deny any or all important aspects of the allegations pertaining to their present sex offense crime(s) of conviction.¹⁵⁵

An instant offense polygraph examination shall be used by the CST to manage clients in denial as specified in Section 3.520, or prior to clarification with the victim, if there are any significant discrepancies between the clients and the victim, as specified in Section 5.752 D.

6.012 Sexual History Polygraph Examination

A sexual history exam assesses the client's history of involvement in unknown or unreported offenses and other sexual compulsivity, sexual pre-occupation, or sexual deviancy behaviors. Information and results from these examinations should be provided to the professional members of the CST to add incremental validity to decisions pertaining to risk assessment, risk management and treatment planning.¹⁵⁶

Sexual history polygraph examination is most effective when initiated within the first year of treatment to assist clients with treatment engagement and progress.¹⁵⁷ The CST shall utilize the sexual history polygraph examination process as part of treatment planning as indicated in Section 3.165 I. 2., and as one clinical indicator to assess treatment progress as identified in Section 3.160 M, when clinically appropriate. For clients who refuse to answer incriminating sexual offense history questions, including incriminating sexual offense history polygraph questions, providers shall refer to Standard 3.160 I.2 to determine how to respond.

Discussion: The use of the polygraph examination combined with the sexual history documentation prepared by the client as part of the group process underscores the SOMB's expectation for honesty and compliance from clients who have agreed to participate in supervision and treatment.

- A. The treatment provider shall ensure that the client has completed a written sexual history disclosure using the SOMB Sexual Behavior Disclosure Packet (see Appendix

¹⁵⁵ American Polygraph Association (2016). *Model Policy for Post-Conviction Sex Offender Testing*. [Electronic version] Retrieved 11.22.2016, from <http://www.polygraph.org>.

¹⁵⁶ American Polygraph Association (2016). *Model Policy for Post-Conviction Sex Offender Testing*. [Electronic version] Retrieved 11.22.2016, from <http://www.polygraph.org>.

¹⁵⁷ Konopasek, J.E. (2015). Expedient Disclosure of Sexual History via Polygraph Testing: Treatment Outcome and Sex Offense Recidivism. *Journal of Offender Rehabilitation*, 54(3), 194-211.

Q) prior to the examination date. A sexual history polygraph examination should not be conducted until the client has written his/her sexual history and reviewed it in their treatment program. The treatment provider shall ensure that the polygraph examiner has access to a copy of the client's SOMB Sexual Behavior Disclosure Packet (see Appendix Q) prior to or at the time of the exam. If the packet is not received by the time of the examination appointment, the examiner shall have the discretion of administering a sexual history polygraph examination or another type of examination. For clients who refuse to answer incriminating sexual offense history questions, including incriminating sexual offense history polygraph questions, providers shall refer to Standard 3.160 I. 2 to determine how to respond.

Discussion: Proper polygraph preparation by the client involves the thorough review of recent and past behaviors. If this preparation has not been completed, the treatment provider should consult with the examiner prior to an exam occurring. Clients should be prepared to be open and honest with the polygraph examiner as the first step of client accountability and community safety. Effective preparation has been shown to improve a client's ability to resolve questions and issues of concern.

- B. The sexual history polygraph examination process* shall cover the following areas:
1. Sexual contact with underage persons (persons younger than age 15 while the client is age 18 or older);
 2. Sexual contact with relatives whether by blood, marriage, or adoption, or where a relationship has the appearance of a family relationship (a dating or live-in relationship exists with the person(s) natural, step or adoptive parent);
 3. Use of violence to engage in sexual contact including physical restraint and threats of harm or violence toward a victim or victim's family members or pets, through use of a weapon, or through verbal/non-verbal means; and
 4. Sexual offenses (including touching or peeping) against persons who appeared to be asleep, were drugged, intoxicated or unconscious, or were mentally/physically helpless or incapacitated.
- *For clients who refuse to answer incriminating sexual offense history questions, including incriminating sexual offense history polygraph questions, providers shall refer to Standard 3.160 I. 2 to determine how to respond.
- C. At the discretion of the CST, **additional polygraph assessment may be necessary to explore the client's history of involvement in other paraphilias** (e.g., internet-facilitated sexual offending including use of child sexual abuse images) including sexually compulsive behaviors, other illegal, abusive or harmful sexual activities, or unlawful sexual behaviors.

Discussion: CST members should consult with the examiner regarding addressing the client's sexual history polygraph examination requirements in a series of

narrowly focused examinations (e.g., single issue exam) instead of broader examination methods (e.g., multi-issue exam). The final decision related to the method for the sex history exam is made by the polygraph examiner.

- D. The CST shall consider utilizing relevant questions that ask the female client if she has helped or planned with anyone to commit a sexual offense, either against a minor-aged person, or a forcible sex act against anyone. Another area of consideration is whether she has been present when anyone has committed an illegal sex act. These questions should be covered in the female client's sex history exam, and can also be utilized during a monitoring polygraph exam. For clients who refuse to answer incriminating sexual offense history questions, including incriminating sexual offense history polygraph questions, providers shall refer to Standard 3.160 I. 2 to determine how to respond.

Discussion: Problematic and concerning behaviors by female clients may not be detected or covered in the typical sex history questioning.

- E. The CST, including the polygraph examiner, should convene a staffing if a client does not verify his/her sexual history via no significant reactions (indicative of non-deception) on polygraph results. The purpose of the staffing should be to identify how to address this issue in treatment and supervision planning, including any steps necessary to support the client in successfully completing the sexual history disclosure and polygraph examination process. For clients who refuse to answer incriminating sexual offense history questions, including incriminating sexual offense history polygraph questions, providers shall refer to Standard 3.160 I. 2 to determine how to respond.
- F. Under certain circumstances, the CST can waive the SOMB requirements for fully resolved sexual history polygraph examination results – such as when a client has already made substantial disclosures in all areas of inquiry and when additional information is unlikely to more fully inform the community supervision team about risk level, sexual deviancy or compulsivity patterns, and related treatment needs. For clients who refuse to answer incriminating sexual offense history questions, including incriminating sexual offense history polygraph questions, providers shall refer to Standard 3.160 I. 2 to determine how to respond.
- G. Sexual history polygraph examinations should generally be delayed for clients who are denying significant aspects of the instant offense, including any substantial discrepancies between the victim's and client's account of the abuse (see Section 3.500 regarding managing clients in denial). Proper procedure dictates that denial surrounding the details of the instant offense be satisfactorily resolved before proceeding to a more general sexual history polygraph. However, when history examinations do occur prior to resolving the index offense, test questions shall exclude reference to the victim(s) of the instant offense.

6.013 Maintenance/Monitoring Polygraph Examination

A maintenance exam thoroughly assesses, either periodically or randomly, the client's compliance with any of the designated terms and conditions of probation, parole, and treatment rules.¹⁵⁸

A sex offense monitoring exam explores the possibility the client may have been involved in unlawful sexual behaviors including a sexual re-offense during a specified period of time. Other relevant questions dealing with behaviors related to probation and treatment compliance should not be included.¹⁵⁹

Discussion: Maintenance/monitoring exam questions can be covered on the same exam, however, the examiner should consider saliency of questions covered if utilizing the same exam.

Maintenance/monitoring polygraph examinations shall be employed to periodically assess the client's honesty with community supervision team members and compliance with supervision and treatment. Maintenance/monitoring polygraph examinations shall be implemented every three to six months, starting within the first 90 days of treatment and then periodically thereafter. A minimum of two maintenance/monitoring polygraphs shall occur on an annual basis, except as allowed by this Section and Section 5.050, and can be completed more frequently based on the client's risk and need. Maintenance/monitoring polygraphs shall be employed more frequently with those clients who present as high-risk, have previously unresolved examination results, or may benefit from more active monitoring.

The CST shall regularly assess the ongoing use of maintenance/monitoring polygraphs, and may unanimously elect to adjust the use of maintenance/monitoring polygraphs based on all clinical indicators of a client's risk and need, which may include prior polygraph results. In the case of a client who consistently exhibits as lower risk based on such clinical indicators, **the CST may decrease the frequency of the maintenance exams to 9 months and monitoring exams to 1 year.**¹⁶⁰ In cases where only monitoring exams are being used on an annual basis, maintenance exams may still be employed on an as-needed basis to address specific identified supervision and treatment risk concerns, but it is not appropriate to conduct maintenance exams covering time periods longer than 9 months.

Discussion: The determination of whether or not a client is low risk should be based on all clinical indicators which demonstrate a reduction in risk behavior. This may

¹⁵⁸ American Polygraph Association (2016). *Model Policy for Post-Conviction Sex Offender Testing*. [Electronic version] Retrieved 11.22.2016, from <http://www.polygraph.org>.

¹⁵⁹ American Polygraph Association (2016). *Model Policy for Post-Conviction Sex Offender Testing*. [Electronic version] Retrieved 11.22.2016, from <http://www.polygraph.org>.

¹⁶⁰ Note the different timeframes for maintenance (9 months) and monitoring (1 year) exams. The CST can use these timeframes but must address these issues separately during the exam if timeframes are going to be between 9 months and 1 year.

include polygraph results with no significant reactions (indicative of non-deception) over a consistent period of time, as well as continued amenability and cooperation with treatment, supervision and polygraph examinations.

Discussion: The maintenance/monitoring polygraph conducted in the absence of any new allegations or incidents of concern may be an effective deterrent to high risk or non-compliant behavior.¹⁶¹ The use of polygraph may reduce involvement in ongoing high risk behaviors, and improve treatment and supervision compliance.¹⁶² In addition, the expectation of a polygraph exam assists clients in avoiding or controlling high risk behaviors.¹⁶³ For this reason, community supervision team members should consider the possible deterrent benefits of randomly scheduled maintenance/monitoring exams for clients.

- A. Maintenance/monitoring polygraph examinations shall cover a wide variety of sexual behaviors and compliance issues that may be related to victim selection, grooming behaviors, deviancy activities or high-risk behaviors. Maintenance/ monitoring polygraph examinations shall prioritize the assessment and monitoring of the client's involvement in any non-compliance, high-risk, and deviancy behaviors that may change over time. Information obtained from these exams may signal an increase in risk level prior to re-offending if these behaviors were present, or a decrease in risk if they were absent. Narrowing the scope of maintenance/monitoring examinations can sometimes be helpful to address concerns about possible re-offending, and may be useful to resolve the concerns of the community supervision team. The purpose of maintenance/monitoring exams is to identify risk behavior prior to sexual reoffending.

Discussion: It is generally understood in testing sciences that broader screening examinations, regarding multiple or mixed issues, offer greater screening utility through sensitivity to a broader range of possible concerns, but these tests can slightly diminish validity. More narrowly focused tests offer greater diagnostic specificity to support action or intervention in response to known incidents or specific allegations, and have greater validity. CST members should consult with the examiner regarding the type of monitoring/maintenance exam, and the final decision regarding the type of exam is made by the examiner.¹⁶⁴

- B. Maintenance/monitoring polygraph testing shall be based upon the requirements of the Standards as outlined in this section, including the client's risk and need. The timing of other polygraph testing, such as sexual history or instant offense exams, shall not be a factor in considering when to complete maintenance/monitoring

¹⁶¹ Buttars, A., Huss, T. & Brack, C. (2016). An analysis of an intensive supervision program for sex offenders using propensity scores. *Journal of Offender Rehabilitation*, 55(1), 61-68; Spruin et al. (2018).

¹⁶² Grubin & Madsen (2006); Spruin et al. (2018).

¹⁶³ Spruin et al. (2018).

¹⁶⁴ National Research Council (2003). *The Polygraph and Lie Detection*. Washington, DC: National Academies Press. Retrieved from: www.nap.edu/openbook.php?isbn=0309084369.

exams. The CST may increase the frequency of maintenance/monitoring testing if the client's sexual history disclosure is unresolved.

6.014 Specific Issue Polygraph Examination

Specific issue polygraph examinations assess the details of a client's involvement in a known or alleged incident, or to help resolve any discrepancies or inconsistencies in the client's account of a known incident or allegation.

The CST shall not conduct specific issue polygraph examinations on active criminal investigations, unless by agreement with the investigators.

6.015 Child Contact Screen Polygraph Examination

Child Contact Screen (CCS) polygraph examinations shall be used to assist the community supervision team in making recommendations about contact with the client's own children who are not already known to be victims or siblings of victims. The CCS polygraph shall occur prior to the completion of the child contact Screen (pursuant to Standard 5.700). This examination is conducted in the absence of known or alleged offenses against the client's own children, and is conducted for the purpose of gathering information to assist in the assessment of the client's potential risk to offend against his/her own children. For clients who refuse to answer incriminating sexual offense history questions, including incriminating sexual offense history polygraph questions, providers shall refer to Standard 3.160 I. 2 to determine how to respond.

6.020 Communication with the Client

Informing test subjects of potential areas of inquiry is a generally accepted practice by CST members. However, the CST shall not advise clients of specific test questions prior to the scheduled appointment. The CST shall inform the client regarding the type of examination.

Discussion: Discussing potential sanctions before or during the polygraph exam process, by any CST members, can have a negative impact on the exam results and should be avoided.

6.021 Communication with the Examiner

CST members shall discuss and collaborate with the examiner on the type of exam to be administered as well as any specific areas of concern. The examiner shall notify the CST, if known, when a polygraph examination is scheduled, and request needed

information based upon the type of exam to be administered. The CST should provide supporting documentation related to the areas of concern, if available and appropriate.

6.022 Examiner Responsibility for Test Questions

The examiner shall make the final determination of questions used, and determine whether to administer a broader or more narrowly focused examination within the scope of the requested polygraph exam. The examiner shall note the reasons for the change in focus of the examination in the exam report, if such a change is made.

6.030 Follow-up Examinations

If the examination has unresolved responses to any test questions, communication between CST members shall occur to determine the best course of action, including whether or not to do a follow-up exam, the timeframe for any follow-up exam, and the areas of focus for any potential follow-up exam (See Section 5.600).

The CST should prioritize the investigation of more recent behaviors when evaluating the client's present stability or dynamic risk level. The CST should generally require that all test questions and all-time periods are satisfactorily resolved before moving on to another maintenance/monitoring exam with different questions or time-frames (See Section 5.600).

Per the APA model policy, the examiner shall discuss with the CST the use of the successive hurdles approach to polygraph to maximize both the informational efficiency and sensitivity of multiple or mixed-issue screening polygraphs, and the diagnostic efficiency and specificity of specific issue exams. Follow-up examinations should utilize a single-issue technique whenever increased validity is needed to resolve an issue.¹⁶⁵

Discussion: A successive hurdles approach may result in a focus on more concerning risk behavior and no longer testing on less serious risk factors that can be verified through other clinical indicators. It is not necessary to resolve all issues in follow-up maintenance/monitoring exams, but if the CST believes it important to return to a previously unresolved issue at a later date, timeframe parameters outlined in Section 6.013 must be followed.

- A. Timeframes for follow-up examination shall be based on all clinical indicators of risk, need, and protective factors. Follow-up maintenance/monitoring exams should occur more frequently than the minimum required timeframe for such exams, and it is recommended that it occur within 60 days of the initial examination (see Section 5.630 and 5.655). The timeframe for testing shall be prioritized based on the client's

¹⁶⁵ American Polygraph Association (2016). *Model Policy for Post-Conviction Sex Offender Testing*. [Electronic version] Retrieved 11.22.2016, from <http://www.polygraph.org>. For more information on the successive hurdles approach, see the APA Model Policy.

level of risk, and can be adjusted based upon the client's preparedness to address and resolve any remaining issues of concern.

- B. Resolution of remaining concerns upon follow-up testing shall be regarded as satisfactory resolution of the earlier test results.

Discussion: The follow-up exam may cover the same timeframe as the unresolved test, or it may extend beyond the original timeframe to include the time lapse between the original exam and the follow-up. When scheduling the next maintenance exam, it is important to include timeframes not accounted for in previous testing. As outlined in Section 6.013, it is still the responsibility of the CST to ensure a minimum of 2 exams per year.

- C. In most cases it is recommended that the initial follow-up examinations be completed with the same examiner, but the CST can change examiners for later follow-up examinations, if appropriate. If a change in examiner takes place, the CST shall provide the results of the unresolved exams to the new examiner.

*Discussion: Non-deceptive test results are considered conclusive and the issue(s) under investigation shall be considered satisfactorily resolved. However, all clinical indicators of risk, need, and protective factors should be considered, including polygraph results. **Non-deceptive test results alone do not ensure safety on the part of the client, nor should they automatically result in reduced monitoring on the part of the community supervision team.***

6.032 Supporting client accountability and addressing polygraph results

The CST, after receiving input from the polygraph examiner, shall review the results of polygraph exams and share relevant information in order to respond to the exam with the client. The CST should provide a consistent message to assist the client in addressing any unresolved polygraph issues.

6.033 Technical expertise of the examiner

Questions regarding the technical aspects of the polygraph shall be referred to the polygraph examiner. When any team member has difficulty understanding or interpreting written polygraph reports or results, he or she shall contact the polygraph examiner for clarification on technical questions, and refrain from interpreting polygraph results beyond what is contained in the report. Clients should discuss any questions or concerns related to the polygraph exam with the CST. If the CST is unable

to provide the needed information, the CST may contact the polygraph examiner for clarification on the client's behalf.¹⁶⁶

If the supervising officer and/or treatment provider has questions regarding information contained in the written polygraph report, they may request that the polygraph examiner review the audio and video recording of the exam to confirm the information provided. In addition, the supervising officer and/or treatment provider may also request a copy of the recording for review. If the client has questions regarding information contained in the written polygraph report, the client should discuss the questions with the supervising officer and treatment provider in an attempt to resolve them. The supervising officer and/or treatment provider may request a review of the video, as described above, on the client's behalf.

Discussion: While the CST may consult with the polygraph examiner regarding technical aspects of the polygraph, it is not the polygraph examiner's role to recommend treatment or supervision interventions.

6.100 Adherence to recognized standards

In addition to the SOMB Standards, polygraph examiners shall adhere to the established ethics, standards, examination techniques, and practices of the American Polygraph Association (APA) for Post-Conviction Client Testing (PCSOT), and the American Society for Testing and Materials (ASTM).

6.110 Equipment and instrumentation

Examiners shall use a computerized polygraph system consisting of five or more channel polygraph instrument that will simultaneously record the physiological phenomena of abdominal and thoracic respiration, electro-dermal activity, changes in cardiovascular activity, and additional component sensors to monitor and record in-test behavior.

6.120 Time allotted for examination

¹⁶⁶ American Polygraph Association (2016). *Model Policy for Post-Conviction Sex Offender Testing*. [Electronic version] Retrieved 11.22.2016, from <http://www.polygraph.org>. The APA Model Policy (11.1.2) states, "Following the completion of the posttest review, examiners should not communicate with the examinee or examinee's family members regarding the examination results except in the context of a formal case staffing."

Each examination (including the pre-test, in-test, and post-test phases) shall be scheduled for a minimum of 90 minutes in duration. Examiners shall not conduct more than five post-conviction examinations per day.

Discussion: Time periods for polygraph examinations may vary depending upon the type of exam being conducted and the individual being tested. Some exams may last less than 90 minutes and others may exceed 90 minutes, however, all exams shall be scheduled for a minimum of 90 minutes.

6.130 Potential conflict of interest

In order to avoid a conflict of interest with an in-house polygraph examiner, the integrity of the distinct roles/perspectives of the CST must be preserved. The polygraph examiner and therapist or supervising officer must never be the same person. In community settings, the client shall not be mandated to test with the in-house examiner.

6.140 Authorization and release

The examiner shall obtain the client's agreement, in writing or on the audio/video recording, to a standard waiver/release statement. The language of the statement shall minimally include the client's voluntary consent to take the test, that all information and results will be released to professional members of the community supervision team, an advisement that admission of involvement in unlawful activities will not be concealed from authorities, and a statement regarding the requirement for audio/video recording of each examination.

For clients with a developmental disability, the examiner shall obtain the written agreement of the client with a developmental disability, and if applicable, the legal guardian, for participation in the polygraph examination and the release of information authorization.

Discussion: Polygraph examiners are not mandatory child abuse reporters by statute; this includes polygraph examiners with clinical training. All members of the community supervision team who are mandatory child abuse reporters are responsible for assuring the timely and accurate reporting of child abuse to the appropriate authorities.

6.141 Client background information

Prior to beginning the examination, the examiner shall elicit relevant personal information from the client consisting of brief personal and demographic background information, case background information, and medical/psychiatric health information (including medications) pertaining to the client's suitability for polygraph testing (see Section 6.210 regarding determination of suitability for testing).

6.142 Review of testing procedures

The testing process shall be explained to the client, including an explanation of the instrumentation used.

6.143 Pre-test interview

The examiner shall conduct a thorough pre-test interview, including a detailed discussion regarding areas of concern (see Section 6.021 for CST communication to the examiner regarding areas of concern).

6.144 Test questions

Before proceeding to the in-test phase of an examination, the examiner shall review and explain all test questions to the client. The examiner shall not proceed until satisfied with the client's understanding of all test questions.

A. Question construction shall be:

1. Simple, direct, easily understood by the examinee, and tailored to the client;
2. Behaviorally descriptive of the client's involvement in an issue of concern
Discussion: Questions about knowledge, truthfulness, or another person's behavior are considered less desirable but may be utilized;
3. Time limited (date of incident or timeframe);
4. Absent of assumptions about guilt or deception;
5. Free of legal terms and jargon;
6. Avoid the use of mental state or motivational terminology.

B. While the community supervision team members shall communicate all issues of concern to the examiner in advance of the examination date, the exact language of

the test questions shall be determined by the examiner at the time of the examination (see Section 6.022 for more information).

6.145 Number of test charts/presentations

A minimum of three primary test charts/presentations shall be administered on the exam issue(s).

6.146 Post-test review

The examiner shall review preliminary test results, if available, with the client. Clients shall be given the opportunity to explain or resolve any reactions or inconsistencies.

6.147 Examination recording

Recording (audio and video) of polygraph examinations shall be required. Audio and video recording of the entire examination and the written report shall be maintained for a minimum of three years from the date of the examination.¹⁶⁷

6.150 Examination results

All testing data shall be hand scored by the examiner. Computerized scoring algorithms may be used for comparative purposes and quality assurance in the field. The computer algorithm shall never be the sole determining factor in any examination.

6.151 Test scoring results¹⁶⁸

The examiner shall render an opinion based on an empirically-supported scoring technique regarding the client's reactions to each test question:

- A. No significant reactions, indicative of non-deception;
- B. Significant reactions, indicative of deception;
- C. No opinion/inconclusive;
- D. The examiners shall note in the examination report and communicate with the CST regarding suspected attempts to manipulate the test results.

¹⁶⁷ American Polygraph Association (2016). *Model Policy for Post-Conviction Sex Offender Testing*. [Electronic version] Retrieved 11.22.2016, from <http://www.polygraph.org>.

¹⁶⁸ American Polygraph Association (2016). *Model Policy for Post-Conviction Sex Offender Testing*. [Electronic version] Retrieved 11.22.2016, from <http://www.polygraph.org>.

6.152 Prohibition against mixed results

The examiner shall not conclude the client has significant reactions, indicative of deception in response to one or more test questions and no significant reactions, indicative of non-deception in response to other test questions within the same examination.¹⁶⁹

6.160 Examination report

The examiner shall issue a written report to the supervising officer and treatment provider within fourteen days of the examination. The report shall include factual and objective accounts of the pertinent information developed during the examination, including statements made by the examinee during the pre-test and post-test interviews.

Discussion: If there are any disclosures during the polygraph exam related to violations of the treatment contract or the terms and conditions of supervision, or of a previously unknown sexual assault victim that create a significant risk either to the community or client, then the examiner should contact the supervising officer and treatment provider as soon as possible and prior to completing the written report.

6.161 Content of the examination report

All polygraph examination written reports shall include the following information:

- A. Date of examination;
- B. Beginning and ending times of examination;
- C. Reason for examination;
- D. Referring or requesting agents/agencies (supervision officer and treatment provider);
- E. Name of client;
- F. Location of client in the criminal justice system (probation, parole, etc.);

¹⁶⁹ American Polygraph Association (2016). *Model Policy for Post-Conviction Sex Offender Testing*. [Electronic version] Retrieved 11.22.2016, from <http://www.polygraph.org>.

- G. Case background (instant offense and conviction);
- H. Any pertinent information obtained outside the exam (collateral information if available);
- I. Brief demographic information (marital status, children, living arrangements, occupation, employment status, etc.);
- J. Statement attesting to the client's suitability for polygraph testing (medical/psychiatric/developmental);
- K. Date of last post-conviction examination (if known);
- L. Summary of pre-test and post-test interviews, including disclosures or other relevant information provided by the client;
- M. Examination questions and answers;
- N. Examination results;
- O. Reasons for inability to complete exam (if applicable);
- P. Any additional information deemed relevant by the polygraph examiner (e.g., behavioral observations or verbal statements).¹⁷⁰

6.162 Raw data and numerical scores

All numerical and computer scores shall be considered raw data and therefore shall not be disclosed in written examination reports.¹⁷¹

6.163 Information released only to professionals

Written polygraph reports and related work products shall be released only to the supervising officer and treatment provider, the court, parole board or other releasing agency, or other professionals as directed by the supervising officer and treatment provider.¹⁷²

¹⁷⁰ American Polygraph Association (2016). *Model Policy for Post-Conviction Sex Offender Testing*. [Electronic version] Retrieved 11.22.2016, from <http://www.polygraph.org>.

¹⁷¹ American Polygraph Association (2016). *Model Policy for Post-Conviction Sex Offender Testing*. [Electronic version] Retrieved 11.22.2016, from <http://www.polygraph.org>.

¹⁷² American Polygraph Association (2016). *Model Policy for Post-Conviction Sex Offender Testing*. [Electronic version] Retrieved 11.22.2016, from <http://www.polygraph.org>.

Discussion: In order to ensure that the written polygraph report can only be released by the examiner, a statement of sole proprietorship should be included with the report.

6.170 Peer reviews

The examiner shall seek peer review of at least two examinations per year using the protocol. Peer reviews shall consist of a systematic review of the examination report, test data, test questions, scored results, computer score (if available), audio/video recording (upon request), and collateral information. The purpose of the peer review shall be to facilitate a second professional opinion regarding a particular examination, to gain professional consensus whenever possible, and to formulate recommendations for the community supervision team.

6.171 Quality assurance reviews

The examiner is required to submit quality assurance reviews using the protocol form as part of the application and reapplication process (for more information, see Section 4.100).

6.172 Quality control reviews

When a quality control review is requested by the supervising officer or treatment provider, the examiner shall provide the required exam information to the polygraph examiner who will complete the quality control review.

Discussion: Quality control reviews may be initiated in response to a variety of circumstances, including but not limited to, when separate examinations yield differing test results regarding the same issue(s) and/or time period. This review would then be completed by the two examiners whose examinations yielded differing results. The purpose of this review is to clarify the reasons for the differing test results and formulate a recommendation for the community supervision team. If consensus cannot be reached, the team shall consult with a third, independent, SOMB listed full operating level polygraph examiner, agreed upon by both polygraph examiners, to review the conflicting information and offer an opinion regarding the issue. If differences in test results remain unresolved, both examinations shall be set aside and a new polygraph examination shall be conducted. Whenever consensus cannot be reached, the community supervision team must err on the side of community safety when considering their response.¹⁷³

¹⁷³ American Polygraph Association (2016). *Model Policy for Post-Conviction Sex Offender Testing*. [Electronic version] Retrieved 11.22.2016, from <http://www.polygraph.org>.

Discussion: If a client would like to initiate a quality control review, the client must first discuss the concern with the supervising officer and treatment provider in an attempt to resolve the concern within the context of a case staffing. If, after having reported the concern to the supervising officer and treatment provider, and attempting to resolve the concern, the client still wishes to proceed with a quality control review, then the client may contract with an SOMB listed full operating level polygraph examiner to complete the review. The client is responsible for all costs associated with the quality control review in such circumstances.

6.173 Selection of the reviewing examiner

When initiating a quality control review, the supervising officer and treatment provider shall contact the original examiner and, together with the original examiner, select an independent, full-operating level polygraph examiner to complete an objective peer review.

The reviewing examiner shall contact the original examiner with any questions and feedback, and shall complete the quality control review and the one-page Quality Control Summary Report together with the original examiner.

Discussion: It should not be assumed that a reviewer or reviewers present more expertise than the original examiner. Studies have found that results obtained by original examiners have outperformed those of subsequent reviewers.¹⁷⁴ Quality control reviews serve only to offer an additional professional opinion to further advise community supervision team members regarding a polygraph test whose decisions may be affected by the information and results obtained.

6.174 Conclusions from the quality control review

The polygraph examiner shall complete the one-page Quality Control Summary Report, and the supervision officer and treatment provider shall include the Report in the client's treatment and supervision files. Quality control reviewers shall refrain from making global or generalized conclusions regarding an examiner's work or competence (which cannot be done based upon a single examination). If the original results are not endorsed by the reviewer, a specific empirical flaw must be identified, and the reviewing examiner shall limit professional opinions to the following conclusions:

A. Examination is supported - results shall be accepted;

¹⁷⁴ Horvath, F. S. & Reid, J. E. (1971). The reliability of polygraph examiner diagnosis of truth and deception. *The Journal of Criminal Law*, 62(2), 276 - 281; Kokish, R. (2003). The current role of post-conviction sex offender polygraph testing in sex offender treatment. *Journal of Child Sexual Abuse*, 12(3-4), 175-194.; Raskin, D. C., & Honts, C. R. (2001). The comparison question test. In M. Kleiner (Ed.), *Handbook of polygraph testing* (pp. 1-47). New York: Academic Press.

- B. Examination is not supported - results shall be set aside;

Discussion: Setting aside an examination result does not include removal of the examination report from the client's supervision and treatment files, but should include the addition of documentation regarding the community supervision team's response.

- C. Examination is supported but qualified by identifiable empirical limitations - results may be set aside or accepted with reasonable caution. Such qualifying limitations may include identifiable empirical limitations pertaining to client suitability, data quality, and clarity of the issue/s under investigation, and are often noted by the original examiner in the examination report.

6.200 Suitability for testing

The supervising officer and treatment provider shall address suitability for testing related to issues such as severe medical, psychiatric, or developmental conditions as prescribed in Section 5.610. **The supervising officer and treatment provider shall consult with the examiner before deciding whether to employ polygraph testing where there are questions related to suitability for testing.** The CST shall not advise a client to discontinue taking prescriptions as directed by a medical or psychiatric professional as part of the assessment of suitability for testing.

6.210 Determination of suitability for testing

Polygraph examiners shall utilize the American Polygraph Association Suitability Criteria (see Appendix L-2) in making decisions related to suitability for testing.¹⁷⁵ Polygraph examiners shall not test clients who present as clearly unsuitable for polygraph testing at the time of the examination. The CST shall periodically review each client's suitability for polygraph testing. In cases where the client is determined to be unsuitable for polygraph testing, the CST shall consider other forms of behavioral monitoring.

6.211 Sensitivity to suitability considerations

If the CST determines that it is appropriate to use a polygraph examination with a client who presents with suitability considerations, the examiner shall conduct the examination in a manner that is sensitive to the client's physical, mental, or emotional condition. The examiner shall note in the examination report those conditions that may

¹⁷⁵ American Polygraph Association (2016). *Model Policy for Post-Conviction Sex Offender Testing*. [Electronic version] Retrieved 11.22.2016, from <http://www.polygraph.org>; American Polygraph Association (2018). *Model Policy for Post-Conviction Sex Offender Testing*. [Electronic Version] Retrieved 11.22.2019, from https://apoa.memberclicks.net/assets/docs/Misc.Docs/PCSOT_Model_Policy_March_2018%20.pdf.

have affected the client's suitability for testing, and indicate the test results as "qualified" and to be viewed with caution

Discussion: In this context, "qualified" means that the test results may not have the same level of validity as test results that are not complicated by suitability considerations.

6.220 Language barriers

The need for language translation, including both foreign languages and sign languages, shall be assessed by the CST on a case-by-case basis.

Discussion: Polygraph examinations completed with the aid of a language interpreter should be regarded as "qualified" and the test results should be viewed with caution.

6.221 Selection of interpreters

The polygraph examiner shall utilize a court certified interpreter, whenever possible. It is important that idiomatic language usage be done accurately and consistently across each successive test chart. Client's relatives or friends shall not serve as interpreters for polygraph examinations. The examiner shall inform the interpreter in advance about the process of the polygraph test. The examiner shall obtain from the interpreter a written translation, including a mirror translation, of each question presented during the in-test phase of an examination. This translation shall be prepared prior to the in-test phase and shall be maintained as part of the polygraph examination record.

6.230 Cultural awareness

Polygraph examiners shall be sensitive to ethnic or cultural characteristics when conducting examinations. Polygraph examiners shall attempt to elicit information regarding ethnic or cultural characteristics in advance of the examination date and shall conduct the examination in a manner that is sensitive to those ethnic or cultural characteristics.

7.000 Continuity of Care and Information Sharing

Continuity of care is the process of delivering seamless service through integration, coordination and the sharing of information between MDT/CST members, including treatment providers. Due to the length of time many clients may be involved in treatment, the likelihood of changing providers is increased, resulting in additional challenges to continuity of care and information sharing. In an effort to maintain protective factors and reduce negative impacts to the client, it is important for all members of the current treatment team (MDT/CST) to collaborate with one another to avoid disruption to the continuity of care, keeping in mind continuity of care pertains to those clients beginning treatment, those returning to treatment, as well as those in aftercare programs. **Continuity of care values the progress a client has achieved in treatment and supervision, and increases the client's investment in treatment by aligning services with individual needs.**

7.010 Value and benefit of continuity of care

- A. Continuity increases a client's investment in treatment and supervision, and leads to improved outcomes.
- B. Continuity values and recognizes progress that has been achieved.
- C. Continuity emphasizes the value of ongoing assessment of current needs.
- D. Continuity prevents unwarranted repetition of services.
- E. Continuity contributes to rapport building and aids in the therapeutic alliance.

7.020 Members of the MDT/CST should prioritize continuity of care through collaboration with past and present service providers. Examples include, but are not limited to, a client being sentenced to the Department of Corrections after a period of community supervision, and transitions between judicial districts.

7.030 Upon initiating services with a client, the MDT/CST should determine how to ensure continuity.

- A. Treatment Providers shall obtain signed releases and request previous treatment records.
- B. Treatment Providers shall have a structured process to assess current treatment needs. This process shall incorporate past records when available; however, the absence of records does not eliminate the need to assess current treatment needs.

- C. Treatment providers and evaluators shall make every reasonable effort to identify and obtain past treatment records. In the absence of such records, it is the responsibility of the Treatment Provider to conduct a thorough and collaborative treatment review with the client, to determine what treatment has been completed, what components of treatment need additional focus, and what components of treatment have not yet been completed. See *Appendix F: Sex Offense-Specific Intake Review for Clients Who Have Been in Prior Treatment*, for an example.

Discussion: Treatment decisions shall be based on individualized risks, needs and responsivity factors, and requirements to repeat previously completed work (e.g. non-deceptive polygraph examination results, completed treatment components) should only be required with documented rationale for why repetition is needed.

- D. Treatment Providers shall use this information to determine current treatment needs and as a basis for initiating communication with MDT/CST members regarding treatment needs.
- E. Other members of the MDT/CST (including polygraph examiners and supervising officers) should communicate with previous providers to determine service needs; this may include the continuation of services or implementation of new services.

7.040 MDT/CST members, including treatment providers, should determine the level of service that is needed in relationship to what has already been completed.

- A. Previously approved conditions should not be modified solely based on a change in MDT/CST membership.
- B. Treatment Providers shall have an identified system to gather information through collateral reports and client interviews, which gives them the ability to assess the treatment content areas outlined in the Standards. Treatment Providers shall use this information to determine level of progress, treatment areas of continued focus, and treatment areas that have been completed. A sample intake assessment form can be found in *Appendix F: Sex Offense-Specific Intake Review for Clients Who Have Been in Prior Treatment*.
- C. Other members of the MDT/CST should have an identified system to gather information, either through collateral reports or client interviews, which gives them the ability to assess the previous services, provisions and level of community access, including 5.700 criteria and contact with minors. MDT/CST members should use this information to determine level of progress, service areas of continued focus, and level of community access.

Discussion: This process should include individuals who can provide information related to previous services, community access, previously approved conditions and/or restrictions. This can include, but is not limited to: support persons, family members, professionals, and previous providers. MDT/CST members, including treatment providers, should be mindful of the impacts to clients, family, and the community, when previously approved conditions are modified. Rationale for such a modification should be documented and connected to risk, need, and responsivity.

7.100 Transition Points and continuity of care consideration

Throughout the continuum of services there may be a variety of transition points. The following sections are intended to provide guidance regarding some transition points, but this is not intended to be an exhaustive list of all possible transition points.

A. Clients changing treatment providers.

1. Clients who have been granted permission for community activities should not have these privileges removed solely based on a change in treatment providers, unless compelling circumstances are present.
2. Current treatment providers may continue previously achieved conditions (e.g. contact with children) when such approval is documented by the previous treatment provider, and there is no new information to indicate such condition should be restricted.

Discussion: For example, a previously granted condition, such as visitation with children, may need to be continued in the community with comparable safeguards (e.g. allowing supervised contact with children for an individual who previously had visitation within a structured environment).

3. Members of the MDT/CST should discuss current privileges and activities and determine if these privileges and activities can be maintained in a manner in which community and victim safety is not compromised.

B. Clients being released from the Department of Corrections (DOC) facilities who have been receiving treatment in the Sex Offender Treatment and Monitoring Program (SOTMP):

1. Members of the CST should review basic needs that the client will need to access in the community and develop an interim safety plan to meet these needs while the client is waiting to begin treatment in the community. A sample interim safety plan can be found in *Appendix K: Interim General Movement Safety Plan*.
2. Clients who have been granted permission for privileges or activities should not have these privileges or activities removed solely based on a change in living environment, unless compelling circumstances are present.
3. Members of the CST should discuss current privileges and activities and determine how these privileges and activities can be maintained in a manner in which community and victim safety is not compromised.

Discussion: For example a previously granted condition such as visitation with children may need to be continued in the community with comparable safeguards (e.g. allowing supervised contact with children for an individual who previously had visitation within a structured environment).

4. When a client is released from the DOC SOTMP on parole or accepted into Community Corrections, the SOTMP treatment provider shall send all records, including a discharge summary and Risk Management Plan/Personal Change Contract, which:
 - a. Describe the level of cooperation and institutional behavior.
 - b. Describe participation in treatment, including treatment objectives addressed, completed, and left to complete.
 - c. Suggest specific conditions of parole, including adjunct treatment recommendations.
 - d. Indicate ongoing risk and protective factors
 - e. Identify any Approved support person(s)
 - f. Indicate length of time and engagement in treatment
- C. Clients returning to treatment/supervision after a period of time out of treatment/supervision:
 1. Members of the MDT/CST, including the treatment provider and evaluator should have an identified system to gather information through collateral reports and client interviews, which gives them the ability to assess and determine privileges, activities and the level of treatment needs. See Appendix E for a sample matrix for recommendations.

7.200 Information Sharing

A. Importance of Information Sharing

1. Current provider: Treatment Provider shall request all relevant and applicable previous records and will complete an assessment in the absence of such records. See Appendix F for a sample intake assessment.
2. Previous provider(s): Upon receipt of a signed release of information the Treatment Provider shall release past treatment records to include: Individual Treatment Plan, Progress Summaries, summary of polygraph results, Discharge Summaries, and additional adjunct services provided.
3. Supervising officer: Facilitate the exchange of relevant and applicable records.

B. Releases of Information

1. Treatment providers, evaluators, polygraph examiners, and supervising officers shall be aware of and comply with all applicable laws and rules related to confidentiality and

releasing of information (e.g. HIPAA, FERPA, 42 CFR, Mental Health Practice Act, Professional and Ethical codes of conduct).

2. Members of the CST/MDT should also comply with relevant agency policies regarding information sharing.

C. Records

1. Treatment Providers, evaluators, polygraph examiners, and supervising officers should follow applicable policy and statutes related to records retention.
2. **Court files are considered a permanent record and some information, such as discharge summaries, may be filed with the courts.** By logging such information in the court record, it will remain available to clients and other parties to the case, subject to the court's discretion. It is recommended that Treatment Providers provide this information to ensure the client's involvement in treatment is part of the permanent court record and, if appropriate, may be considered by the court in future decision making.
 - a. A court filing document for submitting a recommendation regarding registration for juveniles can be found in the appendices of those Standards.
 - b. A court filing document for submitting information regarding participation in treatment for adults can be found in Appendix J.

D. Discharge Summaries

- a. Supervising Officers: Discharge information should be recorded by the supervising officer at the termination of community supervision, and should be available in the file and should include records of:
 1. Treatment progress
 2. Successful or unsuccessful completion of treatment
 3. Auxiliary treatment
 4. Community stability
 5. Residence
 6. Compliance with the supervision plan and conditions of probation/parole/community corrections
 7. Most current risk assessment
- b. Treatment Provider: Discharge information shall be recorded by the Treatment Provider, and shall include, but not be limited to, the following:

1. Treatment goals and objectives completed
2. Current level of risk, including risk and protective factors
3. Successful or unsuccessful completion of treatment
4. Aftercare recommendations, if applicable

8.000 Victim Impact and a Victim Centered Approach

8.000 Sexual violence is a problem in Colorado. As communities are forced to face the issue of sexual abuse, many efforts are directed towards issues other than the victim who has been violated, the child robbed of their childhood, and the recovery and healing of the victims and their families. Victims can be overlooked as the criminal justice system focuses on the legal issues and the needs of the offender.

These Standards are designed to address the assessment, evaluation, treatment and monitoring of adult sex offenders. In order to accomplish the mission of effective management of adult sexual offenders and eliminating sexual re-offense, professionals must first start with understanding the trauma and suffering of victims. This section provides some information for professionals working with adult sex offenders and juveniles who have committed sexual offenses on the impact of sexual assault and the needs of victims.

In Colorado an estimated 1 in 3 women (36.2%) and 1 in 5 men (17.6%) will experience a sexual assault or attempted sexual assault in their lifetime.¹⁷⁶ Most victims first experience sexual assault as children or adolescents. Sexual assault is the most under reported crime in the United States. Only an estimated 19 - 23% of sexual crimes are reported to law enforcement¹⁷⁷. Far fewer are prosecuted. Research indicates the younger the victim and the closer the relationship, the less likely a victim will report.¹⁷⁸

Sexual crimes violate victims. Victims may experience chronic and severe mental and physical health symptoms, as well as social, familial, economic and spiritual harm. These symptoms cross over into all aspects of victims' lives, and victims often face long term impact and continue to struggle for recovery over the course of their lifetimes. Trauma from sexual assault changes the victim's world view, self-perception and sense of power and control. Family members of victims and communities as a whole are also negatively impacted by sexual offenses.

Regret and police reporting among individuals who have experiences sexual assault. *Journal of the American Psychiatric Nurses Association*, 18(1), 32-39.; Criminal Victimization, 2016 (NCJ 251150). Washington, DC: U.S. Dept. of Justice, Office of Justice Programs, Bureau of Justice Statistics.

¹⁷⁸ Kilpatrick, D., & McCauley, J. (2009). *Understanding National Rape Statistics*. National Resource Center on Domestic Violence; Paige, J. & Thornton, J. (2015). Healing from intrafamilial child sexual abuse: The role of relational processes between survivor and offender. *Children Australia*, 40(3), 242-259; Tjaden, P. & Thonnes, N. (2006). Extent, Nature and Consequences of rape victimization: Findings from the National Violence Against Women Survey. U.S. Department of Justice.

While the effects of sexual assault on victims are unique and may vary over time, common consequences of sexual assault include:

- fear
- anxiety
- hypervigilance
- self-blame
- guilt
- shame
- depression
- anger
- irritability
- avoidance
- intrusive thoughts
- flashbacks
- nightmares and sleeping problems
- panic attacks
- Post-Traumatic Stress Disorder
- dissociative disorders
- physiological effects, such as headaches / chronic pain
- memory impairment
- disordered eating
- sexual behavior problems
- substance abuse
- self-injuring behaviors
- suicidal ideation and attempts
- failure to identify their experience as sexual assault or a crime
- minimization of their experience
- loss of trust
- low self-esteem
- impaired sense of self and identity
- difficulty with and loss of relationships and intimacy
- isolation
- loss of independence
- financial loss
- increased vulnerability to other victimizations

Often victims report significant distress over not being believed and feelings of intense guilt and shame. Many victims and their family members have been subjected by the offender to long term and intentional grooming behaviors. **Victim impact is substantially reduced when victims are believed, protected and adequately supported.** Acknowledging and addressing the impact to victims can aid in their long-term health and recovery. Recovery and healing of victims is possible and enhanced when teams operate with a victim centered approach.

8.100 The Community Supervision Team shall operate with a victim centered approach.

A victim centered approach means that the needs and interests of victims require paramount attention by professionals working with sexual offenders. Individuals and programs working with sexual offenders should always have the victim and potential victims in mind. **This means a commitment to protecting victims,** not re-victimizing, being sensitive to victim issues and responsive to victim needs. A victim centered approach requires an avenue to receive victim input and provide information to victims. This balanced approach has many benefits, including improved treatment and supervision of the offender, increased accountability, enhanced support for victims and a safer community. Collaboration and information sharing enhances the supervision team's ability to maintain a victim centered approach.

Understanding these offenses from the perspective of the victim is important to comprehend the gravity of the offending behavior and see the full picture. Awareness of the impact of sexual assault is necessary for providers to operate with a victim centered approach. Professionals must recognize the harm done to victims, and apply this knowledge, to work effectively with offenders to internalize and demonstrate long term behavioral change. The impact to the victim

informs and guides the decision-making process and assists professionals in prioritizing the safety and needs of victims of sexual crimes.

- 8.200 The supervision team should help inform victims regarding the treatment and supervision process and share information on how this process demonstrates the commitment towards victim recovery, community safety and no new victims.
- A. Teams should respect the victims' wishes regarding their level of involvement and also understand that their interest may change over time.
 - B. When communicating with victims, teams should consider what information can be shared and explain that not all information can be shared and why.

Discussion: Teams should discuss what information can and should be shared, taking into account what information is valuable for the victim, for the victim to feel safe, and for the victim to feel that the community as a whole is being protected. Teams have legal and ethical considerations when determining what information is appropriate for sharing with victims and should exercise good professional judgment. Victims are assisted by understanding why decisions are made in the interest of public safety. Even with support systems in place, the criminal justice system is still difficult for victims. Teams can honor and contribute to justice for victims by operating with a victim centered approach.

- C. Ongoing training regarding sexual victimization is recommended for all supervision team members and required by these standards to be an approved evaluator, polygraph examiner or treatment provider. Teams should (shall for juvenile) include a victim representative on the supervision team to ensure a victim centered approach is being implemented.

Colorado Statutes and Guidance Pertaining to Victims

The Colorado Revised Statutes state, "The Sex Offender Management Board shall develop and implement methods of intervention for adult sex offenders, which methods have as a priority the physical and psychological safety of victims and potential victims and which are appropriate to the assessed needs of the particular offender, so long as there is no reduction in the safety of victims and potential victims."

The Colorado Victims' Rights Act (VRA) was passed by the voters in 1992. This Victims' Bill of Rights is part of the Colorado Constitution and ensures that victims have a right to be treated with fairness, respect and dignity and have a right to be heard when relevant informed and present at all critical stages of the criminal justice system. The legislative declaration of the Colorado Revised Statutes states, "The general assembly hereby finds and declares that the full and voluntary cooperation of victims of and witnesses to crimes with state and local law enforcement agencies as to such crimes is imperative for the general effectiveness and well-being of the criminal justice system of this state. It is the intent of this part 3, therefore, to assure that all victims of and witnesses to crimes are honored and protected by law enforcement agencies, prosecutors, and judges in a manner no less vigorous than the protection afforded criminal defendants. (Please see C.R.S. Article 4.1 of Title 24 for a listing of all victims' rights.) All post-sentencing agencies have obligations under the VRA though victims must "opt in" to receive notification after sentencing.

For more information regarding victim considerations in the school environment, please see the SOMB School Resource Guide.

Colorado has one of the most comprehensive statutes pertaining to victims' rights in the nation. Victim services personnel exist in all levels of the criminal justice system, including law enforcement, prosecution, probation, community corrections, Department of Corrections and Division of Youth Corrections.

Supporting Victims

The following are common needs of sexual assault victims and ways in which members of the community supervision team can support victims and contribute to their healing and recovery:

Needs:

- Caring, compassionate response
- Physical and psychological safety/protection
- Being believed
- Therapy and other resources
- Opportunities for input
- Information regarding the offender management, supervision and treatment
- Accurate information being provided to the offender's and victim's support systems

Support:

- Listen to victims and allow them to be heard
- Provide information about team members' roles and responsibilities
- Reassure victims that the abuse was not their fault
- Hold the offender fully accountable
- Validate the victims' experience
- Acknowledge victims' strengths and ability to heal/recover
- Be clear regarding what information can and cannot be shared
- Be willing to repeat information
- Be sensitive to where victims are in their recovery process
- Advocate, as needed, for therapy for victims
Recognize the impact of the trauma on the victims' behaviors, beliefs and emotions, and how those may be expressed
Thank victims for reporting and going through the very difficult criminal justice process
- Recognize the importance of how clarification, contact or reunification are implemented (refer to section 5.000)

Common Victim Concerns and Safety Issues

- Location of the offender
- The negative impact of the victim encountering the offender in the community, especially in intra-familial cases, such as family functions

- The offender being able to manipulate the CST members in the same ways he/she manipulated the victim and victim's family
- Lack of trust that information regarding the offender's treatment and supervision is being provided
- The conditions of supervision, such as allowing contact with minors
- The offender continuing to deny, minimize or blame the victim for the abuse
- Whether or not the offender is demonstrating engagement in treatment and changing their behavior
- Whether or not the offender is telling the truth, demonstrating honesty through polygraphs or other means, and compliant on supervision
- Whether or not the offender is expressing genuine remorse for the abuse

9.000 Standards for Plethysmography

9.100 Standards of Practice for Plethysmograph Examiners

- 9.110 A plethysmograph examiner shall adhere to the "Guidelines for the Use of the Penile Plethysmograph," published by the Association for the Treatment of Sexual Abusers, ATSA Practitioner's Handbook¹⁷⁹ (See Appendix L-1 and L-3) and shall demonstrate competency according to professional standards and conduct plethysmograph examinations in a manner that is consistent with the reasonably accepted standard of practice in the plethysmograph examination community.
- 9.120 Plethysmograph examiners shall adhere to the following specific procedures during the administration of each examination:
- A. The examiner shall obtain the informed assent of the offender for the plethysmograph examination, and shall inform an offender of the examination methods, how the information will be used, and to whom it will be given. The examiner shall also inform the offender about the nature of the evaluator's relationship with the offender and with the court. The examiner shall respect an offender's right to be fully informed about the examination procedures, and results of the examination should be shared with the offender and any questions clarified;
 - B. The examinee shall also sign a standard waiver/release of information statement. The language of the statement should be coordinated prior to the plethysmograph examination with the therapist, probation/parole officer, community corrections case manager, or prison treatment provider;
 - C. The examiner shall elicit relevant biographical and medical history information from the examinee prior to administering the actual plethysmograph examination;
 - D. The testing process shall be completely explained to the examinee, including an explanation of the instrumentation used and causes of general nervous tension;
 - E. Test results shall be reviewed with the examinee; and
 - F. The examiner must have received all pertinent and available case facts within a time frame sufficient to prepare for the examination.

¹⁷⁹ Plethysmographic testing measuring physiological changes associated with sexual arousal are also available for female sex offenders.

- 9.130 Plethysmograph examinations should never be used in isolation. The results must be utilized in conjunction with other evaluative measures or as a part of a treatment program to effectively assess risk.

Appendix A: Sex Offender Management Board Administrative Policies

This appendix is designed for listed treatment providers, evaluators, and polygraph examiners pursuant to section 16-11.7-101-09, C.R.S., as well as those who have filed an Intent to Apply for listing status with the Sex Offender Management Board (SOMB), to explain the requirements of listing and the process of denial of placement to the list, complaints, and appeal. The SOMB does not have professional licensing authority, but rather statutory authority pursuant to section 16-11.7-101, *et. seq.* The provisions of these standards constitute the process of the SOMB related to listing, denial of placement, complaints and appeal.

LISTING AS A PROVIDER

1. This appendix applies to treatment providers, evaluators, and polygraph examiners who are listed in the following categories:
 - A. Intent to Apply for listing status (polygraph examiners only)
 - B. Associate level provider status
 - C. Full Operating level provider status
 - D. Clinical Supervisor status
 - E. Not currently practicing status
2. Providers not on the SOMB approved provider list, including any provider who is denied placement or removed from the Provider List, shall not provide any sex offense-specific services pursuant to statute in Colorado to convicted adult sex offenders or juveniles who have committed sexual offenses. No referral source shall use any provider not on the approved provider list, denied placement or removed from the provider list per 16-11.7-106 C.R.S.
3. Approved providers shall submit data consistent with the SOMB's data collection plan and participate in, and cooperate with, SOMB research projects related to evaluation or implementation of the Standards or sex offender management in Colorado in accordance with sections 16-11.7-103 (4) (d), 16-11.7-103 (4) (h) (II), and 16-11.7-103 (4) (k), C.R.S.
4. Confidentiality of SOMB Files: The following information in the SOMB files, including application materials, for applicants, individuals on the provider list, and those who have filed an Intent to Apply is considered confidential and is not available to the public, including listed providers: background investigations, criminal history checks, school transcripts, letters of

recommendation, trade secrets, confidential commercial data including applicant forms created for business use, curriculum developed for the business and clinical evaluations, and information that, if disclosed, would interfere with the deliberative process of the SOMB's Application Review Committee(s) (ARC), and if disclosed to the public would stifle honest participation by the ARC. The Colorado Open Records Act applies to other materials (Section 24-72-201, C.R.S.).

DENIAL OF PLACEMENT ON THE PROVIDER LIST

The SOMB reserves the right to deny placement on the Provider List to any applicant to be a treatment provider, evaluator, or clinical polygraph examiner under these Standards. Reasons for denial include but are not limited to:

1. The SOMB determines that the applicant does not demonstrate the qualifications required by these *Standards and Guidelines*;
2. The SOMB determines that the applicant is not in compliance with the *Standards* of practice outlined in these *Standards and Guidelines*;
3. The applicant fails to provide the necessary materials for application as outlined in the application materials and the administrative policies and procedures;
4. The SOMB determines that the applicant exhibits factors (boundaries, impairments, etc.) which renders the applicant unable to treat clients;
5. The SOMB determines that the results of the background investigation, the references given or any other aspect of the application process are unsatisfactory.

APPEAL PROCESS FOR DENIED PLACEMENT OR ANY SPECIFIC LISTING STATUS ON THE PROVIDER LIST

Any applicant who is denied placement on the Provider List or any specific status (e.g., Intent to Apply for polygraph examiners, a new listing category, or moving up to a higher provider level) on the Provider List will be supplied with a letter from the Application Review Committee (ARC) outlining the reasons for the denial and notifying the applicant of his or her right to appeal to the full SOMB. Appeals will be conducted in the following manner:

1. The applicant/listed provider must submit a request to the SOMB for an appeal in writing within 30 days of the notification of denial of placement or of any specific status on the Provider List to the SOMB.
2. The SOMB appeal process will consider only information that is relevant to the reasons for denial outlined by the ARC in the denial letter. Any information outside of the scope of the reasons for the denial will not be considered by the SOMB in the appeal process.
3. Instead of appearing in person at the appeal, the applicant/listed provider may request to participate by alternate electronic means with the SOMB.

4. Appeals will be governed by Section D of this appendix.

COMPLAINT AGAINST A LISTED PROVIDER

When a complaint is made to the SOMB about a Treatment Provider, Evaluator, or Polygraph Examiner on the Provider List, the complaint shall be made in writing to the SOMB and signed by the complainant. The appropriate complaint forms are available on the SOMB website. All complaints against treatment providers and evaluators on the Provider List will be forwarded for investigation and review to DORA pursuant to section 16-11.7-106(7)(a)(I), C.R.S. Concurrently, the SOMB will review the complaint for potential action pursuant to section 16-11.7-106(7)(b)(I), C.R.S. All complaints against polygraph examiners on the Provider List will not be forwarded to DORA.

Complaints regarding Treatment Providers, Evaluators, and Polygraph Examiners who have never been listed or who were not listed on the Provider List at the time of the complaint, or who have not filed an Intent to Apply for listing status, are not appropriate for SOMB intervention. The SOMB will inform complainants that it does not have the authority to intervene in these cases but may refer complaints against Treatment Providers and Evaluators to DORA for further action. Complaints appropriate for SOMB intervention are those complaints against sex offender Treatment Providers, Evaluators, and Polygraph Examiners, who are on the Provider List, or who have filed an Intent to Apply for listing status, or who were on the Provider List or under Intent to Apply listing status at the time of the alleged violation. Complaints against a listed provider regarding actions of unlisted persons under the supervision of that individual, including those who have filed an Intent to Apply, are also appropriate for SOMB intervention.

Complaints will be addressed in the following manner:

1. All complaints will be subject to an initial administrative review by the staff of the SOMB. This review will determine if the complaint process has been followed using the proper forms available on the SOMB website. Insufficient or improper filings may not be accepted for review and the SOMB staff will provide written notice of the deficiencies to the complainant.
2. SOMB staff will forward complaints to the ARC for review and will notify the complainant in writing of the receipt of the complaint.
 - A. If the complaint fails to allege a Standards violation sufficiently, the ARC will notify the complainant in writing.
 - B. Determinations under section 2.a. above are final and not subject to appeal.
3. If a complaint sufficiently alleges a Standards violation, ARC's review of the complaint (a process separate from any review contemplated or completed by DORA) may take any of the following actions (please note that these actions may be independent from any action taken by DORA and may or may not be the same as DORA's results):
 - A. Determine complaint unfounded, and notify complainant and identified provider in writing.

OUTCOME: No formal actions will appear on file for this identified provider regarding this complaint.

- B. Request clarifying information from the complainant and/or the identified provider.
- C. Contact the identified provider to determine if the complaint can be resolved informally through mutual agreement between the identified provider and the ARC. If mutual agreement can be reached, the complaint will be determined to be unfounded. The complainant will be notified verbally of the mutual agreement and in writing that the complaint will be unfounded. As an unfounded complaint, the results of the mutual agreement will remain confidential and neither party shall disclose the results of the mutual agreement or that a mutual agreement has been reached. All inquiries to the SOMB regarding the identified provider will be responded to by disclosing only that the identified provider does not have any founded complaints against him/her (unless there was a prior founded complaint).

OUTCOME: No formal actions will appear on file for this identified provider regarding this complaint.

- D. Request both parties appear before the ARC. Either party may request alternate electronic means with the ARC in lieu of appearing in person. The request to appear electronically must be made at the time of the request by the ARC to appear. Any decision to conduct a hearing is made at the sole discretion of the ARC. If the ARC holds a hearing regarding the complaint, the following procedures apply:
 - 1. Both the complainant and identified provider will be notified in writing of the date, time and place for the hearing.
 - 2. If mutual agreement resolving the complaint can be reached, the complaint will be determined to be unfounded. The complainant and identified provider will be notified in writing that the complaint will be unfounded. As an unfounded complaint, the results of the mutual agreement will remain confidential and neither party shall disclose the results of the mutual agreement or that a mutual agreement has been reached. All inquiries to the SOMB regarding the identified provider will be responded to by disclosing only that the identified provider does not have any founded complaints against him/her (unless there was a prior founded complaint).

OUTCOME: No formal actions will appear on file for this identified provider regarding this complaint.

- E. Initiate and conduct an investigation of the information contained in the complaint either directly or through staff, investigators or consultants.
 - 1. Conclude that a complaint is unfounded and the identified provider is notified of the results of the complaint

OUTCOME: No formal actions will appear on file for this identified provider regarding this complaint.

2. Conclude that a complaint is founded, and the identified provider is notified of the outcome of the complaint, which may include being issued a Letter of Removal from the Provider List. Any founded complaint in one approval category shall result in a review of the individual's other approval categories, and may impact these other approval categories as well (e.g., a founded complaint against an evaluator may impact the individual's treatment provider status as well).

OUTCOME: Referral sources will be notified and the identified provider will be taken off the list either 31 days from the date of issue of the Letter of Removal *OR* following the completion of the appeal process should either party appeal the decision. If the situation warrants, the SOMB may exercise the option of seeking guidance from the Office of the Attorney General for possible legal action.

An appeal of a founded complaint by the ARC may be taken to the SOMB pursuant to Section D of this appendix.

E. APPEALS

Any complainant or identified provider who wishes to appeal a finding on a complaint may appeal the decision to the SOMB. Appeals regarding findings on complaints will be conducted in the following manner:

1. A request for appeal must be submitted to the SOMB in writing within 30 days of the date of the complaint finding letter.
2. Both parties will receive notification of the date, time and place of the appeal and the deadline for submission of additional materials. These additional materials must be limited to 10 pages and 25 copies must be received by the SOMB 30 days prior to the hearing. Materials received after the deadline or not prepared according to these instructions will not be reviewed at the appeal.
3. The SOMB will only consider information specific to the finding outlined by the ARC in the complaint finding letter.
4. Copies of the complaint materials (subject to redactions or other protections to comply with statutorily contemplated confidentiality concerns) considered by ARC will be provided to the SOMB and the parties at least 30 days prior to the hearing and the parties and the SOMB are expected to make every effort to maintain confidentiality of the materials.
5. Either party may request alternate electronic means with the SOMB in lieu of appearing in person. The request must be made in writing at the time of the request for the appeal.

6. Appeals will be scheduled in conjunction with regular SOMB meetings. The appellant must confirm, in writing, their ability to attend the scheduled appeal; failure of the appellant to do so may result in the appeal being dismissed. The SOMB staff and the SOMB chairperson will jointly review requests for a rescheduling of an appeal. Parties will be notified verbally or in writing, as applicable, regarding the decision on their request to reschedule. Requests to reschedule will be reviewed based on reasonable cause.
7. Either party may bring one representative with them. Appeal hearings (in person or via electronic means) will be 80 minutes long: 20 minutes for presentation by the ARC; 20 minutes for a verbal presentation by the complainant; 20 minutes for the identified provider; and 20 minutes for questions and discussion by the Board. Applicable time periods may be modified upon request, by either party or a SOMB member, followed by a motion by a SOMB member and a vote on the motion.
8. There must be a quorum of the SOMB to hear an appeal. ARC members count towards establishing a quorum, but must abstain from voting on the appeal per SOMB by-laws.
9. The SOMB will consider appeals in open hearing and audio record the proceedings for the record unless certain material must be considered by the SOMB in executive session pursuant to section 24-6-402 (3) (a) (III), C.R.S. Any vote will occur in open session.
10. The SOMB must vote on the original findings of the ARC. They must vote in one of the following three ways:
 - A. Accept the finding of a Standards violation by the ARC.
 - B. Reject the finding of a Standards violation by the ARC.
 - C. Accept the Standards violation by the ARC and change the proposed sanction imposed by ARC.
11. The results of the appeal will be documented via letter sent to both parties within 30 days of the date of the appeal hearing.
12. Complaint records will be retained for 20 years per the Division of Criminal Justice Records Retention Policy.
13. The appeal process in Appendix F is the sole SOMB remedy for a provider denied placement on or any specific status on the Provider List, or resolution of a complaint(s). The decision of the SOMB is final.

Contact information and relevant forms related to this appendix may be found on the SOMB website at <https://www.colorado.gov/pacific/dcj/form/file-complaint-somb>.

Appendix B: Guidance Regarding Victim/Family Member Readiness for Contact, Clarification, or Reunification

The following are considerations for Community Supervision Teams (CSTs) in determining readiness and ability to make informed decisions for individuals who have been victimized and have requested contact, clarification, or reunification, as well as readiness for parents/guardians and other children in the home. These are not to be construed as expectations that the victim must meet, but for the CST to be knowledgeable and able to assess family readiness. It is important to consider the following areas as a means of ensuring that the individual is not placed in a situation that could result in further victimization or could compromise their physical or emotional safety or well-being.

Victim Readiness

Contact and Clarification:

The person who has been victimized is able, based on their age and developmental level, to:

- A. Acknowledge and talk about the abuse and the impact of the abuse without minimizing the scope (e.g. does not excuse the abuse based on frequency, beliefs about the offender's intent, etc.)
- B. Accurately assess and identify the offender's responsibility for the abuse and aftermath and does not blame self.
- C. Place responsibility on the offender and does not minimize or deny responsibility based on fear of repercussions.
- D. Avoid perceiving self as destroyer or protector of the family.
- E. Demonstrate assertiveness skills and is willing to disclose any further abuse or violations of a safety plan.
- F. Demonstrate a reduction of symptoms and is not actively experiencing Post Traumatic Stress Disorder.
- G. Express feeling safe, supported, protected and in control, but not controlling.
- H. Maintain positive and supportive relationships with those who have demonstrated an ability to support them.

- I. Demonstrate healthy boundaries, self-respect and empowerment.

Reunification:

In comparison to contact or clarification, which typically occurs at specified periods of time and can often be highly structured, reunification occurs over an extended period of time, following clarification, and often without high levels of external structure. The following areas should be considered in addition to the factors listed above.

The person who has been victimized is able to:

- A. Demonstrate awareness of previous grooming tactics of the offender.
- B. Recognize ongoing grooming patterns.
- C. Exercise assertiveness skills and confront the offender as needed.
- D. Identify and seek out external support if needed.

Non-Offending Parent or Guardian Readiness

The non-offending parent or guardian:

- A. Believes the victim's report of the abuse.
- B. Recognizes and understands, without minimizing, the impact of the abuse on the victim.
- C. Holds the offender solely responsible for the abuse without blaming the victim in any way.
- D. Has received appropriate education regarding their role as a non-offending parent.
- E. Demonstrates the ability to be supportive and protective of the victim.
- F. Is more concerned with victim impact and recovery than consequences or inconveniences for the offender.
- G. Has received appropriate education regarding sexual offender behavior.
- H. Has received full disclosure of the extent of the offender's sexual offense(s)/abusive behavior(s).
- I. Is aware of the grooming tactics used by the offender for not only the victim, but also other family members.
- J. Supports and implements the family safety plan.

- K. Demonstrates the ability to recognize and react properly to signs of high risk or offending behavior.
- L. Can demonstrate assertiveness skills that would allow him/her to confront the offender and is willing to disclose high risk or offending behavior.

Secondary Victim, Sibling or Other Children in the Home Readiness

This individual:

- A. Has an understanding of the nature of abuse and the impact on the victim.
- B. Does not blame the victim or minimize the abuse.
- C. Understands the offender is solely responsible for the abuse.
- D. Has received information about offender treatment and high risk and grooming behaviors.
- E. Can express the ways the abuse has affected and impacted his/her life.
- F. Demonstrates healthy boundaries, including the ability to identify and set limits regarding personal space and privacy.
- G. Is aware of the family safety plan.

Appendix C: Young Adult Modification Protocol

Young Adult Modification Protocol¹⁸⁰

The SOMB recognizes that due to responsivity¹⁸¹ issues and the unique needs of some young adults, applying the Adult Standards without flexibility can be problematic. A different approach may be needed when addressing the unique challenges this population may pose.

Neurobiological research gives us a deeper understanding of adolescent and young adult brain development. This research indicates that the brains of many young adults, ages 18 to 25, are still developing thus it is imperative for CST/MDT members to assess and treat this population and consider allowing exceptions according to each individual regardless of where they are in the criminal justice system.^{182, 183, 184, 185, 186, 187, 188, 189}

Offenders, ages 18-25 may be more inclined to make poor decisions. This may or may not be related to risk for recidivism. It is important for the CST/MDT to evaluate an offender's problematic behavior, specifically, when responding to violation or rule breaking behavior, to best determine whether or not it signifies an increase in risk and if so, what needs exist and what response best addresses those needs and manages risks. Such assessment should include strengths and protective factors.¹⁹⁰ The nature and severity of the behavior and the degree which it relates to risk should be commensurate with the appropriate interventions. Risk of harm to others must not be ignored and should be balanced when

¹⁸⁹ Steinberg, L. & Scott, E. (2003). Less Guilty by Reason of Adolescence: Developmental Immaturity, Diminished Responsibility, and the Juvenile Death Penalty. *American Psychologist*, 58, 1009-1018.

¹⁹⁰ Protective factors are conditions or attributes (skills, strengths, resources, supports or coping strategies) in individuals, families, communities or the larger society that help people deal more effectively with stressful events and mitigate or eliminate risk in families and communities.

assessing impulsive behavior typical in adolescence versus criminal, anti-social characteristics which are indicative of risk.

Many young adults may present more like an adolescent rather than an adult. Research indicates over responding to non-criminal violations with this population can cause more harm than good for both the offender and the community.¹⁹¹

Guiding Principles:

The following guiding principles, in addition to the guiding principles in the Adult Standards, are for Community Supervision Teams (CSTs)/Multi-Disciplinary Teams (MDTs) considering a recommendation of making exceptions to the Adult Standards for a specific Young Adult population.

- A. Victim and Community Safety are paramount. See Guiding Principle #3 in the Adult Standards and Guidelines for further detail.
- B. Victim self-determination regarding involvement and input. See Guiding Principle #7 in the Adult Standards and Guidelines for further detail.
- C. Sexual offenses cause harm.
- D. Psychological well-being of victims is critical.
- E. Focus needs to be on promoting strengths/health to reduce risk.
- F. Emphasis on developing pro-social support systems.
- G. Ensuring offender accountability for offending behavior.
- H. Treatment planning includes development of social/interpersonal skills.
- I. Treatment planning takes into account stages of brain development.
- J. Not to minimize the impact to the victim but to improve/creating pathways for more effective treatment.
- K. Collaboration of CST/MDT and review factors 1-10.

Exclusionary Criteria:

(If previous records indicate or current testing establishes that one of the following is true)

- A. Primary sexual interest/arousal in pre-pubescent individuals
- B. Clear documented pattern of sexual sadism

¹⁹¹ Teicher, M., Anderson, S., Polcari, A., Anderson, C., & Navalta, C. (2002). Developmental neurobiology of childhood stress and trauma. *Psychiatric Clinics of North America*, 25, 397-426.

- C. Sexually Violent Predator
- D. Psychopathy
- E. Meets criteria for mental abnormality (Millon Clinical Multiaxial Inventory)

Protective Factors:

- A. In school/stable employment
- B. Living in a home and receiving developmentally appropriate supervision
- C. Pro-social support system
- D. Maturation
- E. No substance abuse
- F. No delinquent lifestyle
- G. Absence of severe MH-Axis I or II
- H. Compliance with treatment and supervision expectations
- I. Amenable to treatment, willingness to engage
- J. Lack of known multiple offenses

CSTs and MDTs are encouraged to look at young adult offenders, and develop individualized treatment plans and containment efforts based on the maturation and risk of the individual. Independent living skills, risk and protective factors should be discussed by CSTs/MDTs and factored into programming for the offender. CSTs/MDTs should consider consulting with other experienced adult or juvenile practitioners to assist in the development of effective treatment and supervision as well as to identify possible resources that may aid in information gathering. In some cases, it may be appropriate to use juvenile risk assessments with this population for informational purposes only, and with the understanding that using a juvenile risk assessment instrument on an individual over the age of 18 is not a validated assessment of risk. The CST/MDT based on a unanimous decision, is empowered to make exceptions to specific standards as needed and changes shall be clearly documented. After conducting a thorough evaluation in accordance with section 2.000 of the Standards, evaluators should document any recommendation to vary from, or waive a Standard with the appropriate rationale for such.

Risk in young adults will likely be best mitigated by ensuring the CST/MDT pays close and careful attention to risk, need, and responsivity principles¹⁹² as well as dynamic and static risk factors and

¹⁹² The Risk Needs Responsivity (RNR) model indicates that the comprehensiveness, intensity and duration of treatment provided to individual offenders should be proportionate to the degree of risk that they present (the *Risk* principle), that treatment should be appropriately targeted

ensures all of these are assessed and addressed as major treatment targets. "Treatment should use methods, and be delivered in such a way as to maximize participants' ability to learn. To achieve this, treatment programs should selectively employ methods that have generally been shown to work. Further, participants' response to treatment will be enhanced by effortful attendance to their individual learning style, abilities and culture."¹⁹³

It is important for CSTs to consider Section 5.700 in the Adult Standards when addressing issues of sibling/child contact. Standard 5.760 specifies circumstances when parts of 5.700 may be waived with unanimous decision of the CST. This might allow contact with adolescents in unique situations. CSTs/MDTs are encouraged to review young adult situations, and make decisions that help the offender be successful while maintaining community safety.

at participant characteristics which contribute to their 3 risk (the *Need* principle), and that treatment should delivered in a way that facilitates meaningful participation and learning (the *Responsivity* Principle). DOC SOTMP Evaluation, 2012, Central Coast Clinical & Forensic Psychology Services.

YOUNG ADULT MODIFICATION PROTOCOL

CRITERIA CHECKLIST

Instructions:

This form should be completed by the CST/MDT and serves as documentation for the client file. As new information becomes available, the CST/MDT should re-evaluate the inclusionary and exclusionary items to determine if there has been any change. An offender who meets criteria for the Young Adult Modifications at one point in treatment, may not meet the criteria at subsequent points in treatment, and therefore any modification to the Standards should not be considered automatic grounds for future modifications.

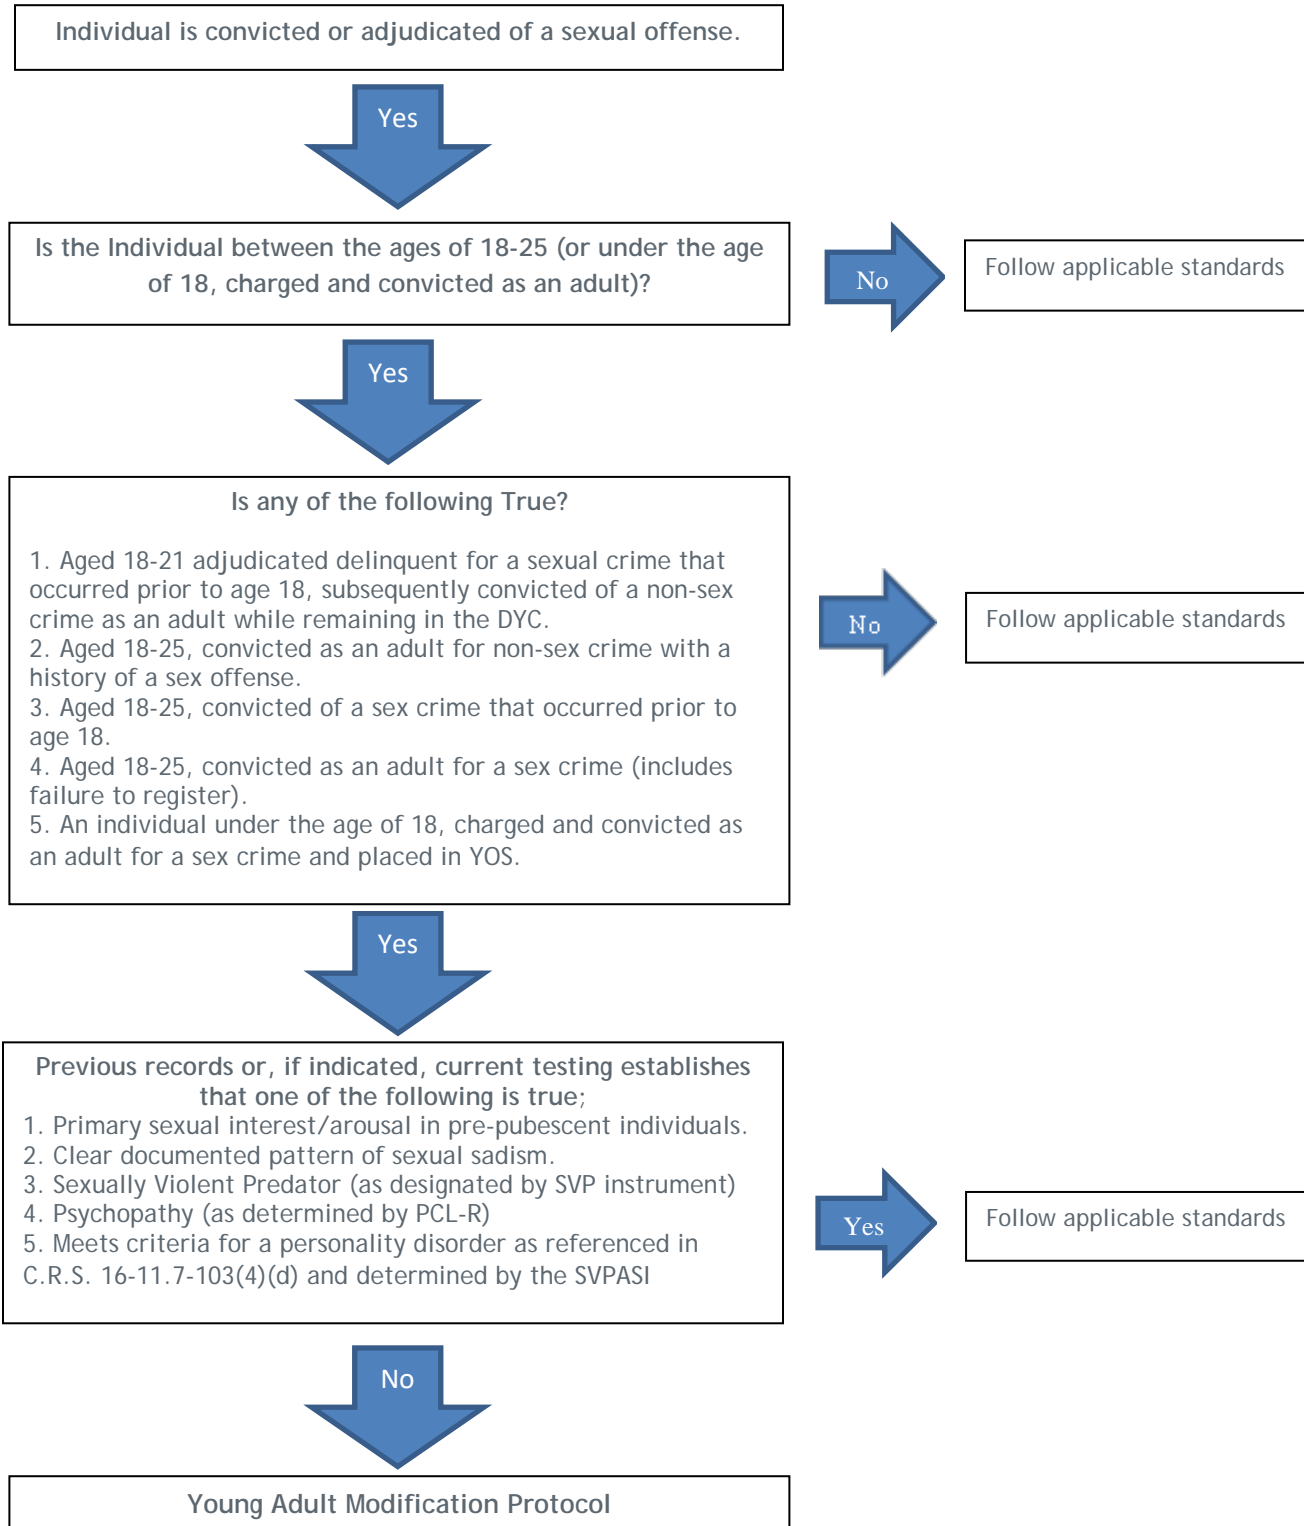

Protocol for determining if the Individual meets criteria for Young Adult Modifications

- Inclusionary Items:** If you select YES to any of the following item, continue to Exclusionary Items.
- Yes___ No___ Individual is aged 18-21 and adjudicated delinquent for a sex crime that occurred prior to the age of 18, subsequently convicted of a non-sex crime as an adult while remaining in the DYC.
- Yes___ No___ Individual is aged 18-25, convicted as an adult for a non-sex crime with a history of a sexual offense.
- Yes___ No___ Individual is aged 18-25, convicted of a sex crime that occurred prior to age 18.
- Yes___ No___ Individual is aged 18-25, convicted as an adult for a sex crime (includes failure to register).
- Yes___ No___ Individual is under the age of 18, charged and convicted as an adult for a sex crime and sentenced to YOS.
- Exclusionary Items:** If you select YES to any of the following items, the individual will not meet criteria for Young Adult Modifications, and the applicable Standards shall be followed.
- Yes___ No___ Primary Sexual Interest/arousal in pre-pubescent individuals.
- Yes___ No___ Clear and documented pattern of sexual sadism.
- Yes___ No___ Sexually Violent Predator as determined by the SVPASI.
- Yes___ No___ Psychopathy (as determined by the PCL-R)
- Yes___ No___ Meets criteria for a personality disorder as referenced in C.R.S. 16-11.7-103(4)(d) and determined by the SVPASI.

Treatment Provider Signature Date

Supervising Officer Signature Date

YOUNG ADULT MODIFICATION PROTOCOL CRITERIA FLOW CHART

Appendix D: Guidelines for the Use of Sexually Stimulating Materials

Applicable Standards from the *Standards and Guidelines for the Assessment, Evaluation, Treatment and Behavioral Monitoring of Adult Sex Offenders (Adult Standards)*:

5.010 As soon as possible after the conviction and referral of a sex offender to probation, parole, or community corrections, the supervising officer should convene a Community Supervision Team (CST) to manage the offender during his/her term of supervision.

- A. Community and victim safety, and risk management are paramount when making decisions about the management and/or treatment of offenders.

Applicable Standards (i.e. Additional Conditions of Supervision) from the *Standards and Guidelines for the Evaluation, Assessment, Treatment and Supervision of Juveniles Who Have Committed Sexual Offenses (Juvenile Standards)*:

Appendix J (12) You shall not possess or view any pornographic, X-rated or inappropriate sexually arousing material and you will not go to or loiter in areas where pornographic materials are sold, rented, or distributed. This includes, but is not limited to phone sex lines, computer generated pornography, and other cable stations that show nudity or sexually explicit material.

INTRODUCTION: Why is the SOMB addressing the issue of sexually stimulating materials?

The primary purpose for this appendix is to provide explanation and guidance to Community Supervision Teams (CSTs) and Multi-Disciplinary Teams (MDTs) regarding Adult Standard 5.620 and Juvenile Appendix J (12). In offering this guidance, the SOMB also seeks to enhance community and victim safety by specifically focusing on the individual risk, needs, and responsivity factors for each adult or juvenile who has sexually offended.

A goal of treatment is to help adults and juveniles who have sexually offended to gain an increased understanding of healthy, non-abusive sexuality. To achieve this treatment goal, treatment providers and supervision officers must engage the adult or juvenile in non-judgmental discussion of sexual topics and materials. The CST/MDT should support the development of healthy sexual relationships, when appropriate, that involve consent, reciprocity, and mutuality. In addition, other aspects of sexuality, including masturbation, should be addressed with the adult or juvenile who has sexually offended. The ultimate goal of treatment and supervision is to assist the adult or juvenile with ceasing the victimization of others and to terminate the reinforcement of illegal, abusive and harmful sexual arousal/interest and patterns of behavior.

It is understood that certain materials, such as sexually oriented or explicit materials, shall be

prohibited, and that although the research on the impact of these materials is mixed, they may have a potentially negative impact on the propensity to sexually offend. However, other non-sexually oriented materials that are sexually stimulating in nature, as determined on an individualized basis, may have no such negative impact. Prohibiting all stimulating sexual materials for all adults and juveniles who have sexually offended may be counterproductive in that they may not adversely influence sexual deviancy, but may discourage an open discussion about sexual practices, interests, and patterns of behavior. Further blanket prohibitions on sexually stimulating materials also eliminate the opportunity for the CST/MDT to support the adult or juvenile in the development of non-abusive, healthy practices. Finally, given the primary goal of enhanced community and victim safety, the development of healthy sexuality can lead to decreased illegal, harmful and abusive sexual arousal/interest and patterns of behavior.

The following sections of this appendix will outline recommendations to the CST/MDT on how to make a determination about the types of sexually stimulating materials that may be allowed and disallowed for the individual adult or juvenile who has sexually offended.

Definitions:

For the purposes of this appendix, sexually oriented or explicit material is defined as pornographic images, videos, and narratives that may be viewed in print or on electronic devices such as a computer, television, gaming system, DVD player, VCR, video camera, voice recorder, pager, telephone, or cell or smart phone, and that require the viewer to be age 18 to purchase. Such materials are developed and viewed explicitly for sexual gratification purposes. On the other hand, sexually stimulating materials are non-pornographic materials that may lead to sexual interest or arousal, but were not developed exclusively with that goal in mind. Examples of materials that may be sexually stimulating depending upon the adult or juvenile who have sexually offended include incidental nudity within the context of a non-pornographic movie, sexually suggestive images, and non-sexual images such as underwear advertisements and pictures of children.

Nudity is neither sexually stimulating material in and of itself, nor does the fact that the representation or person viewed being clothed necessarily render it not sexually stimulating. The concern is a pornographic depiction emphasizing sexual/human devaluation. It is the context of the nudity and the thoughts generated in the mind of the adult or juvenile who has sexually offended that should be the concern of the CST/MDT when applying the concepts contained in this appendix. The CST/MDT should be mindful that the conviction or adjudication for a sexual offense does not render the adult or juvenile asexual, and this is not the goal of treatment or supervision. Instead, the goal is to develop an understanding of safe, non-abusive, and healthy sexual practices.

Victim Safety and Risk Issues:

When considering the potential relationship between sexually stimulating materials and sexual offending behavior, the CST/MDT is inevitably concerned with the propensity to re-engage in risky/harmful behavior that could potentially place the community and victims at risk by the adult or juvenile who has sexually offended. Allowing adults or juveniles the ability to have access to sexually stimulating materials may be viewed as socially undesirable, even if it contributes to overall health and pro-social growth. Therefore, the CST/MDT must always

employ strategies to reduce risk and increase the opportunity for a successful outcome.

The primary practices that are essential to CST/MDT success in achieving a reduction in recidivism are based on four principles regarding the adult or juvenile who has sexually offended:

- A. Effectively assess risk and criminogenic need, as well as overall strengths (also known as “protective factors”). Effective interventions should be closely matched to risk, need and responsivity factors;
- B. Employ SMART, tailored supervision and treatment strategies;
- C. Use incentives and graduated sanctions to respond promptly to observed behavior; and
- D. Assist with the development of interests, activities and relationships that are incompatible with sexual offending rather than merely avoiding high-risk behaviors, which results in greater success in leading an offense-free life. Implement performance-driven personal management practices that promote and reward recidivism reduction.

It is also important to be sensitive to victim needs and issues with regard to the policy related to use of sexually stimulating materials. Ensuring that supervision and treatment planning efforts are individualized will help assist with this endeavor. For example, if an adult or juvenile who has offended sexually is allowed to utilize sexually stimulating materials, it is essential that the images do not represent a likeness of the victim. Victim representative (see Adult Standards Section 5.500 and Juvenile Standards Section 5.700) input should occur as well to ensure that the CST/MDT is making a balanced decision.

Polygraph Issues:

Polygraph exams should primarily focus on the use of sexually oriented or explicit materials while under supervision and in treatment by the adult or juvenile who has sexually offended, rather than attempting to identify the use of sexually stimulating materials. These questions may be asked in a variety of ways using terms such as pornography, pornographic, sexually explicit, and X-rated. Polygraph examiners should be aware of what sexually stimulating materials have been allowed by the CST/MDT for the individual adult or juvenile who has sexually offended. The CST/MDT should advise polygraph examiners more specifically what concerns there are when suggesting that maintenance or specific issue exams explore use of sexually oriented or explicit material, and indicate to the examiner if permission has been granted to the offender to have access to stimulating materials. Interviewing regarding both types of materials (sexually oriented or explicit, and sexually stimulating) during the polygraph exam may be useful for accountability purposes.

Community Supervision Team (CST)/Multi-Disciplinary Team (MDT) Guidance:

Sexually stimulating materials should be prohibited during the early phases of treatment and supervision for all adults and juveniles who have sexually offended. Once progress on treatment engagement and supervision compliance has been documented via a thorough assessment, the CST/MDT may make the decision on how to regulate and monitor stimulating sexual materials.

In making this decision, the CST/MDT should consider what materials would not contribute to the further development and reinforcement of illegal, abusive, and harmful sexual arousal/interest and patterns of behavior for the adult or juvenile who has sexually offended. As noted above, the CST/MDT in their assigned role under the Standards should be mindful of community and victim safety first. The use of sexually stimulating materials should only be allowed after a thorough review in advance and specific written permission being granted from the CST/MDT. If granted, the use of specific stimulating sexual materials should be reflected in the treatment contract and case plan, terms and conditions of supervision, and safety planning. The CST/MDT should specifically document the rationale for the decision to allow the use (e.g., promote healthy sexuality, an approved masturbation plan, etc.) of specific sexually stimulating materials for each adult or juvenile who has sexually offended based on the following criteria:

- A. Risk as assessed through the use of static and dynamic risk assessment measures
- B. Criminogenic needs as assessed in the treatment and supervision plan
- C. Characteristics of the instant offense and pattern of offending as identified by self-report in the sexual behavior disclosure packet, and as verified by non-deceptive sexual history polygraph exams, where appropriate
- D. Illegal, abusive and harmful sexual arousal/interest based upon arousal/interest assessment, where appropriate. Materials related to the pattern of offending or that contribute to illegal, abusive or harmful sexual arousal/interest should always be prohibited.
- E. Engagement in treatment and compliance with supervision, including progress and openness related to sexuality issues and activity, and reported use of sexually oriented or stimulating materials, as verified by monitoring polygraph and other forms of monitoring where appropriate. In addition, the presence or recurrence of denial of the facts of the underlying offense.

The process of approving the use of sexually stimulating materials is fluid in nature and should be discussed with the client throughout the supervision and treatment process, and continued monitoring to assure the goals of promoting healthy sexual and community safety is necessary. The CST/MDT should rescind approval for access to sexually stimulating materials as dictated by the behavior of or any regression in treatment or supervision by the adult or juvenile who has sexually offended.

The conditions of probation and parole as well as the treatment contract may currently contain language prohibiting possession or use of most of the materials pertinent to this appendix. The conditions of probation are essentially orders of the Court once a judge signs them and cannot be changed or amended without authority of the court. Conditions of parole are similar in nature to probation and must be approved by the Parole Board. Therefore, any modification must be approved by the judge or parole board. The treatment contract of each agency is probably the easiest to amend of all the documents, as it is signed by the adult or juvenile who has sexually offended at the beginning of treatment. Any approval of the use of sexually stimulating materials must be reflected in a modification to the treatment contract and plan, and if allowable by order of the Court or Parole Board, reflected in the probation or parole file.

Healthy Sexuality:

Many treatment curriculums for adults and juveniles who have sexually offended include a component on the development of healthy sexuality. The following information is offered to approved treatment providers working with this population.

Sexual Expression

Human beings are sexual beings. Sexuality and sexual expression are integrally intertwined and inseparable from other fundamental human characteristics, specifically intimacy, interpersonal connectedness, belonging, and attachment. Healthy humans desire to be involved in relationships. Sexual expression is a part of intimate romantic relationships. Not everyone is capable of the reciprocity or other social skills that relationships entail, and often a sexual intimate relationship is not available to individuals for a number of reasons. However, therapy targets helping people move in the direction of being able to engage in reciprocal and mutual relationships.

Masturbation

Masturbation is often employed as a way to supplement sexual expression in a relationship or in lieu of being able to gratify sexual needs in a relationship. Masturbation (when not compulsive and done privately) is a natural and healthy practice to express sexuality and gratify or relieve sexual needs/tension. Masturbation can serve as a means of reducing sexual needs that could become expressed in less appropriate or more harmful ways. As people do masturbate, stimuli for masturbation need to be based on healthy themes, such as closeness, intimacy, mutuality, reciprocity, and safety. This does not rule out visual stimuli which are ubiquitous. Prohibiting stimulating materials is problematic and impossible. Instead it is a task of treatment to determine which materials are “inappropriate,” by not reinforcing the values and principles stated herein (e.g., mutuality, reciprocity, safety, etc.). On the other hand, stimuli that reinforce these values are not problematic. It is not the goal of treatment to eliminate sexuality or sexual expression, rather to direct it to appropriate themes.

Teaching Healthy Sexuality

Treatment providers address healthy sexuality in a number of ways. One way is by discussing sexual needs, preferences and expression in an open nonjudgmental manner. This serves as *modeling* in that the client can observe a therapist discuss sexuality in a mature, open and non-defensive manner; the client learns to do the same. Sexual expression needs to be discussed in a treatment setting.

Sexual Diversity

Cultural, social and individual differences are accepted in healthy sexuality and one shows respect for these differences. As long as it is not harmful activity, a healthy attitude is open to the fact that others have needs that are not like our own. Examples are represented in the G.L.B.T.Q. community; there should be no discrimination on the basis of orientation and preference when they are legal and not harmful to others.

Healthy Boundaries, Roles, and Safe Sex

Consent is quintessential to healthy sexual expression. Consent involves equality of the individuals to make informed decisions. People are always very different from one another but must be equal in their ability to consent to engage in sexual behavior with one another. Consent involves *communication in advance* of what will take place (sexual activity) between two individuals. It involves mutuality and reciprocity. Large disparities in power and influence are antithetical to these principles. Likewise, the needs and desires of both parties are negotiable and negotiated; an agreement is reached prior to the activity ensuing. Similarly, activities that are not permissible must be communicated and respected. Education related to issues of consent and barriers to consent including impairment due to alcohol or drug consumption, and the intellectual capacity of both parties should be addressed. Safe sexual practices are a requirement of healthy sexuality.

CONCLUSION:

This appendix has attempted to clarify the differences between sexually oriented or explicit materials from sexually stimulating materials. While the former is prohibited by terms and conditions of supervision and the treatment contract, the latter may be allowed at some point in treatment and supervision based upon the suggested criteria in this appendix. In addition, the exploration of concepts related to healthy sexuality are seen as critical for the therapeutic rehabilitation of the adult or juvenile who has sexually offended.

Appendix E: Guidelines for the Evaluation and Treatment of Sex Offenders with a Current Non-Sex Crime

The Evaluation Guidelines and Intervention Options Matrix for Sexual Offenders Who Meet the Definition Based upon a Current Non-Sex Crime and a History of Sex Crime Conviction or Adjudication (the Matrix) are to be utilized in the following circumstances:

- A. Per statute 16-11.7-102 (2) (a) (II) C.R.S., “A sex offender means any person who is convicted in the state of Colorado on or after January 1, 1994, of any criminal offense, if such person has previously been convicted of a sex offense as described in subsection (3) of this section in the state of Colorado, or if such person has previously been convicted any other jurisdiction of any offense that would constitute a sex offense as defined in subsection (3) of this section, or if such person has a history of any sex offense as defined in subsection (3) of this section.”

The Matrix should also be used for any sex offenders convicted of Failure to Register.

All sex offenders in the state of Colorado “as part of the presentence or probation investigation (are) required pursuant to section 16-11-103, to submit to an evaluation for treatment, an evaluation for risk, procedures required for monitoring of behavior to protect the victims, and potential victims, and an identification developed pursuant to section 16-11.7-103 (4).” Further, all sex offenders in the state of Colorado are required, as part of any sentence to probation, commitment to the Department of Human Services, sentence to community corrections, incarceration with the Department of Corrections, placement on parole, or out-of-home placement to “undergo treatment to the extent appropriate to such offender based upon the recommendations of the evaluation and identified made pursuant to section 16-11.7-104...”¹⁹⁴ Finally, it is noted that sex offenders sentenced to community supervision (probation or parole) may be supervised by specialized sex offender supervision officers and subject to some or all of the specialized terms and conditions of supervision developed for sex offenders.¹⁹⁵

¹⁹⁴ See 16-11.7-105 C.R.S.

¹⁹⁵ See 18-1.3-1007 C.R.S.

MATRIX PROTOCOL

Who Should Do the Evaluation/Treatment?

The Sex Offender Management Board (SOMB) bulletin: Applicability of the Adult or Juvenile Standards for Individuals Meeting the Definition of a Sexual Offender (16-11.7-102), which is dated June 5, 2014, states as follows:

Based on a number of recent inquiries, the staff of the Sex Offender Management Board (SOMB) is providing the information contained in this update as a clarification regarding the applicability of the Adult or Juvenile Standards given the age of the sexual offender (e.g., under or over age 18), the specific Court of record (e.g., Adult or Juvenile Court), and the specific referral offense (e.g., a sexual offense or a non-sexual offense for those with a history of a sexual offense). All of these factors assist in determining whether the Adult or Juvenile Standards are applicable for a specific case.

The Juvenile Standards apply in all cases where the case is being handled by the Juvenile Court, regardless of the age of the person (under or over age 18) adjudicated for a sexual offense. As a result, the only approved treatment providers, evaluators, and polygraph examiners authorized to work with this population are those listed under the Juvenile Standards. However, the Adult Standards apply in cases where individuals under the age of 18 are transferred to the Adult Court and prosecuted as adults. In this latter case, treatment providers, evaluators, and polygraph examiners listed under the Adult Standards must be utilized.

Given the confusion regarding the set of applicable Standards and the unique needs of young adults ages 18-25 who may be under the purview of either the Juvenile or Adult Standards, the SOMB has provided written guidance for these cases in a Young Adult Modification Protocol, which may be found at <http://dcj.somb.state.co.us/>.

A related issue is the determination of the appropriate assessment for use with a juvenile under the age of 18 who was convicted as an adult, or the adult over the age of 18 who was adjudicated for a juvenile sex crime. Regardless of the specific Standards, Adult or Juvenile, applicable in the given circumstances, approved evaluators and treatment providers must utilize assessment instruments designed specifically for the population on which they were normed and validated. For example, it is not appropriate to use certain adult risk assessment instruments on a juvenile under age 18 who was convicted as an adult and is subject to the Adult Standards. Similarly, it is not appropriate to use certain adult risk assessment instruments on an adult over the age 18 who was adjudicated for a juvenile sex crime committed prior to age 18, or for an adult over age 18 convicted of a non-sex crime who has a history of a juvenile adjudication prior to age 18. For guidance related to the assessment of risk in the latter scenario (e.g., adults convicted of a non-sex offense with a history of a prior juvenile adjudication for a sex crime), see the Evaluation Guidelines and Interventions Option Matrix and the Young Adult Modification Protocol, which may be found at <https://www.colorado.gov/dcj>.

This guidance is being offered to ensure that proper application of the Adult or Juvenile Standards occurs, and that risk assessment instruments are being used in a valid manner. Please direct any questions about the applicability of the Adult or Juvenile Standards, or specific

assessment tools, to the Adult Standards Coordinator at (303) 239-4499, or the Juvenile Standards Coordinator at (303) 239-4197.

Therefore, in terms of evaluating or treating sex offenders with a history of a sex crime:

- A. If the current non-sex crime, including Failure to Register, occurred after age 18, and the offender is convicted as an adult, regardless of when the original sex crime occurred, an adult listed provider shall complete the evaluation and treatment and an adult supervision officer will supervise the case.
- B. If the current non-sex crime, including Failure to Register, occurred prior to age 18 and the offender is adjudicated as a juvenile, a juvenile listed provider shall complete the evaluation and treatment and a juvenile supervision officer will supervise the case.

However, in the specific circumstance where an adult is convicted of a non-sex crime, including Failure to Register, with a history of adjudication for a sex crime that occurred prior to age 18, the following recommendation is offered as a best practice. Ideally, the evaluator and treatment provider in this case would have both adult and juvenile listed provider status in order to account for the unique aspects of sexual offending related to juveniles. The SOMB does recognize that many providers do not have both listing statuses and such a provider may not be available in all areas. In lieu of using an adult and juvenile listed provider, the adult listed provider shall consult with a juvenile listed provider and document such consultation regarding the evaluation and treatment.

Multi-Disciplinary Collaboration

The listed evaluator and treatment provider working with a client with a history of a sex crime shall consult with the offender's prior Community Supervision Team (CST)/Multi-Disciplinary Team (MDT) members, including any prior adjunct treatment providers, from the time of the sex crime conviction or adjudication if available. The information obtained, or the unsuccessful steps taken to attempt to obtain the information, shall be documented in the evaluation and treatment plan.

When completing an evaluation on a client with a history of a sex crime, the listed evaluator shall collaborate with the Pre-Sentence Investigation (PSI) Officer and work towards consensus for specific treatment and supervision (i.e. per 16-11.7-104 (1) C.R.S., the procedures for monitoring of behavior to protect victims and potential victims) recommendations (e.g., are sex offense-specific treatment and the frequently addressed specialized terms and conditions of supervision indicated or not, and if so, what type of treatment and terms and conditions). Consistent recommendations across the PSI and evaluation will allow the court the opportunity to consider these recommendations when sentencing the client with a sex crime history.

When consistent recommendations are not possible, then the listed evaluator and the PSI Officer should both identify their specific recommendations and note the nature of the disagreement. Following the final decision by the Judge, it is hoped that the listed treatment provider and supervising officer will be able to effectively collaborate under the terms of judicial decision-making.

If the evaluation of a client with a history of a sex crime is completed prior to the entering of a plea, a release of information should be secured to release the evaluation to the PSI Officer. In addition, the evaluation must be updated following adjudication or conviction on the non-sex crime based upon

the required collaboration with the PSI Officer noted above. If the original evaluator is unavailable to do such collaboration, a new evaluation that includes such collaboration must be conducted.

Training Requirement

Any listed evaluator or treatment provider who wishes to provide services to offenders with a history of a sex crime shall attend an SOMB required training on this population prior to beginning work with this population. The SOMB will make such training available on a regular basis.

Introduction to the Matrix

The following are guidelines for listed evaluators who are evaluating sexual offenders convicted of a non-sex crime (including Failure to Register) and have a history of a prior sex crime adult conviction or juvenile adjudication. Please note that the following guidelines are offered to assist listed evaluators in performing evaluations for this population and are not offered as a required protocol. Listed evaluators are free to continue to use professional discretion in evaluating this population within the requirements of the Colorado Sex Offender Management Board *Standards and Guidelines for the Assessment, Evaluation, Treatment and Behavioral Monitoring of Adult Sex Offenders* Section 2.000 (Standards for Sex Offense-Specific Evaluations). In addition to the following evaluation guidelines and intervention options, listed evaluators are encouraged to consider factors such as the nature of the original sex crime and the length of time that has passed since the sex crime occurred when assessing intervention needs.

The Evaluation Guidelines and Intervention Options for Sexual Offenders Who Meet the Definition Based upon a Current Non-Sex Crime Conviction and a History of Sex Crime Conviction or Adjudication (the Matrix) is formatted in the following manner. For sexual offenders whose original sex crime adjudication (including deferred sentences and factual basis cases) occurred prior to age 18, even if the offender is now an adult, the first set of guidelines should be utilized. On the other hand, for sexual offenders whose original sex crime conviction (including direct file juveniles, deferred sentences, and factual basis cases) occurred after age 18 (except for direct file juvenile cases who are also included here), the second set of guidelines should be utilized. Please use the appropriate section of the Matrix for a given case.

As always in utilizing the Matrix, care should be given in application to females, persons with chronic mental illness, LGBT clients, certain ethnic groups, and persons with developmental, cognitive, and physical disabilities. Recommended guidelines and instruments may not be applicable to these populations, and the listed evaluator should use professional discretion with these populations.

Evaluation Guidelines and Interventions Option Matrix for Sexual Offenders Who Meet the Definition Based Upon a Current Non-Sex Crime and A History of Sex Crime Conviction or Adjudication (Including Deferred Sentences and Factual Basis Cases) Prior to Age 18:

There are five different intervention options (A, B, C, D, and E) for the Matrix. The listed evaluator should assess each consideration and then determine which option best fits the offender. A recommended intervention is then specified for each option. The options are not mutually exclusive and clinical judgment should be exercised to determine the best option given the evaluative review. Please note that a Quick Reference has been provided at the end of this appendix.

Options for Sex Offense Adult Convictions

Option A Considerations

- A. Successful completion of sex offense-specific treatment
- B. Non-violent index crime (no domestic violence)
- C. No current criminogenic needs as identified by current evaluation (utilizing clinical judgment and taking into account community safety issues)
- D. Index crime contains no components similar to original sex crime behavior and is non-sexual in nature
- E. Static risk factor from time of original sex crime conviction is low
- F. Low risk for sexual re-offense or general criminal re-offense (if actuarial risk assessments can be utilized) or the person presents with few dynamic risk factors (if actuarial risk assessments cannot be utilized)
- G. Failure to Register (FTR) - low level of intentionality to evade registration requirements

Option A Recommendations

- A. No specific treatment recommendations
- B. No additional terms and conditions for sex offender supervision

Option B Considerations

- A. Successful completion of sex offense-specific treatment
- B. Non-violent index crime (no domestic violence)
- C. Presence of current criminogenic needs as identified by current evaluation (utilizing clinical judgment and taking into account community safety issues)
- D. Index crime non-sexual in nature (details of the crime are not related or similar to details of the original sex offense)
- E. Static risk factor assessment from time of original sex crime conviction is low (if known)
- F. Low, moderate, or high-risk factor for general criminal re-offense but low risk for sexual re-offense (if actuarial risk assessments can be utilized) or the person presents with few dynamic sexual risk factors (if actuarial risk assessments cannot be utilized)

- G. FTR - low level of intentionality to evade registration requirements

Option B Recommendations

- A. Non-sexual treatment needs (e.g., anger management, medical evaluation, or substance abuse)
- B. No additional terms and conditions for sex offender supervision

Option C1 and C2 Considerations (asterisked items are considerations for placement in Option C1)

- A. There is no documentation of successful completion of treatment.
- B. No completion of treatment, but the client has been in the community offense-free for an extended period of time (e.g., 10 years)¹
- C. The non-sexual index offense is a violent crime/involves force (including, but not limited to, domestic violence) *
- D. The non-sexual index offense contains components similar to behavior in the original sex offense. (e.g., the original sex offense was burglarizing a woman's underwear from her apartment and the new offense is stealing underwear from the store)
- E. The client is determined to be a moderate or high risk for re-offense (if actuarial risk assessments can be utilized) or the person presents with a significant number of dynamic risk factors (if actuarial risk assessments cannot be utilized)
- F. The client is in Level Three Denial *Please note that denial alone is not a reason for automatic placement in Option C, D, or E and does not preclude placement in Option A or B*
- G. The client has deviant PPG or VT results*
- H. The client has an inability to demonstrate knowledge of treatment concepts either behaviorally (i.e. living a non-pro-social lifestyle) or verbally

Option C1 Recommendations

- A. All specialized terms and conditions for an adult sex offender, including the need to take a Child Contact Screen (CCS) in order to determine contact with own children. Specific jurisdictions handling of Court orders concerning contact with children (e.g., Burns) should be taken into consideration.
- B. Additional assessment process to include:
 - Sex history disclosure process
 - Polygraph

Time limited treatment refresher work

Areas to assess:

- a. Offense behavior chain including risk factors (red flags, triggers, etc.)
 - b. Pro-social relationship development (support system)
 - c. Support system development
 - d. Relapse prevention
 - e. Empathy development and victim impact
 - f. Coping skills
 - g. Problem solving
 - h. Mood Management
 - i. Boundaries
 - j. Healthy sexuality and intimate relationship development
 - k. Vocational skills/adaptive skills
3. Assessment of illegal, abusive and harmful sexual arousal/interest, if present
 4. Listed provider should use modified written agreement outlining expectations
 5. For offenders in significant denial, attempt to overcome resistance to treatment and denial issues
 6. Domestic violence - assess to determine treatment needs (sex offense, domestic violence, combination of two and/or harm to child)
 7. Client can be referred to another Option at any time
 8. Treatment provider to prepare written discharge summary upon completion of Option C with updated recommendations

Option C2 Recommendations

- A. Selected specialized terms and conditions for an adult sex offender as recommended appropriate by the evaluator. Clients in this Option are not required to complete a CCS prior to contact with their own children unless they transition to Option C1, D, or E. Specific jurisdictions handling of Court orders concerning contact with children (e.g., Burns) should be taken into consideration.

- B. Additional assessment process to include:
 - 1. Sex history disclosure process
 - 2. Polygraph
 - 3. Time limited treatment refresher work
 - 4. Areas to assess:
 - a. Offense behavior chain including risk factors (red flags, triggers, etc.)
 - b. Pro-social relationship development (support system)
 - c. Support system development
 - d. Relapse prevention
 - e. Empathy development and victim impact
 - f. Coping skills
 - g. Problem solving
 - h. Mood Management
 - i. Boundaries
 - j. Healthy sexuality and intimate relationship development
 - k. Vocational skills/adaptive skills
- C. Assessment of illegal, abusive and harmful sexual arousal/interest, if present
- D. Listed provider should use modified written agreement outlining expectations
- E. For offenders in significant denial, attempt to overcome resistance to treatment and denial issues
- F. Domestic violence - assess to determine treatment needs (sex offense, domestic violence, combination of two and/or harm to child)
- G. Client can be referred to another Option at any time
- H. Treatment provider to prepare written discharge summary upon completion of Option C with updated recommendations

Option D Considerations

- A. Did not successfully complete sex offense-specific treatment *This factor alone may not predicate placement in Option D
- B. Index crime is sexual in nature (index crime has sexual motivation/dynamics, i.e. burglary involving stealing women's underwear)
- C. FTR - higher levels of intentionality to evade registration requirements
- D. Presence of illegal, abusive or harmful sexual arousal/interest during current evaluative review (per Plethysmograph assessment, VT assessment or offender self-report)
- E. Presence of pedophilia, psychopathy, sexual sadism, or Sexually Violent Predator status
- F. The client is determined to be a high risk for re-offense (if actuarial risk assessments can be utilized) or the person presents with a significant number of dynamic risk factors (if actuarial risk assessments cannot be utilized)

Option D Recommendations

- A. Additional terms and conditions for sex offense supervision including no contact with own children unless a Child Contact Screen has been conducted
- B. Sex offense-specific/other treatment and intervention recommendations by listed evaluator, as applicable
- C. Assess for current treatment needs and address in treatment plan (only treat areas necessary)
- D. Treatment plan created upon potential length of sentence (include specific plans for sex history and maintenance polygraphs)
- E. Upon completion of Option D, a discharge summary outlining treatment plan completion and remaining areas not addressed based on sentence length limitations (not considered successful completion of SO specific treatment, but administrative completion)

Option E Considerations

- A. No motivation for treatment
- B. Refusal to participate in treatment
- C. No amenability to treatment
- D. Not treatable
- E. No motivation to change

- F. The client is determined to be a high risk for re-offense (if actuarial risk assessments can be utilized) or the person presents with a significant number of dynamic risk factors (if actuarial risk assessments cannot be utilized)
- G. Presence of pedophilia (exclusive type), psychopathy, sexual sadism, or Sexually Violent Predator status

Option E Recommendations

- A. Not appropriate for community based sex offense-specific treatment
- B. Not appropriate for community supervision and should be referred back to the court for possible modification of sentence

Options for Sex Offense Juvenile Adjudications (please note this section includes people who are currently juveniles with previous juvenile sex offense adjudication and people who are currently adults with previous juvenile sex offense adjudication)

Option A Considerations

- A. Successful completion of SO specific treatment
- B. Non-violent index crime (no domestic violence)
- C. No current criminogenic needs as identified by current evaluation (utilizing clinical judgment and taking into account community safety issues)
- D. Index crime contains no components similar to original sex crime behavior and is non-sexual in nature
- E. Low number of risk factors
- F. FTR - low level of intentionality to evade registration responsibility

Option A Recommendations

- A. No specific treatment recommendations
- B. No additional terms and conditions for sex offender supervision

Option B Considerations

- A. Successful completion of sex offense-specific treatment
- B. Non-violent index crime (no domestic violence)
- C. Presence of current criminogenic needs as identified by current evaluation (utilizing clinical judgment and taking into account community safety issues)

- D. Index crime non-sexual in nature (details of the crime are not related or similar to details of the original sex offense)
- E. Static risk factor assessment from time of original sex crime conviction is low (if known)
- F. Low, moderate or high-risk factor for general criminal re-offense but low risk for sexual re-offense (if actuarial risk assessments can be utilized) or the person presents with few dynamic sexual risk factors (if actuarial risk assessments cannot be utilized)
- G. FTR - low level of intentionality to evade registration requirements

Option B Recommendations

- A. Non-sexual treatment needs (for example, anger management, medical evaluation or substance abuse)
- B. No additional terms and conditions for sex offender supervision

Option C1 and C2 Considerations (asterisked items are considerations for placement in Option C1)

- A. There is no documentation of successful completion of treatment.
- B. No completion of treatment, but the client has been in the community offense-free for an extended period of time (e.g., 10 years)
- C. The non-sexual index offense is a violent crime/involves force (including, but not limited to, domestic violence). *
- D. The non-sexual index offense contains components similar to behavior in the original sex offense (e.g., the original sex offense was burglarizing a woman's underwear from her apartment and the new offense is stealing underwear from the store).
- E. The client is determined to be a moderate or high risk for re-offense (if actuarial risk assessments can be utilized) or the person presents with a significant number of dynamic risk factors (if actuarial risk assessments cannot be utilized)
- F. The client is in Level Three Denial *Please note that denial alone is not a reason for automatic placement in Option C, D, or E and does not preclude placement in Option A or B*
- G. The client has deviant PPG or VT results*.
- H. The client has an inability to demonstrate knowledge of treatment concepts either behaviorally (i.e. living a non-pro-social lifestyle) or verbally.

Option C1 Recommendations

- A. All specialized terms and conditions for an adult sex offender, including the need to take a Child Contact Screen (CCS) in order to determine contact with own children. Specific jurisdictions handling of Court orders concerning contact with children (e.g., Burns) should be taken into consideration.
- B. Additional assessment process to include:
 - 1. Sex history disclosure process
 - 2. Polygraph
 - 3. Time limited treatment refresher work
 - 4. Areas to Assess
 - a. Offense behavior chain including risk factors (red flags, triggers, etc.)
 - b. Pro-social relationship development (support system)
 - c. Support system development
 - d. Relapse prevention
 - e. Empathy development and victim impact
 - f. Coping skills
 - g. Problem solving
 - h. Mood Management
 - i. Boundaries
 - j. Healthy sexuality and intimate relationship development
 - k. Vocational skills/adaptive skills
- C. Assessment of illegal, abusive and harmful sexual arousal/interest, if present
- D. Listed provider should use modified written agreement outlining expectations
- E. For offenders in significant denial, attempt to overcome resistance to treatment and denial issues
- F. Domestic violence - assess to determine treatment needs (sex offense, domestic violence, combination of two and/or harm to child)

- G. Client can be referred to another Option at any time
- H. Treatment provider to prepare written discharge summary upon completion of Option C with updated recommendations

Option C2 Recommendations

- A. Selected specialized terms and conditions for an adult sex offender as recommended appropriate by the evaluator. Clients in this Option are not required to complete a CCS prior to contact with their own children unless they transition to Option C1, D, or E. Specific jurisdictions handling of Court orders concerning contact with children (e.g., Burns) should be taken into consideration.
- B. Additional assessment process to include:
 - 1. Sex history disclosure process
 - 2. Polygraph
 - 3. Time limited treatment refresher work
 - 4. Areas to Assess:
 - a. Offense behavior chain including risk factors (red flags, triggers, etc.)
 - b. Pro-social relationship development (support system)
 - c. Support system development
 - d. Relapse prevention
 - e. Empathy development and victim impact
 - f. Coping skills
 - g. Problem solving
 - h. Mood Management
 - i. Boundaries
 - j. Healthy sexuality and intimate relationship development
 - k. Vocational skills/adaptive skills
- C. Assessment of illegal, abusive and harmful sexual arousal/interest, if present

- D. Listed provider should use modified written agreement outlining expectations
- E. For offenders in significant denial, attempt to overcome resistance to treatment and denial issues
- F. Domestic violence - assess to determine treatment needs (sex offense, domestic violence, combination of two and/or harm to child)
- G. Client can be referred to another Option at any time
- H. Treatment provider to prepare written discharge summary upon completion of Option C with updated recommendations

Option D Considerations

- A. Did not successfully complete sex offense-specific treatment *This factor alone may not predicate placement in Option D
- B. Index crime is sexual in nature (index crime has sexual motivation/dynamics, i.e. burglary involving stealing women's underwear)
- C. FTR - higher levels of intentionality to evade registration requirements
- D. Presence of illegal, abusive or harmful sexual arousal/interest during current evaluative review (per plethysmograph assessment, VT assessment or offender self-report)
- E. Presence of pedophilia, psychopathy, sexual sadism, or Sexually Violent Predator status
- F. The client is determined to be a high risk for re-offense (if actuarial risk assessments can be utilized) or the person presents with a significant number of dynamic risk factors (if actuarial risk assessments cannot be utilized)

Option D Recommendations

- A. Additional terms and conditions for SO supervision including no contact with own children unless a Child Contact Screen has been conducted
- B. Sex offense-specific/other treatment and intervention recommendations by listed evaluator, as applicable
- C. Assess for current treatment needs and address in treatment plan (only treat areas necessary)
- D. Treatment plan created upon potential length of sentence (include specific plans for sex history and maintenance polygraphs)
- E. Upon completion of Option D, a discharge summary outlining treatment plan completion and remaining areas not addressed based on sentence length limitations (not considered successful completion of SO specific treatment, but administrative completion)

Option E Considerations

- A. No motivation for treatment
- B. Refusal to participate in treatment
- C. No amenability to treatment
- D. Not treatable
- E. No motivation to change
- F. The client is determined to be a high risk for re-offense (if actuarial risk assessments can be utilized) or the person presents with a significant number of dynamic risk factors (if actuarial risk assessments cannot be utilized)
- G. Presence of Pedophilia (Exclusive type), psychopathy, sexual sadism, or Sexually Violent Predator status

Option E Recommendations

- A. Not appropriate for community based sex offense-specific treatment
- B. Not appropriate for community supervision and should be referred back to the court for possible modification of sentence

MATRIX Quick Reference Guide

****Please note that this is a summary for people who are familiar working with MATRIX cases. This is not an exhaustive list, rather it is intended as a quick reference to inform mandatory clinical judgment. No one consideration mandates placement in any one Option². Please refer to the full set of guidelines if you are new to MATRIX cases or for additional information. Additionally, specific jurisdictions handling of Court orders concerning contact with children (e.g., Burns) should be taken into consideration. ****

The SOMB MATRIX protocol indicates five options related to recommendations in cases with referring non-sex charge (index crime) and previous sex offense conviction. These include the following:

- A. **Option A:** No sex offender treatment or terms and conditions recommended/required. No other treatment needs.

Considerations for Option A:

1. Successful completion of treatment
2. No current significant criminogenic factors

3. Length of time since original sex offense
4. FTR is committed with a low intentionality
5. Non-deviant VT or PPG
6. Non-violent index crime

B. Option B: No sex offender treatment or terms and conditions recommended/required, but other services recommended/required.

Considerations for Option B:

1. Successful completion of treatment
2. Presence of current significant criminogenic factors
3. Length of time since original sex offense
4. Non-sexual treatment needs (own victimization, mental health concerns, cognitive concerns, etc.)
5. FTR is committed with a low intentionality
6. Non-deviant VT or PPG
7. Non-violent index crime

C. Option C: Additional assessment period to assess client's working knowledge of sex offense treatment concepts, address dynamic risk factors, and complete sexual history polygraphs. This Option helps determine whether clients move to Option A, B, or D. Evaluators should determine if the client is appropriate for Option C1 or Option C2. Option C1 indicates that full terms and conditions of sex offender probation are appropriate, including no contact with the client's own children. Option C2 indicates that the evaluator should determine which terms and conditions are appropriate and which are not, including contact with client's own children.

Considerations for Option C1 and C2, asterisked items are considerations for placement in C1:

1. No documentation of treatment completion
2. Client reports they did not complete treatment
3. Index offenses involves physical violence*
4. High number of dynamic risk factors

5. Deviant PPG or VT results*
6. Level Three Denial (this does not mandate placement in Option C, D, or E, but should be considered)
7. Inability to demonstrate treatment concepts behaviorally or verbally (special attention paid to issues related to victim empathy/impact)

D. Option D: Sex offense-specific supervision terms and conditions and treatment required.

Considerations for Option D:

1. Did not complete treatment
2. FTR is committed with a high level of intentionality
3. Deviant VT or PPG results
4. Presence of pedophilia, psychopathy, sexual sadism, or Sexually Violent Predator designation, violent index offense

E. Option E: Client is not appropriate for community-based treatment or supervision.

Conditions for Option E:

1. No motivation for treatment
2. Refusal to participate in treatment
3. Not amenable to treatment
4. High number of risk factors
5. Deviant VT or PPG results
6. Presence of pedophilia, psychopathy, sexual sadism, or Sexually Violent Predator designation, violent index

Appendix F: Sex Offense-Specific Intake Review for Clients Who Have Been in Prior Treatment

Sex offense-specific Intake Review for Clients Who Have Been in Prior Treatment

The Colorado Sex Offender Management Board (SOMB) supports SOMB Listed Treatment Providers providing comprehensive intake assessments for clients seeking entry into a treatment program with a prior history of sex offense-specific (SOS) treatment. This document should be used as guidance in conjunction with the applicable SOMB Adult or Juvenile standards. The SOMB's purpose in developing this document is to ensure continuity of care via a thorough review of relevant prior treatment and supervision information to aid in the planning of treatment needs for the client. To this end, it is imperative that the Treatment Provider make every reasonable effort to identify and obtain past treatment records. In the absence of such records, it is the responsibility of the Treatment Provider to conduct a thorough and collaborative treatment review with the client to determine what treatment has been completed, what components of treatment need additional focus, and what components of treatment have not yet been completed. Through the completion of this review, a client's individual treatment needs can be determined. Clients should not be required to re-start treatment solely due to a change in Treatment Providers and the lack of available information from the prior Treatment Provider. On the other hand, mere completion of a treatment objective does not preclude the client from repeating such an objective if behavioral indicators suggest the need for additional treatment in this area.

The following information shall be reviewed collaboratively with the client to determine the starting point for the current treatment. It is recommended that this documented **be completed by the primary therapist** over the course of the first 2-3 sessions. This form may also be used for an on-going re-assessment of client treatment needs, as well as a final assessment at the time of discharge.

Client's Name:

DOB:

Therapist completing intake:

Date of intake:

Index Offense:

Past convictions / Adjudications:

Has the client previously received SOS treatment? Yes No

If yes, list previous providers:

Has the client signed releases to talk with previous treatment providers? Yes No

Length of time previously in treatment:

Does the client have any certificates of completion/documentation of treatment module completion? Yes No

If yes, list certificates/documentation:

Reason for discharge or transfer:

Have the following individuals been contacted for collateral information?

- Probation/Parole Officer Family Victim Therapist or DA's office Past Providers
 DHS Caseworker / DYC

What barriers or obstacles interfered with the client's successful engagement with the prior treatment, if any?

What factors aided the client in being successful in treatment? (What worked well?)

What are the client's strengths?

Have specialized assessments (Polygraph, PPG, ABEL/Affinity) been completed? Yes No

Identify and provide results:

What was the date of the last Sex offense-specific Evaluation?

Risk assessment results:

Results in terms of critical treatment needs:

Recommendations for treatment planning:

Current Risk Level:

Are there any specific conditions that have been previously set by the CST/MDT?

Provide details:

Are there any activities or special accommodations that have been previously approved by the CST/MDT?

Provide details:

Are there any approved safety plans in place at this time?

Provide details:

What recommendations have been made by previous treatment providers?

Which standards are applicable for the client? Adult Juvenile

For clients subject to Adult standards:

Yes	No	Partial	Accountability / Empathy
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Is the client is able to be accountable about their offense by openly discussing their offense without blame or minimization?
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Is the client able to discuss their full sexual history?
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Is the client able to identify and articulate the impact on their victims?
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Is the client able to articulate empathy for their victims?
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Does the client present with any level of denial?
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Is the client able to discuss and manage any illegal, abusive or harmful sexual urges or fantasies?
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Is the client able to discuss the clarification process and identify what steps they have taken?
Yes	No	Partial	Treatment
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Is the client able to identify their support system?
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Is the client able to educate their support system regarding their risk factors?
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Is the client able to discuss their thoughts, feelings and behaviors that facilitate sexual re-offense or other victimizing behaviors?
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Is the client able to identify and discuss adaptive and pro-social behaviors to prevent abusive behavior and are they able to articulate healthy sexual functioning?
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Is the client able to discuss personality traits and deficits related to their risk for re-offending?
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Is the client able to identify any deficits in their social and relationship skills?
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Has the client strengthened these skills?
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Is the client able to discuss a plan for preventing re-offense and can they discuss how they have shared this plan with their support system?
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Is the client able to discuss and demonstrate skills to manage issues of anger, power, and control?
Yes	No	Partial	Additional Information
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Has 5.700 criteria been met?
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Has a CCS been completed?
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Are there additional adjunct treatment needs? (i.e. substance abuse, suicidal ideation, mental health needs, cognitive needs or challenges, etc.):

			How have these needs been addressed in the past? How will these needs be addressed at this time?
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Has a relapse prevention plan or Personal Change Contract been completed?
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Is there a Qualified Approved Supervisor? (as defined in standard 5.710)
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Is there an Approved Community Support Person (as defined in standard 5.710) or COSA who has or is currently able to provide support to the client? (include any training or classes the person or group has completed)
<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Are there documented provisions that have been granted to the client previously? (i.e. contact with children, access to internet, approved activities, etc.)

Upon completion of the intake review provide a brief narrative regarding how the above information was gathered and verified beyond solely client self-report. Include information about how the client is able to demonstrate internalization of treatment concepts.

Based upon the information gathered during the intake review the following recommendations are made regarding the current focus of treatment.

 SOMB Treatment Provider - signature

 SOMB Treatment Provider - printed name

 Client - signature

 Client - printed name

 Supervisor - signature (where applicable)

 Supervisor - printed name

Appendix G: SOMB Position Paper Regarding a Sex Offender's Contact with His or Her Own Child

Colorado Sex Offender Management Board (SOMB) Position Regarding A Sex Offender's Contact with His or Her Own Child Approved March 18, 2016

Currently, in the State of Colorado, a person defined as a "sex offender" in C.R.S. §16-11.7-102 (2) and required to complete sex offense-specific treatment under the SOMB's *Adult Standards and Guidelines for the Assessment, Evaluation, Treatment and Behavioral Monitoring of Adult Sex Offenders* (herein referred to as *Standards & Guidelines*) is not allowed contact with his or her own child,¹⁹⁶ unless one of two conditions are met:

1. The offender meets the criteria for a Child Contact Screen (CCS), completes the evaluation process with favorable recommendations, and the Community Supervision Team adopts those recommendations; or
2. The offender engages in treatment and meets the criteria as outlined in 5.700 of the *Adult Standards and Guidelines for the Assessment, Evaluation, Treatment and Behavioral Monitoring of Adult Sex Offenders* (herein referred to as *Standards & Guidelines*).

The recent Court ruling in the *United States vs. Burns*, 775 F.3d 1221 (10th Cir. 2014) impacts Colorado's current approach to parent-child contact and therefore necessitates Colorado re-evaluate its approach. In *Burns*, the Court ruled that a parent has a constitutional right to familial association. In part, "A father has a fundamental liberty interest in maintaining his familial relationship with his [child]." *Burns* at 1223, citing *United States v. Edgin*, 92 F.3d 1044, 1049 (10th Cir. 1996). The Court continued, stating that "When a court imposes a special condition that limits a fundamental right or liberty interest, the court must justify the condition with compelling circumstances."¹⁹⁷ A conviction, alone, may not meet the criteria for compelling evidence for restraining a parent's constitutional right to parental association.

In light of this recent ruling, lawyers, probation officers, evaluators and therapists, among others, must determine how to best assist the Judge in making informed decisions. Courts must balance a parent's constitutional right to parental association with concerns of posing undue risk to the children of sexual offenders.

¹⁹⁶ Per Section 5.715 of the *Standards and Guidelines*, an own minor child is defined as "a minor child with whom the offender has a parental role, including but not limited to, biological, adoptive, and step-child(ren)." In addition, per the *United States vs. White*, 782 F.3d 1118 (10th Circuit 2015), an emphasis is given to those who have a "custodial" relationship with their own child.

¹⁹⁷ *Id.*

In order to assist the Courts in determining whether or not compelling circumstances to limit such contact exist, it is now recommended that evaluators add information to the sex offense-specific evaluation discussing the risk factors that may impact the risk a client poses to his/her child(ren). The SOMB recognizes there are few empirically identified risk factors that predict a convicted sex offender's risk for sexually offending against his/her own child. The discussion should rely on the research supported evidence regarding risk of sexual re-offense and should include potential risk for the offender to victimize across gender and age categories.¹⁹⁸ This section should explain how these factors may or may not translate to risk of a new sexual offense against a child. Protective factors are important and should be considered. The suggested risk factors that are consistently identified in research, and that may be relevant to identify and discuss in the evaluation, include, but are not limited to:

1. Risk Level for sexual recidivism¹⁹⁹
2. Number of convictions for sexual offenses²⁰⁰
3. Number of sexual offenses (does not have to be a conviction) involving minors²⁰¹
4. The nature of the relationship of the offender to the victim(s)²⁰²
5. Number of victims²⁰³
6. Age and gender²⁰⁴

14. Years sex offense free in the community²¹²

Some of the above risk factors are also identified in other sections of the sex offense-specific evaluation. However, it may be helpful to summarize those factors specifically related to an offender's contact with his or her own child.

In addition, it is recognized that the necessary information to discuss each listed factor may not be available at the time of the sex offense-specific evaluation. In those circumstances, it is appropriate to note the limitations of the available information.

This information should be clearly identified in the sex offense-specific evaluation. Please note, evaluators are not required to make a recommendation either for or against such contact, unless the evaluator chooses to include such a recommendation, but rather to provide information to assist a judge in decision formulation.

Appendix H: Disaster Emergency Management Safety Plan

DISASTER EMERGENCY SAFETY PLAN (DESP)

___ Judicial District, Adult Probation Department, Parole Region, or Community Corrections Facility

And/or

_____ Law Enforcement Agency

Sex Offender Unit

Name: _____ Telephone Number: _____

Supervising Officer: _____ Telephone Number: _____

Treatment Provider: _____ Telephone Number: _____

Other Therapist: _____ Telephone Number: _____

In the event of a disaster (a natural or man-made event that negatively affects life, property, livelihood such as a fire, flood, weather event, etc.), I will implement the following Emergency Management Plan as developed with my supervising officer. I understand that all of the terms and conditions of registration and supervision, including no contact with children and victims, still remain in full force. I understand that my plan must include going to a safe location that does not violate my terms and conditions of supervision (e.g. no schools or other places where children, or my victim may be present), and that I am to remain accountable for all of my other safety plans and treatment requirements (e.g. treatment attendance, taking required psychotropic medication, checking in on schedule, etc.). Finally, I understand that a more comprehensive emergency risk management plan will be developed later with my treatment provider.

In the event of a disaster, I agree to keep in touch with my supervising officer and the other members of any community supervision team (CST) I may have. In addition, I agree to keep the following persons informed, on a daily basis, of my whereabouts, leaving good contact information with each of them.

In case of emergency, I will keep in daily contact with at least one of the following:

(1) Name: _____ (2) Name: _____

Address: _____ Address: _____

Phone: (c) _____ Phone: (c) _____

(w) _____ (w) _____

(h) _____ (h) _____

[This person should reside outside of the impacted area]

(3)

Name: _____

The following list will remain off limits.

Address: _____

Phone: (c) _____

(w) _____

(h) _____

The overriding purpose of this emergency plan is to keep me and the public safe. Compliance with this plan by keeping in touch with my supervising officer and community supervision team will help keep me in compliance with my legal obligations by following the directives of my supervisors.

In an emergency, were my home not available for me to reside in, I intend to stay temporarily at one of the following locations:

I understand that if I have no other place to go that is safe and legal, then I will report to the local shelter and disclose my registration status to the shelter staff and law enforcement at the time I enter. I will take responsibility for contacting law enforcement immediately upon arrival at any shelter. I agree to follow all law enforcement instructions regarding housing and notifying my supervisor of any instructions that I receive.

My supervisor's agency contact or on call supervisor's number is _____.

Signature _____ Supervising Officer _____

DATE: / / .

Date: / / .

Keep a copy of this Disaster Emergency Safety Plan with your other important papers.

Appendix I: Guidance to SOMB Listed Providers on the Use of Medical Marijuana, Prescription Medications and Over the Counter Medications by Sexual Offenders

Approved January 15, 2016

Recent legislation has impacted the use of medical marijuana by sexual offenders on probation. Probation officers are complying with this legislation.

House Bill (H.B.) - 15-1267

Pursuant to H.B. 15-1267, individuals on probation, including those convicted of a sex crime, are generally permitted to possess or use medical marijuana if they have a valid medical marijuana card. There are two exceptions to the individual being allowed to use medical marijuana:

- A. If the crime for which the probationer was convicted is a violation of Article 43.3 of Title 12, C.R.S. (Colorado Medical Marijuana Code), the probationer cannot use/possess medical marijuana. This is not discretionary on the part of the judge.
- B. The law provides that the court, on a discretionary basis, may prohibit use/possession if the "court determines, based on the assessment as required by section 18-1.3-209, a prohibition against the possession or use of medical marijuana is necessary and appropriate to accomplish the goals of sentencing as stated in 18-1-102.5." Probation officers are to provide the court with pertinent information regarding the assessment, and the court reaches a decision after considering the results of the assessment as well as the goals of sentencing.

Providers who have concerns about abuse/dependence may share those concerns with the probation officer, however, those concerns will not change the fact that a court's discretion relative to the use/possession of medical marijuana is extremely limited.

Guidance to SOMB Listed Providers On the Use of Medical Marijuana, Prescription Medications, and Over the Counter Medications by Sexual Offenders

In light of H.B. - 15-1267, the SOMB is offering the following guidance to SOMB Listed Providers. It is not uncommon for a client of therapeutic services to be under the care of a physician and be prescribed

medication. This medication can be in the form of prescription narcotics for pain management, prescription psychotropic medication for mental health symptoms, or even medical marijuana. It is important for mental health professionals to consult with the client's medical provider to determine the effects of the medication, possible side effects, and potential impacts to the therapeutic process.

The Colorado Mental Health Practice Act (12-43-208 and 12-43-209) specifically prohibit a mental health professional from "engaging in the practice of medicine" or to "advise a client with reference to medical problems." The mental health professional should, however, assess during treatment sessions if a client's decision-making and judgement are affected by medication use. A client cannot be impaired during treatment and needs to be able to focus, be present, participate, and track content of treatment sessions. The prescription of a medication or medical marijuana by a physician does not prohibit a SOMB Listed Provider from also determining as necessary whether the medication or medical marijuana use is being abused by the client. The various ethical codes of conduct, including the American Counseling Association, discuss the "inability of incapacitated adults to give consent." In these cases the mental health professional should discuss the concerns with the client and other members of the treatment team to determine the best course of action.

Specific Guidance Regarding Medical Marijuana and Clients in Treatment for a Sexual Offense

Obtain Information from the Probation Officer

SOMB listed providers, in conjunction with the Community Supervision Team (CST), or Multidisciplinary Team (MDT), should obtain information from the probation officer regarding the allowance or prohibition of medical marijuana use while under court supervision.

SOMB Listed Providers Agency Policies

Ethical standards allow mental health professions, including SOMB Listed Providers, to determine which clients they accept, or do not accept, into treatment, and whether their program has policies or protocols in place to address client impairment due to substance or medication use, including medical marijuana.

Confidentiality of the Marijuana Registry

It is important to keep in mind that per the State Court Administrator's Office, a sex offender's "status on the medical marijuana registry is not public information. It is a class 1 misdemeanor to release or make public confidential information from the marijuana registry. Therefore, if the information regarding a person's status is to be released, it is important to secure a signed release of information from the client before doing so, or place with communication with the court under confidential cover."²¹³

Testing and Assessment Considerations

Medical marijuana usage by clients in sex offense-specific treatment may affect their polygraph results. Therefore, the use of medical marijuana by clients subject to polygraph assessment should be discussed with the polygraph examiner and prescribing physician. The CST/MDT should make a determination about the suitability of a client for assessment utilizing polygraph, plethysmograph, VRT, and alternative monitoring and accountability measures.

²¹³ Memorandum from the State Court Administrator's Office (DPS 09-01, March 5, 2009).

Appendix J: Notice of Discharge Status Form

INSTRUCTIONS TO THERAPISTS FOR DISCHARGE STATUS FORM:

At the time of discharge from treatment, *print or type* the information requested by the form and sign in the signature block. Please select all applicable boxes to indicate status at time of discharge. Where text is underlined, please circle one option, e.g., have / have not.

The form is to be filed in the court and under the case number ("M" or "CR") where the client was ordered to register as a sex offender. The address for each County and District Court in Colorado is to be entered in the caption and is available under "Find a Court" at: <http://www.courts.state.co.us/>

This form may be filed with the court in person at the courthouse or submitted via U.S. Mail to the Clerk's Office at the court's mailing address. A Probation Officer may also assist you in properly filing this form with the court.

PURPOSE OF THIS DOCUMENT:

In Colorado, some clients will not become eligible or file a petition to be taken off the sex offender registry until many years or decades after their sentences have terminated. This form allows a therapist to share information with the court about a defendant's status at the time of termination from treatment and while authorizations remain in effect allowing the therapist to divulge this otherwise confidential information to the court.

Unlike most other records, court files are maintained forever. Consequently, by logging this information in the court record, it will remain available to clients and other parties to the case, in the court's discretion. Therapists are being asked to provide this documentation to ensure the client's involvement in treatment is part of the permanent court record and, if appropriate, may be considered by the court in future decision-making.

If the therapist would like to further expand on his/her description of the client's participation in treatment, s/he may attach a letter or report explaining his/her position more fully. Any documents received by the court under seal cannot be viewed by anyone else without subsequent court orders authorizing release.

See next page for complete form.

Appendix L-1: The Use of Phallometry, Viewing Time, and Polygraphy to Support Information-Gathering for Assessments

Taken from the ATSA Ethical Standards and Principles for the Management of Sexual Abusers, the Association for the Treatment of Sexual Abusers 2014, (PP. 26-28, and 75-78).

- 7.00 Members recognize that research-supported assessment methods such as phallometry and viewing time may be useful for (a) obtaining objective behavioral data about the client that may not be readily established through other assessment means; (b) exploring the reliability of client self-report; and (c) exploring potential changes, progress relative to treatment and other case management goals and objectives. Members appreciate that the polygraph for which reliability and validity questions remain may have utility in facilitating disclosure about sexual history, offense-specific behaviors, and/or compliance with treatment and other expectations.
- 7.01 Members obtain specific informed consent from clients prior to using phallometric, viewing time, and/or polygraph methods.
- 7.02 Members are familiar with the strengths and limitations of phallometric, viewing time, and polygraph methods (see Appendix B)²¹⁴ and note these issues when interpreting and communicating the findings from these methods.
- 7.03 Members take reasonable steps to obtain assurances that examiners utilizing phallometric, viewing time, and polygraph methods are appropriately trained in the use of such methods, use accepted methods, and adhere to applicable professional/discipline-specific standards or guidelines.
- 7.04 Members recognize that the findings from phallometric, viewing time, and polygraph methods are to be used in conjunction with other sources of assessment information, not as the single source of data for any assessment.
- 7.05 Members recognize that the results of phallometric, viewing time, and polygraph methods are not to be used as the sole criterion for the following:

²¹⁴ Appendix B of 2014 ATSA Ethical Standards and Principles for the Management of Sexual Abusers, the Association for the Treatment of Sexual Abusers.

- A. Estimating level of risk for recidivism;
- B. Making recommendations for release to the community from a correctional, institutional, or other non-community placement;
- C. Determining treatment completion; or
- D. Drawing conclusions regarding compliance with or violations of conditions of release or community placement.

7.06 Members appropriately limit phallometry to the following purposes:

- A. Assessing the client's relative sexual arousal and preferences regarding age and gender;
- B. Evaluating the client's arousal responses to various levels of sexually intrusive or aggressive/coercive behaviors;
- C. Exploring the potential role of offense-related sexual arousal in the client's sexually abusive or at-risk behavior and developing accompanying treatment goals; and
- D. Monitoring the effectiveness of interventions involving the modification, management, and expression of both healthy and offense-related sexual arousal.

7.07 Members appropriately limit the use of viewing time measures to the following purposes:

- A. Assessing the client's sexual interests with respect to age and gender;
- B. Exploring the potential role of offense-related sexual interests in the client's sexually abusive or at-risk behavior and developing accompanying treatment goals; and
- C. Monitoring the effectiveness of interventions involving the modification, management, and expression of both normative and offense-related sexual interests.

7.08 Members appropriately limit use of the polygraph to the following purposes:

- A. Facilitating a client's disclosure of sexual history information, which may include sexually abusive or offense-related behaviors (generally disclosed in the interview portion of the examination);
- B. Eliciting from the client clarifying information regarding the instant/index offense;
- C. Exploring potential changes, progress, and/or compliance relative to treatment and other case management goals and objectives (through yes/no questions about adherence to specific treatment and other case management expectations); and/or
- D. Making collaborative case management decisions about a client with other partners and stakeholders based on the information gleaned from the examination and interview.

Polygraph testing involves a structured interview during which a trained examiner records several physiological responses of the examinee. Following this interview, the examiner reviews the charted record and forms opinions about whether the examinee was non-deceptive or attempting deception when answering each of the relevant questions. Many regions and jurisdictions do not utilize polygraphy for a variety of reasons, including empirical questions about its reliability and validity, yet in many other jurisdictions it is a widespread practice.

Post-conviction sex offender polygraph testing is a specialized form of general polygraph testing. Although all principles applicable to general polygraph testing also apply to post-conviction sex offender testing, its unique circumstances generate additional challenges. Using post-conviction sex offender testing responsibly requires members to have at least a rudimentary understanding of how the polygraph works, its advantages and limitations, and special considerations related to its integration into work with individuals who have engaged in sexually abusive behaviors. As with any instrument or procedure, members should be familiar with current literature and obtain appropriate training before using or interpreting polygraph results.

Post-conviction sex offender testing is intended to serve the following objectives:

- A. Facilitate a client's disclosure of sexual history information, which may include sexually abusive or offense-related behaviors (generally disclosed in the interview portion of the examination);
- B. Eliciting from the client clarifying information regarding the instant/index offense
- C. Exploring potential changes, progress and/or compliance relative to treatment and other case management goals and objectives (through yes/no questions about adherence to specific treatment and other case management expectations); and/or
- D. Making collaborative case management decisions about a client with other partners and stakeholders based on the information gleaned from the examination interview.

Some research indicates that the polygraph examination can lead to clients providing increased information regarding their sexually abusive behaviors; however, as has been mentioned, test validity and reliability often vary widely across studies. Examiner and examinee characteristics, treatment milieu, instrumentation, procedures, examination type, base rates of attempted deception in the population being tested, and other idiosyncratic factors can also affect reliability and validity. Therefore, it is important for providers to become informed about types of tests that produce the most accurate findings. As well, it is possible that some of the information obtained through post-conviction sex offender testing might be fictitious, representing an accommodation to pressure for disclosures. The third objective of post-conviction sex offender testing –to gauge enhanced supervision and treatment compliance – has received only limited empirical attention.

Members' primary purpose for collecting sexual history information is to further inform, as a complement to other assessment data, clinical interventions and other management strategies. The usefulness of post-conviction sex offender polygraph testing as a "clinical" tool is based on its potential to elicit historical information, thus arguably allowing psychosexual behavioral

patterns to be more fully revealed, better understood, and therefore more effectively managed and changed.

The American Polygraph Association, The National Association of Polygraph Examiners, and other polygraph associations have developed standards for certifying polygraph examiners who work in the management and treatment of sexual abusers, as well as standards for administering sexual abuser tests. Some states also regulate post-conviction sex offender testing standards and procedures. Members are familiar with laws, state regulations, and association guidelines governing post-conviction sex offender testing where they practice. Members work with examiners who meet certificate requirements and adhere to procedures recommended by a relevant polygraphists' organization.

Four types of post-conviction polygraph exams are commonly performed with individuals who have engaged in sexually abusive behavior:

- A. Instant/Index Offense Tests are designed to explore and clarify discrepancies between the client's and the official descriptions of the conviction offense(s).
- B. Sexual History Disclosure Tests are designed to facilitate a client's disclosure of sexual history information, which may include sexually abusive or offense-related behaviors, to their treatment provider prior or subsequent to the polygraph examination itself.
- C. Maintenance/Monitoring Tests are designed to explore potential changes, progress, and/or compliance relative to treatment, supervision, and other case management goals, objectives, and expectations, based on specific yes/no questions pertaining to very specific and narrow expectations and goals that have been established.
- D. Specific Issue Tests are generally designed using a yes/no format to explore a client's potential involvement in a specific prohibited behavior, such as unauthorized contact with a victim at a particular time.

Polygraph test accuracy is believed to be greatest when examiners focus on highly specified (i.e. single issue, narrow, and concrete) questions. Members cooperate with examiners in structuring tests that are responsive to program needs without unnecessarily compromising accuracy considerations.

Members must ensure that limits of confidentiality are fully disclosed to clients prior to polygraph testing, and that clients are afforded the opportunity for informed consent, specifically with respect to the ways in which the findings will be used and to whom the findings will be provided. Client disclosures of potentially incriminating information to mandated reporters can, lead to future prosecution. Members inform clients, in writing, of this potential dilemma and how it is addressed in their jurisdiction and program.

There is very limited empirical research on the use of polygraph with clients who have developmental disabilities and clients with low/borderline IQs. Therefore, further caution is advised if members use the polygraph for assessment, treatment, and management processes with these clients.

As noted in the main body of this document, polygraph examination is not used as the sole criterion for determining illegal, abusive and harmful sexual interests, estimating a client's risk for engaging in sexually abusive behavior, recommending whether a client be released to the community, or deciding whether a client has completed a treatment program or to change a client's treatment status. When the polygraph is utilized, findings are to be interpreted in conjunction with other relevant information to inform decision making.

Appendix L-2: APA Model Policy for the Evaluation of Examinee Suitability for Polygraph Testing

Model Policy for the Evaluation of Examinee Suitability for Polygraph Testing²¹⁵

1. Statement of purpose. This Model Policy is intended to assist polygraph examiners, referring professionals, program managers, law enforcement agencies and governmental organizations to make better decisions regarding the suitability of potential polygraph examinees to undergo testing that will further the goal(s) for which the testing is being considered. Policies regarding the assessment of examinee suitability are intended to protect examinees from undergoing examinations for which there is no potential benefit to themselves or their communities, and to avoid expenditure of resources for examinations that may not contribute to the goals of an investigation, candidate screening, risk assessment or risk management. This Model Policy should assist field examiners to make more effective and expeditious judgments about whether or not to proceed with an examination when there are questions about the suitability of an examinee.
2. Scope of authority. Examiners should be responsible for knowing and adhering to all legal and regulatory requirements. In the case of any conflict between the Model Policy and any legal practice requirements, the legal regulations should prevail. Examiners who work in jurisdictions and programs without local regulations should refer to this Model Policy as a guide.
3. Goals of testing. Polygraph testing is a decision support tool intended to add incremental validity to investigative and evidentiary decisions, and to risk assessment and risk management activities. Polygraph testing and polygraph test results should not replace or supplant the need for professional decision making. Any or all of the following objectives should be considered a sufficient reason to complete polygraph testing:
 - A. Increased disclosure of information;
 - B. Increased deterrence of problems (e.g., non-compliance or unsuitable persons);
 - C. Increased detection of involvement or non-involvement in problem behaviors or criminal activities.

²¹⁵ American Polygraph Association (2012). *Model Policy for the Evaluation of Examinee Suitability for Polygraph Testing*. [Electronic version] from <http://www.polygraph.org>.

4. Examinee suitability. Persons who are suitable to undergo polygraph testing should minimally meet the following requirements:
 - A. Age 12 or older.
 1. Functional maturity should be considered more important than chronological age when assessing suitability for polygraph testing. This Model Policy recommends that testing of an examinee should only occur when the person's Mean Age Equivalence (MAE) or Standard Age Score (SAS) is equivalent to that of a youth age 12 years or older, as determined through standardized psychometric testing (e.g., IQ testing, achievement and/or adaptive functioning), or when there is reasonable certainty the person is not functionally or developmentally impaired (e.g., developmental disorder, learning disorder, or serious emotional disturbance).
 - B. Adequate abstract thinking, as demonstrated by awareness of the context of the examination referral (i.e. reasons for the testing);
 - C. Insight into their own and others' motivation, as demonstrated by the ability to express basic reasons for being honest or dishonest and the basis for the concerns of the referring professional or retaining persons;
 - D. Possess a basic understanding of right from wrong, as demonstrated by an ability to verbalize potential reasons for being honest or dishonest, and the potential consequences for dishonesty or truthfulness;
 - E. Understand the difference between truth and lies, as demonstrated by the ability to recognize, describe or identify incidents, circumstances, or examples of lying and dishonesty;
 - F. Anticipate rewards and consequences for lying and behavior, an ability to verbalize potential rewards and consequences for honesty or dishonesty to the examination questions or other contexts; and
 - G. Maintain consistent orientation to date, time, and location, as demonstrated by independent functioning sufficient to transport oneself to the examination location at the scheduled date and time. (Examiners should rely on professional information sources to determine orientation or disorganized functioning when examinees are residing in or transported from institutional or secured settings.)
5. Unsuitability for polygraph. Examiners should not conduct polygraph examinations on individuals determined to be unsuitable. When available, examiners should consider psychological diagnostic information. Individuals deemed unsuitable for polygraph testing should not be tested until the identified conditions have improved, and when the individual is able to adequately attend to the examination context. Conditions that should preclude an examinee from suitability for polygraph testing include the following:

- A. Psychosis (e.g., lack of contact with reality, including hallucinations or delusional thinking) or psychotic condition that is active, un-treated, or un-managed at the time of the examination;
 - B. Mean Age Equivalence (MAE) or Standard Age Score (SAS) is below 12 years, as determined through standardized psychometric testing (e.g., IQ testing, achievement and/or adaptive functioning);
 - C. Severe mental retardation or measured IQ less than 55, as determined through standardized psychometric testing (e.g., IQ testing, and/or adaptive functioning);
 - D. DSM Axis V Global Assessment of Functioning (GAF) score of 50 or less, (e.g., persons who require continuous observation or assistance due to psychiatric or developmental conditions);
 - E. Any DSM Axis I mental health condition to include a severity specifier of “severe” or “with psychotic features” (i.e. indicative of a high potential adverse outcome) for any disorder; acute serious injury or illness, involving acute pain or distress; or
 - F. Observable impairment due to the influence of prescribed or non-prescribed controlled substances including alcohol.
6. Special populations. Examiners should conduct all examinations in a manner that is sensitive to any medical, mental health or developmental issues that may affect the examinee's functioning or the quality of the examination data. There is no published research or theoretical rationale suggesting that any medical, mental health, or developmental issues would result in erroneous examination results for individuals who meet the normal functional requirements for polygraph examinees. Ethical professional and empirical practices suggest that the application of normative data and normative interpretation rules to exceptional individuals (i.e. persons whose functional characteristics are outside the normal range of individuals in an intended population or sample) should always be regarded with caution.
- A. Medical. Persons with some acute or chronic medical/physical conditions may be regarded as marginally suitable for polygraph testing, at which times the test results should be accordingly qualified and viewed with caution. However, there is no published research or theoretical rationale suggesting that any medical conditions would interfere with the polygraph test or that polygraph testing would interfere with known medical conditions.
 - 1. Except as precluded by law or regulations, examiners should note in the examination report any diagnosed acute or chronic medical condition. Medical conditions, including stable injuries, depending on their severity, do not necessarily preclude an individual from being suitable for polygraph testing. However, it may at times be advisable to delay polygraph testing until the prospective examinee's health has improved.
 - 2. Examiners should defer to medical professionals when determining the suitability of prospective examinees that are pregnant. Examiners should require a statement or waiver from a physician, or other medical professional, attesting to the fact that the pregnancy is normal and uncomplicated with no expected reason that polygraph testing

would interfere with the pregnancy. Examiners should delay polygraph testing of any individual determined to be experiencing a medically complicated or high-risk pregnancy.

B. Medications. Persons who require the administration of multiple prescription medications to manage the potentially overwhelming effects of a diagnosed medical or mental health condition may be regarded as marginally suitable for polygraph testing. Test results for these individuals should be accordingly qualified and viewed with caution.

1. There is no theoretical rationale or published research suggesting that any medications would result in erroneous polygraph examination results. Clinical commonsense suggests that persons who function optimally while taking prescription medications may produce polygraph examination data of optimal interpretable quality while taking medications as directed by a doctor. There is no way to predict the exact effects of medications for any individual. Medication effects may vary with the types and numbers of medication, dosages, length of time on medications, in addition to the individual's physiology. Some increase in inconclusive results may occur from some medications, however, medications do not act differentially among the polygraph test questions, and no known increase in decision errors is expected from medication use.
2. Except as precluded by law or regulations, examiners should note in the examination report a list of the examinee's reported prescription medications, and any corresponding acute or general medical health conditions, including the absence of understanding of the reasons for a prescription medication.
3. Examiners should advise examinees who take prescriptions to take all prescription medications as prescribed by their medical or psychiatric provider.

C. Psychiatric. Persons who are actively psychotic should not undergo polygraph testing. However, individuals may be tested when their psychiatric conditions have stabilized. Individuals diagnosed with psychotic mental health disorders should be viewed as marginally suitable for polygraph testing. Test results for these persons should be reported as qualified and the test results should be viewed with caution.

1. Except as precluded by law or regulations, examiners should note in the examination report any examinee that reports being diagnosed with a serious mental health condition, including medically or age-related dementia/delirium, and the use of psychotropic medications. Psychiatric conditions do not necessarily preclude an individual from being tested; although it may be important to delay polygraph testing until the individual's psychiatric issues are stable or effectively managed.
2. Examiners should not test persons who require continuous observation or assistance until the individual's psychiatric and functional stability has improved.

D. Developmental. Persons with diagnosed developmental disorders should not be tested unless it can be reasonably expected that the goals of the program, investigation, agency, or individual can be met by the polygraph testing, and that the testing process will not jeopardize the health or safety of the examinee. These individuals should be viewed as

marginally suitable for polygraph testing. Their test results should be accordingly qualified and viewed with caution.

1. Examiners should determine suitability on a case-by-case basis for prospective examinees that have diagnosed developmental disorders, such as serious impairment in cognition/memory, learning, language, communication, conceptual functioning, or temporal/organization deficits.
2. Persons whose functioning is profoundly limited (e.g., whose measured IQ is less than 55), should be regarded as unsuitable for polygraph testing.

Model Policy for Post-Conviction Sex Offender Testing - Revised March 2018

- 1) Suitability for testing. Suitable examinees should, at a minimum, be expected to have a capacity for;
 - A. Abstract thinking;
 - B. Insight into their own and others' motivation;
 - C. Understanding right from wrong;
 - D. Telling the basic difference between truth and lies;
 - E. Anticipating rewards and consequences for behavior; and
 - F. Maintaining consistent orientation to date, time, and location.
- 2) Medications. Examiners should obtain and note in the examination report a list of the examinee's prescription medication(s), any medical or psychiatric conditions, and any diagnosed acute or chronic medical health conditions.
- 3) Trauma and dissociation. Examiners should consult with other professional members about a client's history on trauma and dissociation and proceed with caution.
- 4) Unsuitable examinees. Examiners should not test examinees who present as clearly unsuitable for polygraph testing at the time of the examination.
- 5) Psychosis. Persons who are acutely psychotic, suicidal, or have unstable or severe mental health conditions, including dementia, should not be tested.
- 6) Age. Persons whose chronological age is 12 years or greater should be considered suitable for polygraph testing unless they are substantially impaired. Polygraph testing should not be attempted with persons whose Mean Age Equivalency (MAE) or Standard Age Score (SAS) is below 12 years as determined by standardized psychometric testing (e.g., IQ testing, and adaptive functioning).

- 7) Level of functioning. Persons whose level of functioning is deemed profoundly impaired and warranting continuous supervision or assistance may not be suitable for polygraph testing.
- 8) Acute injury or illness. Persons suffering from an acute serious injury or illness involving acute pain or distress should not be tested.
- 9) Controlled substances. Persons who's functioning is observably impaired due to the influence of non-prescribed or controlled substances should not be tested.
- 10) Team approach. Examiners should consult with other professional members of the multidisciplinary supervision and treatment team, prior to the examination, when there is doubt about an examinee's suitability for polygraph testing.
- 11) Incremental validity. When there are concerns about an examinee's marginal suitability for testing, examiners should proceed with testing only when the multidisciplinary supervision and treatment team determines that testing would add incremental validity to risk assessment, risk management, and treatment planning decisions through the disclosure, detection, or deterrence of problem behaviors.

Appendix L-3: Plethysmograph Examination and Viewing Time

Taken from the ATSA Ethical Standards and Principles for the Management of Sexual Abusers, the Association for the Treatment of Sexual Abusers 2014 (PP. 70-75).

Phallometry

Phallometry is a specialized form of assessment used in treatment with individuals who have committed sexual offenses. Responsible use of phallometry results requires at least a rudimentary understanding of how phallometry works, and its advantages and limitations. As with any instrument or procedure, members are familiar with current literature and obtain appropriate training before using or interpreting phallometric testing results. Examiners receive training in phallometric testing in order to become knowledgeable about the technical aspects of the equipment and the appropriate protocols for conducting phallometric testing specific to the equipment being used. Examiners are also familiar with the research evidence on the reliability and validity of phallometric testing.

Phallometric testing using penile plethysmography involves measuring changes in penile circumference or volume in response to sexual and non-sexual stimuli. Circumferential measures (measuring changes in penile circumference) are much more common than volumetric measures (measuring changes in penile volume), which are used in only a few laboratories worldwide. However, there is good agreement between circumferential and volumetric measures once a minimal circumference response threshold is reached. Therefore, circumferential measures are the focus of this appendix.

Phallometric testing provides objective information about male sexual arousal and is therefore useful for identifying atypical sexual interests, increasing client disclosure, and measuring changes in sexual arousal patterns over the course of treatment.

Phallometric test results are not used as the sole criterion for determining atypical sexual interests, estimating risk for engaging in sexually abusive behavior, recommending that clients be released to the community, or deciding that clients have completed treatment programs. Phallometric test results are interpreted in conjunction with other relevant information (such as, the individual's offending behavior, use of fantasy, and pattern of masturbation) to determine risk and treatment needs. Phallometric test results are not to be used to draw conclusions about whether an individual has or has not committed a specific sexual crime. As well, there are limited data available regarding the use of the plethysmograph with clients who have developmental disabilities and clients with an acute major mental illness. Therefore, members need to exercise caution in using phallometry with these populations and in interpreting and reporting phallometric results.

Prior to testing, examiners screen clients for potentially confounding factors such as medical conditions, prescription and illegal drug use, recent sexual activity, and sexual dysfunction. Clients

with active, communicable diseases, particularly sexually transmittable diseases, are not to be tested until their symptoms are in remission.

Specific informed consent for the testing procedure and release forms for reporting test results are obtained at the beginning of the initial appointment. Laboratories have a standard protocol for fitting gauges, presenting stimuli, recording data, and scoring.

Examiners use the appropriate stimulus set to assess sexual interests that are the subject of clinical concern. For example, examiners use a stimulus set with depictions of children and adults to test clients who have child victims or who are suspected of having a sexual interest in children. At a minimum, examiners have at least two examples of each stimulus category. Stimuli that are more explicit appear to produce better discrimination between individuals who sexually abuse and control subjects than less explicit stimuli. It is important to ensure that the stimuli are good quality and avoid any distracting elements.

Members are aware of the applicable legislation in their jurisdiction regarding the possession of sexually explicit materials. If permitted to use visual stimuli for testing of sexual interest in children, examiners use a set of pictures depicting males and females at different stages of physical development, ranging from very young, pre-pubertal children to physically mature adults. The use of neutral stimuli, such as pictures of landscapes without people present, may increase the validity of the assessment. The inclusion of neutral stimuli serves as a validity check because responses to sexual stimuli that are lower than responses to neutral stimuli might indicate faking attempts. Faking tactics include looking away from or not listening to stimuli. Audiotaped stimuli may also be used to assess sexual interest in children; if used, these stimuli clearly specify the age and sex of the depicted individuals.

For testing of sexual arousal to non-consenting sex and violence, examiners using audiotapes include stimuli describing consenting sex, rape, and sadistic violence. Stimuli depicting neutral, non-sexual interactions are also included. Stimuli can depict males or females, children, or adults.

The phallometric testing report includes a description of the method used for collecting data, the types of stimuli used, an account of the client's cooperation and behavior during testing, and a summary and description of the client's profile of responses. Client efforts to fake or other potential problems for the validity of the data or the interpretation of results are also reported.

The three most common means of scoring plethysmograph data are standardized scores, percentage of full erection, and millimeter of circumference change. Those using phallometric assessment are aware of the advantages and disadvantages of each scoring method. Research has found that standardized scores (e.g., z scores) increase discrimination between groups. Transforming raw scores to standardized scores for subjects who show little discrimination between stimuli can, however, magnify the size of small differences between stimuli. Raw scores, millimeter of circumference change, or scores converted to percentage of full erection may be clinically useful in the interpretation of results.

Deviance indices can be calculated by subtracting the mean peak response to non-deviant stimuli from the mean peak response to deviant stimuli. For example, a pedophilic index could be calculated by subtracting the mean peak response to stimuli depicting adults from the mean peak response to stimuli depicting prepubescent children. Thus, greater scores indicate greater sexual arousal to child stimuli.

Because the sensitivity of phallometric testing is lower than its specificity, the presence of atypical/deviant sexual arousal is more informative than its absence. Results indicating no atypical/deviant sexual arousal may be a correct assessment or may indicate that a client's atypical/deviant sexual interests were not detected during testing.

Research indicates that initial phallometric assessment results are linked with recidivism. Repeated assessments can be helpful to monitor treatment progress and to provide information for risk management purposes.

Viewing Time Measures

Viewing time measures are a specialized form of assessment used with individuals who have engaged in sexually abusive behaviors. Using the results of viewing time measures responsibly requires members to have at least a rudimentary understanding of how viewing time measures work, as well as their advantages and limitations. As with any instrument or procedure, members should be familiar with current literature and obtain appropriate training before using or interpreting viewing time testing results.

Currently, unobtrusively measured viewing time is primarily used to identify sexual interest in children. For instance, to test sexual interest in children, examiners have a set of pictures depicting males and females at different stages of development, ranging from very young children to physically mature adults. The relative amount of time clients spend looking at pictures of children (who are clothed, semi-clothed or nude, depending on the jurisdiction,) is compared to the time that the same adult spends looking at pictures of adults. Research suggests that, as a group, individuals who have engaged in sexually abusive behaviors against children look relatively longer at stimuli depicting children than adults. Unobtrusively measured viewing time correlates significantly with self-reported sexual interests and congruent patterns of phallometric responding among non-sexually abusive subjects. Little is known, however, about the value of retesting using viewing time as a measure of treatment progress.

As with any test, specific informed consent for the test procedure and release forms for reporting results are obtained prior to beginning testing. Examiners have a standardized protocol for presenting the stimuli, recording, and scoring. Examiners are familiar with the reliability and validity of the test. In particular, it is important that examiners know the degree to which the viewing time measure being used has been validated for the client population being assessed. Note that there is limited information specific to the use of viewing time with clients who have developmental disabilities. Currently this technology has primarily been used to identify sexual interest in gender and age. As well, there is limited information specific to the use of viewing time with clients with developmental disabilities.

The test report includes a description of the method used for collecting data, the types of stimuli used, an account of the client's cooperation and behavior during testing, and a summary and description of the client's responses. Client efforts to fake or other potential problems for the validity of the data or the interpretation of results are also included.

As noted in the main body of this document, viewing time is not to be used as the sole criterion for determining deviant sexual interests, estimating a client's risk for engaging in sexually abusive behavior, recommending whether a client be released to the community, or deciding whether a client has completed a treatment program. Viewing time test results are interpreted in conjunction with other relevant information (for example, the individual's offending behavior, use of fantasy, and

pattern of masturbation) and are never to be used to make inferences about whether an individual has or has not committed a specific sexual crime.

Appendix M: Female Sex Offender Risk Assessment

Female Sex Offender Risk Assessment White Paper October 2013

Currently the field of sex offender management and treatment is lacking any validated/standardized risk assessment instrument for the female sex offender population. As a result, providers and other stakeholders working with this unique offender type do not have an approved method of accurately assessing risk. Further, it is counterproductive and prohibited for risk assessment instruments normed on the male population to be used on the female population. Given that research has shown that clinical judgment is the *least* accurate indicator of risk and that standardized risk instruments are the preferred measure of risk, this a substantial and concerning gap in the field.

Female sex offenders represent less than 10% of all known sex offenders.²¹⁶ With such a small offender population there are challenges in gathering data resulting in a lack of research.²¹⁷ In fact, the field of sex offender management is 20 years behind regarding female sex offenders in comparison to male offenders.²¹⁸ Given that recidivism amongst this group appears to be very low, (meta analyses from 2005 to 2010 indicate female sexual recidivism is between 1-3%) effectively discerning accurate risk factors is extremely challenging and has proven to be a barrier to developing a standardized risk assessment thus far.²¹⁹ The Sex Offender Management Board (SOMB) is working toward developing a risk assessment, but this task has proven arduous and will realistically take a long time due to the necessary numbers needed for data collection as well as collaboration with other states and possibly nations this project requires.

In the interim, the SOMB offers the following guidance to professionals working with this population. As new research emerges the SOMB will respond accordingly by incorporating updated information but until such time it is essential to utilize best practices. After a thorough review of current information from professional publications (books and peer reviewed journals by experts in the field) there appear

²¹⁶ Cortoni, F., & Hanson, R.K. (2005). A review of the recidivism rates of adult female sexual offenders (Research Report 2005 No R-169). to be some indicators that can be helpful when appraising risk of female sex offenders.²²⁰ The following list is not intended to be all encompassing or to be used as a risk assessment, rather, professionals should consider the following factors in conjunction with sound clinical judgment as they may potentially be related to risk for female sex offenders:

- A. Prior criminal history - i.e. anti-social orientation
- B. Prior child abuse offenses - criminal history, social services, self-report
- C. Denial or minimization of offending behavior
- D. Distorted cognitions about sexual offending/abuse - Multi Phasic Sexual Inventory II and/or Abel
- E. Intimacy deficits and problematic relationship(s) - Intimacy deficits can be defined as restrained capacity of an individual to exchange thoughts and feelings that are of personal significance with another individual who is highly valued. Problematic relationships can be relationships in which the individuals do not emotionally support one another, foster communication, or appropriately challenge one another. In addition, the individual may place a higher value on the relationship than his/her own personal worth. The relationship may contain unhealthy interaction, and does not effectively enhance the lives of the people involved. The individuals may not take responsibility for making their own lives or the relationship work.
- F. Use of sex to regulate emotional state or fulfill need for intimacy. This can be viewed as an individual who engages in sexual behaviors as a coping mechanism to improve mood, increase self-esteem, reduce stress, achieve emotional well-being, solve problems and/or to avoid negative emotional states. Using sex to fulfill a need for intimacy may be seen as an individual who engages in sexual behaviors to meet emotional needs, to achieve a superficial/distorted sense of connection, and/ or to achieve emotional fulfillment through physical sexual acts.
- G. Sexual gratification and instrumental goals such as revenge or humiliation
- H. Substance abuse
- I. Puts needs of co-offending partner above self and/or child(ren) and/or victim
- J. Evidence of illegal, abusive and harmful sexual interest - Viewing Time
- K. Impulsivity - This can be viewed as engaging in behavior without adequate thought, the tendency to act with less forethought than do most individuals of equal ability and knowledge, or a predisposition toward rapid, unplanned reactions to internal or external stimuli without regard to the negative consequences of these reactions.

²²⁰ Clark, D., & Howden-Windall, J. (2000). A retrospective study of criminogenic factors in the female prison population. London: Her Majesty's Prison Service; Denov, M. S., & Cortoni, F. (2006). Adult female sexual offenders. In C. Hilarski & J. Wodarski (Eds.) *Comprehensive mental health practices with sex offenders and their families* (pp. 71-99). New York: Hawthorne Press; Cortoni, F., Anderson, D., & Bright, D. (2002). Locus of control, coping and sexual offenders. In B. A. Schwartz & C. Cellini (Eds.), *The sex offender* (Vol. 4). Kingston, NJ: Civic Research Institute; Gannon, T. A., & Cortoni, F. (2010). *Female sexual offenders: Theory, assessment, and treatment*. Hoboken, NJ: John Wiley & Sons; Gannon, T. A., Rose, M. R., & Ward, T. (2008). A descriptive model of the offense process for female sexual offenders. *Sexual Abuse: A Journal of Research and Treatment*, 20(3), 352-374.

- L. Documented presence of personality disorder (e.g. Borderline, which may impact emotional regulation, impulsivity and poor decision making).

It may benefit the clinician to focus on offender characteristics in conjunction with clinical judgment,²²¹ and to use the Level of Service Inventory Revised (LSI-R) to identify criminogenic risk and needs. Given that effective risk assessment is essential in evaluating, treating, and managing sex offenders, it may be tempting to utilize the plethora of standardized assessments available for male offenders. However, they are prohibited for use with female offenders.²²² This is because the assessments were validated on the male population and are empirically based on the specific relationship between risk factors and recidivism, which is null and void with females. In addition, these assessments may misrepresent risk in female offenders.

The Board would like to remind stakeholders that offenses involving female sex offenders have a lower reporting rate than those involving a male offender. In addition, there are female offenders who are dangerous and require a high level of treatment and supervision. While they are a unique population, the behavior is similar and should be treated equally (e.g. non-compliance, instability, resistance, risk characteristics). Often females in the criminal justice system are treated differently due to individual, professional, cultural and social biases. However, inequity and inconsistency in sentencing, supervision, treatment, etc. based solely on gender differences does an injustice to the offender and the system and places the community at risk. The SOMB continues to promote individualized assessment and intervention efforts for all offenders regardless of gender and encourages the use of risk, need, responsivity principles. Furthermore, the SOMB endorses gender responsive interventions and evaluation. The very nature of sexual offenses requires that public and victim safety remain at the forefront of decision-making.

Appendix N: Computer Use Agreement for Sex Offenders

.....
Computer Use Agreement for Sex Offenders

Client: _____ Supervising Officer/Designee: _____

By signing below, the above-named client indicates (s)he understands (s)he has the right to refuse consent to the items contained herein and that the client voluntarily agrees to be compliant with the following conditions:

_____ Client shall provide a complete and accurate inventory of all computers, computer-related equipment, and communications devices and services on an inventory form provided by the Probation Department. The client agrees to ensure that all information on the inventory is complete, accurate and current at all times and that they will not use or access any electronic storage or communication device or service not reported on the inventory form and specifically approved for use by the Probation Department.

_____ Client shall obtain prior approval from the Supervising Officer/Designee to engage in the following activities:

- _____ Web browsing (including but not limited to surfing).
- _____ Email (all email accounts must have prior approval).
- _____ Interpersonal communication (including but not limited to chatting, texting and instant messaging).
- _____ Producing web content (including but not limited to a web site, MySpace and other social networking site pages, YouTube, Podcasting, blogging, vlogging).
- _____ Participating in social networking activities.
- _____ Internet related telephone communication (including but not limited to using Voice Over Internet Protocol).
- _____ File sharing by any method (including, but not limited to Peer to Peer, Internet Relay Chat, attachments to emails, iTunes).

_____ Client shall not use the computer for any purpose which might further sexual activity. Such use includes, but is not limited to, possession or viewing of material that is sexual in nature.

_____ Client shall be prohibited from possessing or viewing certain materials related to, or part of, the grooming cycle for his/her crime. Such materials include, but are not limited to, the following:

- _____ Images of your victim.
- _____ Stories or images related to your crime or similar crimes.
- _____ Images which depict individuals similar to your victims (e.g. children).
- _____ Stories written about or for individuals similar to your victim.
- _____ Materials focused on the culture of your victim (e.g. children's shows or web sites).

_____ Client shall be prohibited from using any form of encryption, cryptography, steganography, compression, password protected files and/or other method that might limit access to, or change the appearance of, data and/or images without prior written approval from the Supervising Officer/Designee. If, for work purposes, password protection is required on any system or files used by Client, the password shall be provided to the Supervising Officer/Designee upon request.

_____ Client shall be prohibited from avoiding the creation of, or altering or destroying records of computer use without Supervising Officer/Designee's approval. This includes, but is not limited to, deleting or removing browser history data regardless of its age, emptying the Recycler, the possession of software or items designed to boot into or utilize RAM kernels, alter or wipe computer media, defeat forensic software, or block monitoring software. This also includes a prohibition against restoring a computer to a previous state or the reinstallation of operating systems.

_____ Client consents to unannounced examination by Supervising Officer/Designee of any and all computer(s) and/or devices(s) to which Client has access for the limited purpose of detecting content prohibited by this document, conditions of probation, or court order. This consent to examine includes access to all data and/or images stored on any storage media (including but not limited to cell phones, iPods, PDA's, removable media, thumb drives, camera cards, game consoles, CDs, DVDs) whether installed within a device or removable and separate from the actual device.

_____ Client shall allow the installation of monitoring software and periodic examination of their computer at their own expense to insure compliance with the conditions of probation and this agreement. The client has no expectations of privacy regarding computer use or information stored on the computer if monitoring software is installed and understands and agrees that information gathered by said monitoring software may be used against him/her in any subsequent administrative or legal proceeding.

_____ That the conditions of usage may be modified by the Probation Department or their designee as needed and agrees to abide by all modifications of usage. The client has the right to refuse to abide by modifications of these conditions, but understands that their access to computers and communications devices may be revoked if they fail to comply with all conditions imposed by the Probation Department or their designee.

_____ Client specifically agrees to be responsible for all data, images and material on the computer and voluntarily consents to announced or unannounced searches by the Supervising Officer/Designee to verify compliance with these special conditions of supervision. The Client understands and agrees that his/her computer, related equipment, communication, and storage devices are subject to seizure by Supervising Officer/Designee if, during a search, any evidence of a violation or any evidence of a new crime is detected.

_____ Client's Signature

_____ Date

_____ Supervising Officer's Signature

Appendix O: Digital Technology Use Factors

Digital Technology Use Factors Which Indicate Increased Sex Offender Investment In Digital Sexual Content

Jim Tanner, Ph.D.
KBSolutions Inc.
www.kbsolutions.com
lists@kbsolutions.com

I have been conducting forensic examinations of convicted sex offenders' digital devices since 1998. I worked as a cybercrime analyst for and with various state level probation departments during this period. My work environment was unique in that the offenders were convicted and on probation. I worked live on the offender's devices, in the offender's home or office environment and with the offender present. During my examinations I talked with the offender, discussed his/her cyber behavior and asked questions about what I was finding. This afforded me a fuller understanding of their cyber-sexual behavior than I would have obtained working on the device in a forensic lab or simply talking to an offender in absence of the device itself.

Based on more than 1,300 examinations of offenders' digital devices, I found 14 factors which indicate an offender has an investment in digital sexual content that is beyond the norm for convicted sex offenders. This investment often leads to resistance to containment/treatment and a higher probability of recidivism. While some of these factors may be benign for the public at large, they become important when found in the technology use of individuals charged with or convicted of sex crimes. It is when one's behavior draws the attention of law enforcement that the factors below become significant.

When considering the digital behavior of sex offenders, one should seek to understand the big picture of the offender's technology use and how it relates to sexual behavior (also see www.kbsolutions.com/beyond.pdf and www.kbsolutions.com/PornContraband.pdf). As offenders engage in more of the factors, their investment in cyber-sexual content increases. It has been my experience that increased investment in cyber-sexual content also leads to an increase in resistance to containment and treatment.

The elements described in the remainder of this paper are listed in no particular order. The reader should not assume any priority based on location within the list.

The 14 Factors:

1. Surfing more than 10 hours a week of sexual content.
2. High ratio of sexual sites to general surfing, regardless of number of hours.
3. Saved versus cached material. As the ratio of saved to cached goes up, so does the risk.
4. Any cataloging of sexual content.
5. Low ratio of "Splash Page" to "Inside Site" images.
6. Membership in adult sites or organizations promoting sexual behavior.
7. Nude pictures of the offender on the offender's devices.
8. Pictures with sexual content taken by, created by, or altered by the offender.
9. Erotic literature written by the offender.
10. Trophy materials stored on the offender's devices.
11. User group or Peer to Peer activity seeking sexually explicit materials.
12. "Red Flag" Themes, if they have a significant number of images/files:
13. Internet grooming or solicitation of minors using any medium.
14. Use of technology for sexual content which indicates a more heavily invested approach:

Each of these factors are explained in the pages that follow. I believe a complete psycho-sexual evaluation cannot be obtained without both a polygraph and a digital technology examination. It is my intention that this paper serve as a checklist to evaluators, containment/treatment teams, and forensic examiners when considering the digital behavior of sex offenders.

As technology advances, changes will undoubtedly occur in the number and types of indicators related to cyber-sexual investment. I will endeavor to keep this paper updated as technology changes. This paper, in its most recent form will always be available at www.kbsolutions.com/KBS14Factors.pdf.

Factor 1: Surfing more than 10 hours a week of sexual content.

Addiction to cyber-sex is a concern for those charged with or convicted of sex crimes. There is no hard and fast rule as to what constitutes a threshold of addiction. Each individual's pattern of sexual content use must be compared to their pattern of general (non-sexual) technology use.

During my examinations I found that offenders who used digital sexual content more than 10 hours a week also reported higher incidence of intrusive sexual thoughts, illegal, abusive or harmful sexual ideation, and feeling like they were 'addicted' to technology use. Using technology more than 10 hours to obtain sexual content indicates enhanced investment in digital sexual content.

Factor 2: High ratio of sexual sites to general surfing, regardless of number of hours.

Regardless of the total number of hours spent on the Internet (or using technology), the ratio of sexual content to non-sexual content is an important indicator of investment in digital sex. Calculating the percentage of digital sexual activity to non-sexual digital activity gives the treatment team valuable information concerning investment. An offender who views sexual content 80 hours of 100 hours of technology use is different than the offender who views sexual content 10 hours of 100 hours technology use. Similarly, an offender who views sexual content 8 of 10 hours of technology use is different than the offender who views sexual content 1 of 10 hours of technology use.

The higher the percentage (ratio) of sexual content to general technology use, the higher the investment in digital sexual content.

Factor 3: Saved versus cached material.

Cached: When browsing the Internet, all browsers automatically write the contents of the sites visited to the local hard drive in a special folder called a "cache". This content is automatically stored by the browser and is not a 'purposeful download' of the material. Its presence on the storage media simply indicates the offender visited the site and/or viewed the material. Cached material should be considered differently than material that is saved by the offender.

Saved: When using a browser, the User can right-click on the content and save it to the local hard drive. This "Save As" function is built into all major operating systems. The User can place the content (picture, video, etc.) anywhere on the storage media, can name the folder it is placed in, and can change the name of the content being stored. This "Save As" function requires human interaction; it is not automatic. Thus, when something has been 'saved' it indicates the content is of special significance to the offender.

The percent of saved material (offender took action) to cached material (offender simply viewed the material), is an indication of the investment the offender has to digital sexual content. The higher the proportion of saved material, the greater the investment.

Additionally, evaluators and treatment team members should pay attention to the themes contained in the saved material. Saved material indicates special interest on the part of the offender.

Factor 4: Cataloging of sexual content.

Related to saving material is cataloging material. As indicated above, when a User saves material, they can create and name folders, rename content, and save the material in any organizational structure that makes sense to the offender. When offenders begin to organize saved material into categories they have become 'collectors'. Often the names of the folders are elucidating for evaluators and treatment teams. For example, folders named 'blondes, 'girls 13', or 'outdoors' give us an insight to the offender's cognitive structure.

Further, keeping sexual content (saving it outside the cache) indicates an offender's unwillingness to part with the material. They don't want to lose it, they want to keep it and use it again in the future. Organizing and cataloging the saved material is a major step further into the investment in sexual content. The organization and cataloging of material is done primarily for ease of access and focus. It is faster and easier for an offender to find specific content if they have it organized and cataloged.

Cataloging behavior indicates a substantial increase to the investment in digital sexual content.

Factor 5: Low ratio of "Splash Page" to "Inside Site" images.

Splash Page: When visiting a website, the first page that displays is the 'home' or 'splash' page. This page is the portal that comes up when entering the top-level domain URL into a browser (e.g. www.youtube.com). The splash page on adult sites is an advertisement. Splash pages generally contain several smaller images designed to entreat the User into clicking deeper into the web site. The economics of web site management dictate that images on the splash page be limited in size. Smaller images load faster and take up less room on the screen. The goal of the site's splash page is to get the User to 'drill down' by clicking on items to go deeper into the site. Due to size limitations, splash page images are generally of lower quality and splash videos short in length.

Inside Site: Material located on pages other than the splash page are accessible only by User action.

Once a User clicks through or drills down into a site, the images are larger (full sized), higher quality, and the videos generally longer. Drilling down into a site indicates the offender has more interest in the material.

The extent to which an offender skims across splash pages versus drills down into site content is an indicator of investment in digital content. This is related to the Pace element of the TRAPS model of assessing sex offender's computer use (www.kbsolutions.com/beyond.pdf).

A thorough examination of URL histories indicates whether content was contained on a splash page or was deeper inside the site. However, a quick rule of thumb is to consider the size of the image on the media. Images

smaller than 10kb are generally splash page content. Images between 10kb and 20kb could be either splash page or inside site material. Images larger than 20kb are generally found inside the site (the offender drilled down into the site to view it). The average splash page can have between 5 and 20 images. Pages located deeper in the site have fewer images (often only 1 image per page). Thus, even a 80:20 ratio of splash to inside can indicate significant drilling down behavior on the part of the offender.

Offenders found to have frequently drilled down into many sites (e.g. have a low ratio of splash page to inside site materials) demonstrate a higher investment in digital sexual content. Evaluators and treatment teams should also pay particular attention to the themes of the content viewed from inside sites - it is of interest to the offender.

Factor 6: Membership in adult sites or organizations promoting sexual behavior.

Adult web sites make money by selling memberships. The average adult site will give away 10-20 images as loss leaders to encourage visitors to purchase membership in the site. This is analogous to your local grocery store putting green beans on sale for 10 cents a can to get you into the store. The logic of loss leaders is that once in the store, you will also purchase other items at full price.

Adult sites work on the same principle. By giving away 10-20 images or short video clips free, they are betting the visitor will become interested in seeing the remainder of the site's content and be willing to purchase a membership to have access to the thousands of images/videos.

There are many adult sites available on the web. Because of the sheer number of sites in existence, there are literally tens of thousands of images and videos available free on the web. One could view sexual content for months, if not years, and never have to pay for any content. Thus, when an offender decides to pay money to purchase membership in a site, it is an indication of an increased investment (literally and figuratively) in sexual content.

Concomitantly, when an offender joins groups which promote sexual behavior (e.g. adultfriendfinder.com, squirt, alt, etc.), they are signifying an increased investment in and identification with sexual content. The type and focus of member groups should be carefully examined by the treatment team.

I caution the reader that I am not talking about behavior between non-offender consenting adults. Membership in adult sites or sexually focused groups for non-offenders is not at issue here. It is when one's behavior draws the attention of law enforcement that membership in such sites and groups becomes significant.

Factor 7: Nude pictures of the offender on the offender's devices.

It is my experience that approximately 25% of the offenders whose devices I examined had pictures of themselves nude on their devices. When images of the offender are found on

their devices, it should raise the question "...what are they doing with the pictures?" Are they sharing them? With whom are they sharing?

Having nude pictures of themselves indicates an increased investment in defining themselves as a sexual object. The more graphic the images, the greater the investment in the offender seeing himself/herself primarily as a sexual object. This focus in self-definition is reflective of a resistance to containment and treatment.

It is important to note that I am not talking images commonly found among those participating in "sexting" behavior that is becoming more common among young people. I'm talking about images contained on the digital devices of individuals charged with or convicted of sex crimes, not adolescent 'felony stupid' behavior. Nor am I talking about behavior of or between non-offender consenting adults. It is when one's behavior draws the attention of law enforcement that the possession of self-erotic images becomes significant.

Factor 8: Pictures with sexual content taken by, created by, or altered by the offender.

Images or videos do not have to contain the offender to be significant. If the offender has used their digital equipment to create sexual images or videos of others it again raises the question of what they are doing with them. The offender is a producer of adult material rather than just a consumer. This indicates an increased investment in digital sexual content. The created material might include artwork (digital or scanned) that the offender created.

It is also important to note whether the offender has altered digital sexual content. Altering would include cropping, editing, retouching, and morphing content. Other than removing copyright notices, any alteration of an image indicates increased investment in the digital content.

Again, I caution the reader that I am not talking about behavior of or between non-offender consenting adults. It is when one's behavior draws the attention of law enforcement that the manipulation of digital content becomes significant.

Factor 9: Erotic literature written by the offender.

In the same vein as creating or altering images or videos, offenders who produce erotic literature are demonstrating an increased investment in sexual content. Adult ("erotic") stories abound on the Internet and in print. Some of the topics contained in erotic literature are illegal when found in images/videos (e.g. sex with children). For example, in June of 2010 there were 21,488 stories on literotica about incest and 9,787 stories about non-consensual sex (rape). Offenders who have shifted their focus in stimuli from images to text are often doing so to avoid prosecution. While the creation of such prose may be protected by the 1st Amendment, it should be of concern when the prose is created by sex offenders.

The act of creative writing takes more imagery and focus than is commonly found among amateurs who produce sexual images/videos. Therefore, it is of concern when we find evidence that a sex offender has been producing written erotica.

Again, I caution the reader that I am not talking about behavior of or between non-offender consenting adults. It is when one's behavior draws the attention of law enforcement that the creation of written erotic content becomes significant. The presence of the material indicates an increased investment in sexual content.

If offender-produced erotica is discovered, the content of the material should be of great interest to the treatment team.

Factor 10: Trophy materials stored on the offender's devices.

Offenders often make the news articles/stories are often available in digital formats. In about 10% of the digital devices I examined, I found offenders saving articles, clippings, and/or video news stories about themselves. These articles constitute "trophy materials" and indicate the offender has not fully grasped the magnitude of their behavior.

Additionally, when victims are family members it is not uncommon to find pictures of the victim on the offender's digital devices. Sometimes this possession is inadvertent or unintentional post-conviction, often it is purposive. Examining the last access dates of images helps the treatment team determine whether the image should be considered trophy material or not (if viewed and kept after being told to remove images of the victim, it clearly constitutes trophy material).

If the local jurisdiction has web accessible sex offender registries, I find that approximately 10% of offenders will visit the registry and search for themselves and others within their community. When questioned about this behavior, offenders often tell me that it makes them feel less abusive or harmful to know others have done what they did. Looking themselves up may be curiosity, but surveying the registry for others constitutes behavior that indicates more than curiosity, it is a form of trophy activity.

The presence of trophy materials on the digital devices of sex offenders indicates a greater investment in their behavior.

Factor 11: Usegroup or Peer to Peer activity seeking sexually explicit materials.

Usegroups: Decades ago bulletin boards (Usegroups) were the primary source of sexual content. There are many Usegroups still in existence that appear to specialize in sexual content. The last time I counted (2008) 3.7% of all Usegroups focused on sexual content. There were 1,600 Usegroups dedicated to sexual content in 2008. Usegroup materials are primarily advertisements for adult sites and amateurs posting images. Downloading from Usegroups is time consuming (even when automated) and generally requires unpacking the content. Moreover, when downloading from a Usegroup, one does not know what they are getting. Hence, it is risky behavior. Few sex offenders will download from Usegroups (less than 2% in my experience). When you find an offender who continues to use this approach to gaining content, it indicates a heavy investment in sexual content.

Peer to Peer (P2P): P2P has blossomed in the past decade. Currently most of the exploitation of children material is passed via P2P. Sex offenders who are active in P2P are generally interested in receiving or distributing child pornography. In my experience offenders who are not interested in child pornography are not involved in P2P activities to any great extent. Finding P2P activity, especially high levels of P2P activity, on an offender's digital devices indicates an increased investment in sexual content, and more specifically an increased investment in illegal sexual content.

Factor 12: "Red Flag" Themes, if they have a significant number of images/files

As indicated in the TRAPS model (www.kbsolutions.com/beyond.pdf), digital devices yield information about an offender's themes of interest. Categories of images are not themes until there is a consistent pattern found within the digital device. As a general rule of thumb, I do not consider something a theme unless I find more than 30-50 indications of interest (i.e. 30-50 pictures or videos, 15-20 searches for the same or similar topics, etc.). These themes are often unrelated to the behavior resulting in the precipitating offense. Knowing the offender's themes of interest substantially advances the job of containment and treatment.

More importantly when certain "Red Flag" themes are discovered, it signifies increased investment in illegal sexual behavior. The most common Red Flag themes I have found are (in order):

- A. Bestiality
- B. Exhibitionism
- C. Voyeurism
- D. Non-Consensual
- E. Minors/Children

A particularly important theme, Snuff materials (victim is killed), is rare but always significant.

Presence of any Red Flag theme indicates increased investment in sexual content.

Factor 13: Internet grooming or solicitation of minors using any medium.

At the federal level a high proportion of cases involve child pornography or Internet grooming/solicitation of minors. These crimes are heinous. Fortunately, (or unfortunately, I'm not sure which), at the state and local level this is not the case. Only a small percentage of state level sex offenders are involved with child pornography or Internet solicitation/grooming of minors. Most state level offenders generate victims from a position

of trust. Family, relatives, students, members of congregations, etc. are the common victim pool.

Most sex offenses are prosecuted at the state and local level. The sheer number of victims generated by state level sexual offenses is staggering. As a result, most offenders nationwide generate victims through a position of trust. My comments should not be construed to minimize the horrendous carnage visited upon children by federal level offenders. Nor are they intended to diminish the efforts or value of national efforts to catch Internet offenders. My intent is to point out that the vast number of victims are not groomed via digital technology.

Soliciting through digital devices is, then, "outlier" behavior. It violates the standard MO of sex offenders. Sex offenders groom the victim's environment as well as the victim. Internet solicitation and grooming violates this normal approach. It is impossible to groom the victim's environment over the Internet. Moreover, it is not possible to ensure who, exactly, your victim is. Offenders who solicit and groom over the Internet often recognize that it may be a cop they are grooming (has anyone not seen at least one episode of To Catch A Predator?). There are two kinds of individuals who will solicit or groom over the internet:

- A. The offender who is so stupid they don't know it could be a cop on the other end. This stupidity makes them dangerous. They could (and probably would) try anything.
- B. The offender who understands it may be a cop on the other end, but whose drive to get a victim outweighs their instinct for self-survival. These offenders generally ask "... are you a cop?" This overriding drive to get a victim makes them dangerous.

Offenders who solicit or groom through digital devices are high risk and should be treated as such.

When an offender's digital devices indicate they were used to initiate contact with, solicit, and/or groom minors, it is an indication that the offender has a significant investment in digital sexual content. If the presenting charge does not involve solicitation or grooming via digital devices, the presence of it on their devices should immediately raise the level of containment for any offender.

Factor 14: Use of technology for sexual content which indicates a more heavily invested approach

There are a few technologies which are not generally associated with sexual content. If an offender is found to have used these technologies to further sexual interests, it indicates an increased investment in digital sexual content and a concomitant increase in resistance to containment and treatment. These technologies are:

- A. IRC/IM (Chat/Instant Messaging).
- B. SMS/MMS (Texting - risk is determined by level of use and age of correspondents)

Appendix P: Background Investigations for Approved Supervisors

Background Investigations for Approved Supervisors
Adult Standards - Sex Offender Management Board
February 2015

Approved Supervisor: a person who can supervise an adult offender's contact with a specified minor child or children. This person is an individual who has met the criteria described in the Standards, has been approved by the CST (Community Supervision Team) and has signed the contract.

In 2011 the Sex Offender Management Board (SOMB) revised Adult Standards and Guidelines, including sections discussing Approved Supervisor status, duties and responsibilities. Since that time, the SOMB has been made aware of several implementation challenges related to citizens attempting to obtain criminal history records for the purposes of becoming an approved supervisor. The SOMB has made several policy revisions to attempt to address this issue and improve the policy; however, these efforts have not significantly improved the ability of citizens to obtain criminal history records in a timely manner. The current policy approved by the SOMB is for potential approved supervisors to obtain their own criminal history information online through the FBI (Federal Bureau of Investigation), and then subsequently every three years online through CBI (Colorado Bureau of Investigation), at the discretion of the community supervision team (CST). However, the FBI process for a criminal history has demonstrated to take a long time (up to 6 months) to produce results. This is causing significant delays for offenders in obtaining appropriate approved supervisors. The SOMB continues to believe that a national criminal history check is appropriate, given that CBI checks do not include non-Colorado criminal history, even if it is time-consuming and costlier than the CBI criminal history check, but also recognizes the importance of expediency in approving supervisors.

Given the above concerns, the SOMB is again modifying its policy related to criminal history checks for approved supervisors to allow for a more expedited approval process. Citizens interested in being approved supervisors may be tentatively approved by the CST based upon a favorable CBI online criminal history check alone or verification of an approved support person through the Department of Corrections, provided that he/she also submits to an FBI online criminal history check. If subsequent results from the FBI indicate a problem, the approved supervisor status could then be removed pursuant to the requirements in the Standards and according to the discretion of the CST. This solution would allow offenders to have approved supervisors much sooner, but would add a cost (approximately \$8.00). It is still acceptable for those citizens not wishing to pay the extra money to submit only the FBI online criminal history check and wait for the results as is stated in the current policy.

The hope is that this change in the current policy will maintain community and victim safety, while still supporting the needs of the offender for positive support via an approved supervisor.

Introduction

The SOMB Sexual Behavior Disclosure Packet is designed to provide a structure for the treatment provider to assist the client in disclosing, organizing, and documenting relevant (i.e., specific to risk and treatment needs) information about the client's sexual behavior. An accurate and thoughtful approach to sexual behavior disclosure benefits the treatment process by focusing treatment on dynamic/criminogenic needs related to sex offense recidivism and aids in the identification of the client's risk areas. The completion of the Sexual Behavior Disclosure Packet is a collaborative process between the therapist and client. The Sexual Behavior Disclosure Packet is a working document in which the therapist should continue to work with the client in the understanding that additional information and/or disclosures may occur throughout the process. The therapist will have open and continuous communication with the polygraph examiner in areas that should be addressed. It is the responsibility of the polygraph examiner to formulate questions in consultation with the CST. It is incumbent upon the client to consistently bring written material into the treatment setting for discussion. Likewise, the therapist is responsible for collaborating with the client and for thoroughly discussing the client's work within a therapeutic setting using the treatment modality the therapist deems most appropriate for the individual client.

This SOMB Sexual Behavior Disclosure Packet is divided into two categories:

1. Sexual History Development: The goal of this section is to assist clients in exploring how they learned about sexuality and how that impacted their sexual development and eventual sexually abusive/assaultive behaviors.
2. Sexual Offense History: This portion of the packet is designed to assist clients in taking inventory of their sexually abusive/assaultive behaviors. It is an opportunity to learn about these behaviors so that the client can live a life offense-free.

Each category is followed by sections to assist in safety planning and treatment plan formulation. They are as follows:

1. Risks and Needs: This section is for the therapist to complete during treatment sessions with the client. It should not be handed to the client to complete. This section addresses risk domains covering sexual interests and attitudes. This section is used in conjunction with Part 1 in order to identify protective factors, risks and needs.
2. Responsivity: This section is for the therapist and client to use collaboratively to continue the process of identifying how to use identified protective factors and client strengths to prevent re-offense. This is also an opportunity to work on safety planning, trigger management and treatment planning.

Definitions

This section includes terms that are repeatedly used throughout this packet. Additionally, as terms are introduced they will be further explained and defined. It is the therapist's responsibility to discuss these definitions with each client as they begin working on this packet.

- Minor Child:** Any person under the age of 18.
- Protective Factors:** Personal strengths and positive building blocks you have or can establish in your life. Research shows protective factors can reduce your risk of recidivism.
- Relative/Family Member:** Include all persons related by blood, marriage (excluding spouse or someone in a spousal role) or adoption (e.g., mother, father, sister, brother, aunt, uncle, grandparents, grandchildren, cousins, nieces, nephews, step-children, in-laws).
- Safety Plan:** A written document derived from the process of planning for community safety. The document identifies potential high-risk situations and addresses ways in which situations will be handled without the offender putting others at risk. The plan requires the approval of the therapist and supervising officer(s).
- Physical Sexual Contact:** Refers to rubbing or touching another person's sexual organs (i.e., breasts, buttocks, genitalia) whether over or under clothing, if for the purpose of sexual arousal, sexual gratification, sexual stimulation or sexual "curiosity." This includes having, allowing, or causing another person to rub or touch one's own sexual organs, whether over or under clothing, for purposes of sexual arousal, sexual gratification, sexual "curiosity," or sexual stimulation. This may not include parental contact with children's private areas in the form of diapering, wiping, bathing, dressing, or changing, unless done for the purpose of sexual arousal or stimulation.

Discussion Point: The therapist is responsible for thoroughly discussing this definition and its application to the sexual behavior disclosure process with each client. Arousal is a significant factor of this component. The type of contact described above may have occurred with no sexual arousal and it is therefore likely that such contact would not be considered sexual contact.

Sexually Abusive/Assaultive

- Behaviors:** Forced or manipulated unwanted sexual contact that occurs without consent. This also includes non-contact sexual behaviors such as exhibitionism, voyeurism, public masturbation, child pornography, or other non-contact sexual behaviors.²²³

²²³ Adapted from PSCOT Policy Manual - will complete reference if maintained

- Stranger Victim:** A victim is considered a stranger if the victim did not know the offender 24 hours before the offense. Victims contacted over the Internet are not normally considered strangers unless a meeting was planned for a time less than 24 hours after initial communication.²²⁴
- Victim:** Any person against whom sexually abusive behavior has been perpetrated or attempted.

²²⁴ McGrath, R. J., Lasher, M. P., & Cumming, G. F. (2012). The sex offender treatment intervention and progress scale (SOTIPS): Psychometric properties and incremental predictive validity with static-99 R. *Sexual Abuse: A Journal of Research and Treatment, 24*(5), 431-458.

Part 1: Sexual Development

.....

Introduction

To the Client: This portion of the packet is designed to assist you in exploring how you learned about sexuality, and how that impacted your sexual development and eventual sexually abusive/assaultive behaviors. This part of the packet is designed to be completed on your own time. Once you have completed a section, you will need to bring it back to your treatment provider to discuss within the therapeutic setting. You and your treatment provider can establish expectations for how frequently this should occur.

This will be difficult work. It may bring up difficult memories, and trigger memories and difficult emotions related to your own victimization. It is important, for your own well-being, that you speak about these feelings and memories with your therapist. Although difficult work, it is necessary and helpful as you work to create a lifestyle free of sexually abusive/assaultive behaviors. As you work through sections, you may not be able to recall specific dates or ages. In these situations, it is okay to estimate to the best of your ability. If you are unclear about the expectations or definitions in this packet, ask your therapist for assistance.

To the Therapist: This portion of the packet will assist you in learning about your client’s sexual development. It will also assist in identifying those protective factors that will be important in strengthening the client’s skills to remain a safe member of the community. This is a collaborative process with the expectation that written work will be thoroughly discussed with the client in whatever treatment modality you find most appropriate. If you determine the client’s needs dictate that the information be gathered via a different method (e.g., a client unable to write may need a scribe) that is fine. It is important that the client’s words be captured and then processed within the therapeutic alliance you have established with that client.

Sex Education

Sexuality is an integral part of who we are, what we believe, what we feel, and how we respond to others. Please respond to the following statements. When you cannot recall specific information (i.e., age, date, etc.) it is acceptable to provide estimates or ranges. If you have questions, talk to your therapist prior to starting work on this section.

3. Describe when you learned about sexuality. This may have occurred at different times and from different sources. Please be as thorough in your answer as possible.
4. Describe where you learned about sexuality.
5. Describe from whom you learned about sexuality.

Childhood Sexual Experiences

In this section, please describe your childhood sexual experiences. This may include exploration and curiosity driven behaviors as well as experiences in which you felt you had no ability to stop. The point of this section is not to identify behaviors and experiences as abusive or non-abusive, but to simply identify those experiences and be prepared to discuss them with your therapist. In your narrative, please include relationship, if any, to the other person as well the ages of yourself and the other person. When you cannot recall specific information (i.e., age, date, etc.), it is acceptable to provide estimates or ranges. If you have questions, talk to your therapist prior to starting work on this section.

Masturbation Habits

List history of masturbation including age of onset, frequency (including changes over time), types of fantasy, and places (i.e., bedroom, bathroom, or outside of your residence). Please specifically note masturbation where you could view others or could possibly be observed by others while masturbating, including public restrooms, workplace/school settings, vehicles, and others' homes.

Include use, theft, or purchase of underwear, undergarments, or personal property for masturbation or sexual arousal. Include taking or keeping undergarments from sexual partners, relatives, friends, or strangers for masturbation or sexual arousal. Also include all incidents in which you returned someone's underwear or undergarments after using them for masturbation or sexual arousal.

Lastly, include masturbation to non-pornographic sexually stimulating images.

When you cannot recall specific information (i.e., age, date, etc.), it is acceptable to provide estimates or ranges. If you have questions, talk to your therapist prior to starting work on this section.

Pornography History

Include all activities related to use of pornography, including themes and interests. Include any sharing and/or requesting of nude or semi-nude images of yourself or others with another person (e.g., Sexting). If you cannot recall specific information (i.e., age, date, etc.), it is acceptable to provide estimates or ranges. If you have questions, talk to your therapist prior to starting work on this section.

Consensual Sexual Activity

Discuss your first consensual experience including ages of you and your partner, how you met, what types of activities you did together, how you communicated, how the sexual contact began and progressed through the duration of the relationship. In your discussion, please include information regarding the use of dating sites, chat rooms and other forms of social media.

When thinking back about subsequent or additional consensual sexual experiences you have had, what thoughts and feeling do you experience? What about those relationships has been impactful or influential regarding your current approach and engagement in consensual sexual relationships? As you look back, do any themes repeat themselves?

If you believe you have not had consensual sexual activity, describe what you think a healthy sexual relationship looks like.

When you cannot recall specific information (i.e., age, date, etc.), it is acceptable to provide estimates or ranges. If you have questions, talk to your therapist prior to starting work on this section.

Part I: Risks and Needs

.....

Note to Therapist: This section is for the therapist to complete during the treatment process with the client. It should not be handed to the client to complete outside of the therapeutic setting.

The following section addresses risk domains from common risk assessment tools (e.g. VASOR-2 and SOTIPS) that are normed on males who have been convicted of a sexual offense. The specific domains in this section address sexual interests and attitudes. This section is used in conjunction with Part I: Sexual Development to identify protective factors, risks and needs. This section should also be combined with a dynamic risk assessment on an on-going basis when assessing risk and need.

Areas to be explored include:

Sexual Attitudes and Beliefs²²⁵

1. Viewing oneself as sexually entitled
2. Viewing women with hostility
3. Viewing others as objects for sexual pleasure
4. Viewing sexual urges as uncontrollable
5. Believing children can consent to sexual acts
6. Believing sexual activity with children are not harmful
7. Viewing oneself more emotionally congruent with children than adults

This next section identifies risk domains pertinent to females who have been convicted of a sexual offense. While there is no normed risk assessment for this population, these risk domains are consistent with existing research.²²⁶

For female clients, the following risk factors should be explored :²²⁷

²²⁵McGrath, R. J., Lasher, M. P., & Cumming, G. F. (2012). The sex offender treatment intervention and progress scale (SOTIPS): Psychometric properties and incremental predictive validity with static-99 R. *Sexual Abuse: A Journal of Research and Treatment, 24*(5), 431-458.

²²⁶ For additional information on risk assessment and female offenders see the Appendix M: Female Sex Offender Risk Assessment of the Standards and Guidelines for the Assessment, Evaluation, Treatment and Behavioral Monitoring of Adult Sex Offenders.

²²⁷ Clark, D., & Howden-Windall, J. (2000). A retrospective study of criminogenic factors in the female prison population. London : Her Majesty's Prison Service; Denov, M. S., & Cortoni, F. (2006). Adult female sexual offenders. In C. Hilarski & J. Wodarski (Eds.) *Comprehensive mental health practices with sex offenders and their families* (pp. 71-99). New York: Hawthorne Press; Cortoni, F., Anderson, D., & Bright, D. (2002). Locus of control, coping and sexual offenders. In B. A. Schwartz & C. Cellini (Eds.), *The sex offender* (Vol. 4). Kingston, NJ : Civic Research Institute; Gannon, T. A., & Cortoni, F. (2010). *Female sexual offenders: Theory, assessment, and*

1. Prior child abuse behavior
2. Distorted cognitions about sexual offending/abuse
3. Intimacy deficits and problematic relationship(s)
4. Use of sex to regulate emotional state or fulfill need for intimacy
5. Sexual gratification and instrumental goals such as revenge or humiliation
6. Puts needs of co-offending partner above self and/or child(ren) and/or victim
7. Evidence of illegal, abusive or harmful sexual interest
8. Impulsivity

treatment. Hoboken, NJ: John Wiley & Sons; Gannon, T. A., Rose, M. R., & Ward, T. (2008). A descriptive model of the offense process for female sexual offenders. *Sexual Abuse: A Journal of Research and Treatment*, 20(3), 352-374.

Part I: Responsivity

.....

Note to Client & Therapist: This section is for the therapist and client to use collaboratively in session to begin the process of identifying the protective factors and strengths that can prevent a re-offense. This is also an opportunity to work on safety planning and treatment planning.

Part II: Sexual Offense History

Introduction

To the Client: This section is designed to assist you in gaining greater insight into your choice(s) to engage in sexually abusive/assaultive behavior. You will not be asked to provide names of the victims or specific locations where the behaviors occurred. You will be asked to be thoughtful and honest about your actions. It will be difficult work. Reach out to your therapist and peers for support. Be as truthful as you can be, although at times that may be painful. In doing so, you strengthen your resolve to not create another victim. When you cannot recall specific information (i.e., age, date, etc.), it is acceptable to provide estimates or ranges.

To the Therapist: This section of the packet was developed after a review of specific risk factors for sexual re-offense. Risk factors were identified from the Static-99(R), Sex Offender Treatment Intervention and Progress Scale (SOTIPS) and the Vermont Assessment of Sex Offender Risk - 2 (VASOR-2) manuals to identify specific risk areas related to sexual recidivism.

This is a collaborative process with the expectation that written work will be thoroughly discussed with the client in whatever treatment modality you find most appropriate. If you determine the client's individual needs dictate that the information be gathered via an alternative method (e.g., a client unable to write may need a scribe) that is fine and the CST should be consulted on such accommodations. It is important that the client's words be captured and then processed within the therapeutic alliance you have established with that client.

Informed Consent

As you engage in this process, it is important to work with your peers and treatment provider to gain an understanding of informed consent within the context of a sexual relationship. Informed consent means that a person has knowledge of what is happening *and* gives permission (verbal or non-verbal) for it to occur. There are **three rules** to informed consent:

Rule #1: Both parties must be able to say “Yes” or “No” without fear of penalty or harm. This may be done verbally, but there are non-verbal ways to say “Yes” or “No,” as well.

For example, if a person sets up a video camera and records in a public bathroom, there is no informed consent from the person in the public restroom, as they have no knowledge that this is occurring.

Now, in order for this to be an option for both parties, there must be a decision point at which time the parties are able to consent or not consent. For example, if someone streaks across the football field at half-time, the people in the bleachers have no opportunity to say “Yes” or “No” to viewing this behavior and as a result, there is no ability to provide informed consent.

Think back on your experiences and identify the non-verbal cues that you interpreted as “Yes.” Please also identify the non-verbal cues that you believe meant “No.”

Rule #2: Both parties must know what they are consenting to *and* both parties must understand the outcomes and consequences of that decision. This means both parties must have similar knowledge levels of what they are consenting to and understand what could possibly happen as a result of that decision. Part of this similar knowledge and understanding is about how the parties will feel about the decision years later as they mature and gain more in-depth understanding of the choice and resulting consequences.

Think back on your experiences and discuss a situation when this element was relevant and you and the other party equally understood the outcomes and consequences of the decision.

Rule #3: The two parties must have equal power.

This element is not only referring to use of physical strength. While it does include physical size and strength, it also includes if one party is in a position of authority or has some kind of power over the other party. For example, if one party makes a threat to kick the other party out of the residence for not complying.

Family Relationships Discussion

Additionally, sexual relationships within families are forbidden for a few reasons:

1. There are unfortunate biological consequences when closely matched DNA is combined for procreation.
2. Society imposes such rules because families are ideally a safe place for children and adults to thrive and develop without the complications of sexual relationships.
3. Within the structure of a family there is often an inherent power differential (e.g., parent to child, older sibling to younger sibling, aunt/uncle to niece/nephew, etc.)

Index Crime

It is important that your treatment and supervision team understand the events and behaviors regarding your index offense. The index offense refers to the sexually abusive/assaultive behaviors that resulted in your conviction. While you may have pleaded or been found guilty at trial of a different crime, it is important to identify what actually happened. Please take time to write about the following:

1. The nature of your relationship with the victim of the crime;
2. Length of time you knew that person;
3. Include gender and age of each victim(s);
4. Describe the sexual contact you engaged in;
5. Discuss the duration, frequency and location of the sexual assault;
6. Describe how you gained compliance from the victim(s);
7. Identify what elements of consent were non-existent;
8. Discuss how you convinced the victim(s) to keep the sexual abuse/assault a secret; and
9. Explain how you got caught.

Sexual Offense History Questionnaire

Sexual Contact with Minor Children

1. Since turning 18 years old, how many children have you had sexual contact with that were younger than 15 years old? _____
 - a. How old was the youngest victim? _____
 - b. How old was the oldest victim? _____
 - c. How many victims were male children? _____
 - i. How old was the youngest male victim? _____
 - ii. How old was the oldest male victim? _____
 - d. Were any of these children 12 years old or younger?²²⁸ Yes No

2. Prior to age 18, how many children have you had sexual contact with that were 4 or more years younger than yourself? _____
 - a. How old was the youngest victim? _____
 - b. How old was the oldest victim? _____
 - c. How many victims were male children? _____
 - i. How old was the youngest male victim? _____
 - ii. How old was the oldest male victim? _____

3. Since turning 25 years old, how many children have you had sexual contact with that were ages 15 or 16 years old? _____
 - a. How old was the youngest victim? _____
 - b. How old was the oldest victim? _____
 - c. How many victims were male children? _____
 - i. How old was the youngest male victim? _____
 - ii. How old was the oldest male victim? _____
 - d. Were any of these children 12 years old or younger? Yes No

4. Of the victims accounted for in the above questions:
 - a. Were any of the victims children who were strangers?²²⁹ Yes No
 - b. Were any of the victims children who trusted you and for whom you had a caretaking or authoritative role over? Yes No
 - c. Were any of the children related to you? Yes No

5. As of today, do you have an ongoing relationship with any of the people you had sexual contact with when they were (or are) children? If so, please call your therapist **now** and schedule a time so you may discuss this further.

²²⁸ The age of 12 or younger is based on the distinction between pubescent and pre-pubescent development stages. There is disagreement in the current research regarding the onset of puberty, and the SOMB recognizes the limitations of defining the criteria based on a specific age.

²²⁹ A victim is considered a stranger if the victim did not know the offender 24 hours prior to the sexually abusive/assaultive behavior.

Behavior: Voyeurism

Definition: Voyeurism refers to behaviors (including attempts) which involve looking into someone's home, bedroom or bathroom or any other place they assume is private, for the purposes of your sexual gratification.

Did you engage in this type of behavior? Yes No

If yes, please answer the following questions:

1. Were any of the victims under the age of 18? Yes No
If yes:
 - a. How many were 12 years old or younger? ____ How many were male? ____
 - b. How many were 13 years or older? ____ How many were male? ____
2. How many of the victims were 18 years old or older? ____ How many were males? ____
3. How many of the victims were strangers? _____
4. How many of the victims were relatives? _____
5. How many of the victims were intimate partners? _____
6. How old were you when you started? _____
7. How old were you the last time you did this? _____
8. Why did you stop?
9. During this time frame, how often did you engage in this behavior (e.g., 3 times per week)? _____
_____. If this answer varies during different periods of your life, please identify those time periods (either by age or month and year) and then list the frequency for those time frames.
10. Please write about engaging in this behavior. You do not have to identify specific individuals, but please describe them as a general group and be clear regarding things like general ages, genders and where you would engage in this behavior. Detail is important so that you and your therapist can better understand the context(s) in which you engaged in these behaviors.
11. Did you take photos or videos while engaged in this behavior? Yes No
If yes:
 - a. What did you do with those images once they were in your possession?
 - b. Where are they now?
12. As of today, do you have an ongoing relationship with any of the people you committed this behavior against? If so, please call your therapist **now** and schedule a time so you may discuss this further.

Behavior: Electronic Voyeurism

Definition: Using electronic devices to engage in voyeurism. Voyeurism refers to behaviors (including attempts) which involve looking into someone's home, bedroom or bathroom or any other place they assume is private, for the purposes of your sexual gratification. In this section, please include the taking of photos or video of people in various states of undress or sexual activity without their permission or knowledge. If you don't know if they were aware, assume they did not know and include them in your thoughts as you answer the following questions.

Did you engage in this type of behavior? Yes No

If yes, please answer the following questions:

1. Were any of the victims under the age of 18? Yes No
If yes:
 - a. How many were 12 years old or younger? ____ How many were male? ____
 - b. How many were 13 years or older? ____ How many were male? ____
2. How many of the victims were 18 years old or older? ____ How many were males? ____
3. How many of the victims were strangers? _____
4. How many of the victims were relatives? _____
5. How many of the victims were intimate partners? _____
6. How old were you when you started? _____
7. How old were you the last time you did this? _____
8. Why did you stop?
9. During this time frame, how often did you engage in this behavior (e.g. 3 times per week)? _____ . If this answer varies during different periods of your life, please identify those time periods (either by age or month and year) and then list the frequency for those time frames.
10. Please write about engaging in this behavior. You do not have to identify specific individuals, but please describe them as a general group and be clear regarding things like general ages, genders and where you would engage in this behavior. Detail is important so that you and your therapist can better understand the context(s) in which you engaged in these behaviors.
11. As best you can, identifying your thoughts and feelings during this time.
12. What did you do with those images once they were in your possession? Where are they now?
13. As of today, do you have an ongoing relationship with any of the people you committed this behavior against? If so, please call your therapist **now** and schedule a time so you may discuss this further.

Behavior: Exhibitionism or Exposing Behaviors

Definition: Include all incidents in which you accidentally or intentionally exposed (including attempts) your bare private parts (including in a vehicle) to unsuspecting persons in public places or in private places. Include incidents when you wore loose or baggy clothing that allowed your sexual organs to become exposed to others. Also include mooning, streaking or flashing behavior, having sex in a public place and public urination while in view of others.

Did you engage in this type of behavior? Yes No

If yes, please answer the following questions:

1. Were any of the victims under the age of 18? Yes No
If yes:
 - a. How many were 12 years old or younger? ____ How many were male? ____
 - b. How many were 13 years or older? ____ How many were male? ____
2. How many of the victims were 18 years old or older? ____ How many were males? ____
3. How many of the victims were strangers? _____
4. How many of the victims were relatives? _____
5. How old were you when you started? _____
6. How old were you the last time you did this? _____
7. Why did you stop?
8. During this time frame, how often did you engage in this behavior (e.g., 3 times per week)? _____ . If this answer varies during different periods of your life, please identify those time periods (either by age or month and year) and then list the frequency for those time frames.
9. Please write about engaging in this behavior. You do not have to identify specific individuals, but please describe them as a general group and be clear regarding things like general ages, genders and where you would engage in this behavior. Detail is important so that you and your therapist can better understand the context(s) in which you engaged in these behaviors.
10. Did you take photos or videos while engaged in this behavior? Yes No
If yes:
 - a. What did you do with those images once they were in your possession?
 - b. Where are they now?
11. As of today, do you have an ongoing relationship with any of the people you committed this behavior against? If so, please call your therapist **now** and schedule a time so you may discuss this further.

Behavior: Exposing Behaviors via the Internet

Definition: Incidents in which images (photo or video) of bare sexual organs are exposed over the internet during chats or via email or web link.

Have you ever engaged in this type of behavior? Yes No

If yes, please answer the following questions:

1. Were any of the victims under the age of 18? Yes No
If yes:
 - a. How many were 12 years old or younger? ____ How many were male? ____
 - b. How many were 13 years or older? ____ How many were male? ____
2. How many of the victims were 18 years old or older? ____ How many were males? ____
3. How many of the victims were strangers? _____
4. How old were you when you started? _____
5. How old were you the last time you did this? _____
6. Why did you stop?
7. Please write about engaging in this behavior. Describe how and in what context you exposed yourself via the internet. You do not have to identify specific individuals, but please describe them as a general group and be clear regarding things like general ages, genders and other common factors. Detail is important so you and your therapist can better understand the context(s) in which you engaged in these behaviors.
8. Did you take photos or videos while engaged in this behavior? Yes No
If yes:
 - a. What did you do with those images once they were in your possession?
 - b. Where are they now?
9. As of today, do you have an ongoing relationship with any of the people you committed this behavior against? If so, please call your therapist now and schedule a time so you may discuss this further.

Behavior: Frottage

Definition: Opportunistic sexual rubbing, bumping or touching against strangers or unsuspecting persons inside or outside the home. This includes sexual touching (including attempts) of others' private parts during any play, sexual hugging, horseplay, bathing, diaper changing, lap sitting, wrestling or athletic activities of unsuspecting persons in private or public places (e.g., babysitting, school, work, stores, gym, crowds.) All such behaviors are to be considered if done for the purpose of sexual gratification.

Did you engage in this type of behavior? Yes No

If yes, please answer the following questions:

1. Were any of the victims under the age of 18? Yes No
If yes:
 - a. How many were 12 years old or younger? ____ How many were male? ____
 - b. How many were 13 years or older? ____ How many were male? ____
2. How many of the victims were 18 years old or older? ____ How many were males? ____
3. How many of the victims were strangers? _____
4. How many of the victims were relatives? _____
5. How old were you when you started? _____
6. How old were you the last time you did this? _____
7. Why did you stop?
8. Please write about engaging in this behavior. You do not have to identify specific individuals, but please describe them as a general group and be clear regarding things like general ages, genders and where you would engage in frottage. Detail is important so that you and your therapist can better understand the context(s) in which you engaged in these behaviors.
9. Did you take photos or videos while engaged in frottage? Yes No
If yes:
 - a. What did you do with those images once they were in your possession?
 - b. Where are they now?
10. As of today, do you have an ongoing relationship with any of the people you committed this behavior against? If so, please call your therapist **now** and schedule a time so you may discuss this further.

Behavior: Sexual Contact Involving Force, Including Violence, Intimidation and/or Weapons

Definition: Force includes sexual contact (including attempts) with any person whom you physically hit or struck, physically restrained using your body strength or any object, or use of weapons, including implied or improvised weapons, posing a threat, continues after stating “no” or “stop” in order to prevent the person from resisting or escaping. Force may also include threats of harm against a victim's family members, pets and includes threats of destruction of personal property.

Definition of Intimidate: To frighten or instill fear in another, especially in order to make them do what one wants.

Did you engage in this type of behavior? Yes No

If yes, please answer the following questions:

1. Were any of the victims under the age of 18? Yes No
If Yes:
 - a. How many were 12 years old or younger? ____ How many were male? ____
 - b. How many were 13 years or older? ____ How many were male? ____
2. How many of the victims were 18 years old or older? ____ How many were males? ____
3. How many of the victims were strangers? ____
4. How many of the victims were relatives? ____
5. How many of the victims were intimate partners? ____
6. How old were you when you started? ____
7. How old were you the last time you did this? ____
8. Why did you stop?
9. During this time frame, how often did you engage in this behavior (e.g., 3 times per week)? _____. If this answer varies during different periods of your life, please identify those time periods (either by age or month and year) and then list the frequency for those time frames.
10. Please write about engaging in this behavior. You do not have to identify specific individuals, but please describe them as a general group and be clear regarding things like general ages, genders and where you would use violence, intimidation or weapons. Detail is important so that you and your therapist can better understand the context(s) in which you engaged in these behaviors.
11. Did you take photos or videos while engaged in this behavior? Yes No
If yes:
 - a. What did you do with those images once they were in your possession?
 - b. Where are they now?
12. As of today, do you have an ongoing relationship with any of the people you committed this behavior against? If so, please call your therapist **now** and schedule a time so you may discuss this further.

Behavior: Sexual Contact Involving Coercion

Definition: Coercion includes sexual contact (including attempts) with any person whose compliance you obtained through any non-violent form of manipulation despite the person's stated or unstated unwillingness to participate, including after the individual says "no" or "stop." Common forms of coercion include bribery, manipulation, threats, gifts, trickery, money, drugs, alcohol and friendship.

Did you engage in this type of behavior? Yes No

If yes, please answer the following questions:

1. Were any of the victims under the age of 18? Yes No
If Yes:
 - a. How many were 12 years old or younger? ____ How many were male? ____
 - b. How many were 13 years or older? ____ How many were male? ____
2. How many of the victims were 18 years old or older? ____ How many were males? ____
3. How many of the victims were strangers? _____
4. How many of the victims were relatives? _____
5. How many of the victims were intimate partners? _____
6. How old were you when you started? _____
7. How old were you the last time you did this? _____
8. Why did you stop?
9. During this time frame, how often did you engage in this behavior (e.g., 3 times per week)? _____. If this answer varies during different periods of your life, please identify those time periods (either by age or month and year) and then list the frequency for those time frames.
10. Please write about engaging in this behavior. You do not have to identify specific individuals, but please describe them as a general group and be clear regarding things like general ages, genders and how you would coerce your victims into compliance. Detail is important so that you and your therapist can better understand the context(s) in which you engaged in these behaviors.
11. Did you take photos or videos while engaged in this behavior? Yes No
If yes:
 - a. What did you do with those images once they were in your possession?
 - b. Where are they now?
12. As of today, do you have an ongoing relationship with any of the people you committed this behavior against? If so, please call your therapist now and schedule a time so you may discuss this further.

Behavior: Sexual Contact with Helpless or Incapacitated Victims

Definition of incapacitated: Temporarily or permanently impaired by drugs, alcohol, or mental and/or physical deficiency or disability. This person is unable to provide informed consent due to such impairment.

Definition of helpless: Physically helpless means unconscious, asleep, or otherwise unable to indicate willingness to act. This person is unable to defend him/herself or unable to access assistance to prevent the assault/abuse.

Did you engage in this type of behavior? Yes No

If yes, please answer the following questions:

1. Were any of the victims under the age of 18? Yes No
If Yes:
 - a. How many were 12 years old or younger? ____ How many were male? ____
 - b. How many were 13 years or older? ____ How many were male? ____
2. How many of the victims were 18 years old or older? ____ How many were males? ____
3. How many of the victims were strangers? _____
4. How many of the victims were relatives? _____
5. How many of the victims were intimate partners? _____
6. How old were you when you started? _____
7. How old were you the last time you did this? _____
8. Why did you stop?
9. During this time frame, how often did you engage in this behavior (e.g. 3 times per week)? _____ . If this answer varies during different periods of your life, please identify those time periods (either by age or month and year) and then list the frequency for those time frames.
10. Please write about engaging in this behavior, including if you purposely drugged or otherwise rendered someone incapable of stopping the sexual contact. You do not have to identify specific individuals, but please describe them as a general group and be clear regarding things like general ages, genders and where you would engage in this behavior. Detail is important so that you and your therapist can better understand the context(s) in which you engaged in these behaviors.
11. Did you take photos or videos while engaged in this behavior? Yes No
If yes:
 - a. What did you do with those images once they were in your possession?
 - b. Where are they now?
12. As of today, do you have an ongoing relationship with any of the people you committed this behavior against? If so, please call your therapist **now** and schedule a time so you may discuss this further.

Behavior: Sexual Contact While in a Position of Trust over the Victim.

Definition: Position of Trust means you have or have had authority over (e.g., babysitter, coach, younger relative, volunteer, tutor, mentor, institutional staff, etc.) another person.

Did you engage in this type of behavior? Yes No

If yes, please answer the following questions:

1. Were any of the victims under the age of 18? Yes No
If Yes:
 - a. How many were 12 years old or younger? ____ How many were male? ____
 - b. How many were 13 years or older? ____ How many were male? ____
2. How many of the victims were 18 years old or older? ____ How many were males? ____
3. How many of the victims were strangers? _____
4. How many of the victims were relatives? _____
5. How old were you when you started? _____
6. How old were you the last time you did this? _____
7. Why did you stop?
8. During this time frame, how often did you engage in this behavior (e.g., 3 times per week)?
_____. If this answer varies during different periods of your life, please identify those time periods (either by age or month and year) and then list the frequency for those time frames.
9. Please write about engaging in this behavior. You do not have to identify specific individuals, but please describe them as a general group and be clear regarding things like general ages, genders and how you would gain compliance from your victims. Detail is important so that you and your therapist can better understand the context(s) in which you engaged in these behaviors.
10. Did you take photos or videos while engaged in this behavior? Yes No
If yes:
 - a. What did you do with those images once they were in your possession?
 - b. Where are they now?
11. As of today, do you have an ongoing relationship with any of the people you committed this behavior against? If so, please call your therapist **now** and schedule a time so you may discuss this further.

Behavior: Electronic Solicitation of a Minor

Definition: Includes all attempts to meet or actually having made arrangements to meet, a person under the age of 18 years old via electronic devices including computers, cell phones, text messages, e-mails, chat rooms, cyber-sex, live web-cams, electronic bulletin board systems, Internet Relay Chat, DCC chat channels, private bulletin boards or other user groups.

Did you engage in this type of behavior? Yes No

If yes, please answer the following questions:

1. Were any of the victims under the age of 18? Yes No
If yes:
 - a. How many were 12 years old or younger? ____ How many were male? ____
 - b. How many were 13 years or older? ____ How many were male? ____
2. How many of the victims were strangers? _____
3. How many of the victims were relatives? _____
4. How old were you when you started? _____
5. How old were you the last time you did this? _____
6. Why did you stop?
7. During this time frame, how often did you engage in this behavior (e.g., 3 times per week)? _____ . If this answer varies during different periods of your life, please identify those time periods (either by age or month and year) and then list the frequency for those time frames.
8. Please write about engaging in this behavior. You do not have to identify specific individuals, but please describe them as a general group and be clear regarding things like general ages, genders and why you chose them. Detail is important so that you and your therapist can better understand the context(s) in which you engaged in these behaviors.
9. Do you have screen shots or records of these electronic conversations? Did you send or receive photos or videos? Yes No
If yes:
 - a. What did you do with those images once they were in your possession?
 - b. Where are they now?
10. As of today, do you have an ongoing relationship with any of the people you committed this behavior against? If so, please call your therapist **now** and schedule a time so you may discuss this further.

Behavior: Viewing of Child Sexual Abuse Images (aka child pornography).

Definition: Child Sexual Abuse Images are any visual depiction of sexually explicit conduct involving a minor (persons less than 18 years old). Images of child sexual abuse are also referred to as child pornography.²³⁰

Illegal images may contain a nude picture of a child that is deemed sexually suggestive.

There may be times when it was difficult to identify the ages of the victims captured in the images. If such instances exist, please talk to your therapist prior to completing this section. It may be beneficial to complete this section regardless of a clear yes/no answer.

Did you engage in this type of behavior? Yes No I'm not sure

If yes, please answer the following questions:

1. How many were 12 years old or younger? ____ How many were male? ____
2. How many were 13 years or older? ____ How many were male? ____
3. How old were you when you started? _____
4. How old were you the last time you did this? _____
5. Why did you stop?
6. During this time frame, how often did you engage in this behavior (e.g., 3 times per week)? _____. If this answer varies during different periods of your life, please identify those time periods (either by age or month and year) and then list the frequency for those time frames.
3. Please write about your experiences engaging in this behavior. Include specific themes and images for which you searched. Detail is important so that you and your therapist can better understand the context(s) in which you engaged in this behavior.
7. Where did you store images you found? What did you do with those images once they were in your possession? Where are they now?
8. As of today, do you have an ongoing relationship with any of the people you committed this behavior against? If so, please call your therapist now and schedule a time so you may discuss this further.

²³⁰ Definition retrieved from the following website: <https://www.justice.gov/criminal-ceos/child-pornography>.

Behavior: Create and Distribute Child Sexual Abuse Images

As you work on this section please exclude any sexting as a youth with a same age peer on a consensual basis. If you have questions, please consult your therapist.

Did you create images of the sexual abuse of children? Yes No

Did you distribute images of the sexual abuse of children? Yes No

If yes, please answer the following questions:

1. How many were 12 years old or younger? ____ How many were male? ____
2. How many were 13 years or older? ____ How many were male? ____
3. How old were you when you started? _____
4. How old were you the last time you did this? _____
5. Why did you stop?
6. During this time frame, how often did you engage in this behavior (e.g., 3 times per week)? _____. If this answer varies during different periods of your life, please identify those time periods (either by age or month and year) and then list the frequency for those time frames.
7. Please write about creating and/or distributing sexually abusive images of children. Include information about how you obtained victims and adult offenders for the creation of the images. Discuss why you chose the specific images and themes to produce and/or distribute. Detail is important so that you and your therapist can better understand the context(s) in which you engaged in this behavior.
8. Do you now possess sexually abusive images of children? What did you do with those images once they were in your possession? (If previously discussed in #4, please state so. There is no need to repeat the information.) Where are the images now?
9. Are you currently benefiting, financially or otherwise, from any of the images you created and/or distributed?
10. As of today, do you have an ongoing relationship with any of the people you committed this behavior against? If so, please call your therapist **now** and schedule a time so you may discuss this further.

Behavior: Plan, Prepare, Assist and/or Provide a Victim for Someone Else to Sexually Assault.

Definition: Sex trafficking involves the coercion of an individual to engage in commercial sex against their will. It is important to note that, according to federal and state law, any person under the age of eighteen years of age induced into commercial sex is a victim of sex trafficking.²³¹

Did you engage in this type of behavior? Yes No

If yes, please answer the following questions:

1. Were any of the victims under the age of 18? Yes No
If Yes:
 - a. How many were 12 years old or younger? ____ How many were male? ____
 - b. How many were 13 years or older? ____ How many were male? ____
2. How many victims were 18 years old or older? ____ How many were male? ____
3. How many victims were strangers? ____
4. How many victims were relatives? ____
5. How many of the victims were intimate partners? ____
6. How old were you when you started? ____
7. How old were you the last time you did this? ____
8. Why did you stop?
9. During this time frame, how often did you engage in this behavior (e.g., 3 times per week)? _____. If this answer varies during different periods of your life, please identify those time periods (either by age or month and year) and then list the frequency for those time frames.
10. Please write about engaging in this behavior. You do not have to identify specific individuals, but please describe them as a general group and be clear regarding things like general ages, genders and where you would engage in in this behavior. Detail is important so that you and your therapist can better understand the context(s) in which you engaged in these behaviors.
11. Did you take photos or videos while engaged in this behavior? Yes No
If yes:
 - a. What did you do with those images once they were in your possession?
 - b. Where are they now?
12. Are you currently benefiting, financially or otherwise, from such behavior? Yes No
13. As of today, do you have an ongoing relationship with any of the people you committed this behavior against? If so, please call your therapist **now** and schedule a time so you may discuss this further.

²³¹Definition adapted from the following website: <https://sites.google.com/a/state.co.us/cdps-prod/home/human-trafficking-council/resources/basics>.

Behavior: Pay (currency, goods or services) Someone to Engage in a Sexual Act.

Did you engage in this type of behavior? Yes No

If yes, please answer the following questions:

1. Were any of the victims under the age of 18? Yes No
If Yes:
 - a. How many were 12 years old or younger? ____ How many were male? ____
 - b. How many were 13 years or older? ____ How many were male? ____
2. How many of the victims were 18 years old or older? ____ How many were male? ____
3. How many victims were strangers? _____
4. How many victims were relatives? _____
5. How old were you when you started? _____
6. How old were you the last time you did this? _____
7. Why did you stop?
8. During this time frame, how often did you engage in this behavior (e.g., 3 times per week)?
_____. If this answer varies during different periods of your life, please identify those time periods (either by age or month and year) and then list the frequency for those time frames.
9. Please write about engaging in this behavior. You do not have to identify specific individuals, but please describe them as a general group and be clear regarding things like general ages, genders and where you would engage in in this behavior. Detail is important so that you and your therapist can better understand the context(s) in which you engaged in these behaviors.
10. Did you take photos or videos while engaged in this behavior? Yes No
If yes:
 - a. What did you do with those images once they were in your possession?
 - b. Where are they now?
11. As of today, do you have an ongoing relationship with any of the people you committed this behavior against? If so, please call your therapist **now** and schedule a time so you may discuss this further.

If there are other sexual behaviors not included above but that you have engaged in, please briefly identify here and then contact your therapist for further discussion (e.g., paraphilias, sexual sadism, bestiality).

Insights

What insights have you gained from this written journey?

Part II: Risks and Needs

.....

Note to Therapist: This section is for the therapist to complete during the treatment process with the client. It should not be handed to the client to complete outside of the therapeutic setting.

The following section addresses risk domains from common risk assessment tools (e.g. VASOR-2 and SOTIPS) that are normed on males who have been convicted of a sexual offense. The specific domains in this section address sexual interests and attitudes. This section is used in conjunction with previously completed sections of this packet to identify protective factors, risks and needs. This section should also be combined with a dynamic risk assessment on an on-going basis when assessing risk and need.

Areas to be explored include:²³²

1. Viewing oneself as sexually entitled
2. Viewing women with hostility
3. Viewing others as objects for sexual pleasure
4. Viewing sexual urges as uncontrollable
5. Believing children can consent to sexual acts
6. Believing sexual activity with children is not harmful
7. Viewing oneself more emotionally congruent with children than adults

This next section identifies risk domains pertinent to females who have been convicted of a sexual offense. While there is no normed risk assessment for this population, these risk domains are consistent with existing research.²³³

For female clients, the following risk factors should be explored:²³⁴

²³² McGrath, R. J., Lasher, M. P., & Cumming, G. F. (2012). The sex offender treatment intervention and progress scale (SOTIPS): Psychometric properties and incremental predictive validity with static-99 R. *Sexual Abuse: A Journal of Research and Treatment, 24*(5), 431-458.

²³³ For additional information on risk assessment and female offenders see the Appendix M: Female Sex Offender Risk Assessment of the Standards and Guidelines for the Assessment, Evaluation, Treatment and Behavioral Monitoring of Adult Sex Offenders.

²³⁴ Clark, D., & Howden-Windall, J. (2000). A retrospective study of criminogenic factors in the female prison population. London: Her Majesty's Prison Service; Denov, M. S., & Cortoni, F. (2006). Adult female sexual offenders. In C. Hilarski & J. Wodarski (Eds.) *Comprehensive mental health practices with sex offenders and their families* (pp. 71-99). New York: Hawthorne Press; Cortoni, F., Anderson, D., & Bright, D. (2002). Locus of control, coping and sexual offenders. In B. A. Schwartz & C. Cellini (Eds.), *The sex offender* (Vol. 4). Kingston, NJ: Civic Research Institute; Gannon, T. A., & Cortoni, F. (2010). Female sexual offenders: Theory, assessment, and treatment. Hoboken, NJ: John Wiley & Sons; Gannon, T. A., Rose, M. R., & Ward, T. (2008). A descriptive model of the offense process for female sexual offenders. *Sexual Abuse: A Journal of Research and Treatment, 20*(3), 352-374.

1. Prior child abuse behavior
2. Distorted cognitions about sexual offending/abuse
3. Intimacy deficits and problematic relationship(s)
4. Use of sex to regulate emotional state or fulfill need for intimacy
5. Sexual gratification and instrumental goals such as revenge or humiliation
6. Puts needs of co-offending partner above self and/or child(ren) and/or victim
7. Evidence of illegal, abusive or harmful sexual interest
8. Impulsivity

Part II: Responsivity

Note to Client & Therapist: This section is to be used collaboratively to continue building on identified protective factors and client strengths to prevent re-offense. This is also an opportunity to work on meaningful safety planning and to further individualize treatment planning. As you further discuss sexual risk management the following areas should be explored:

1. Management of emotional states
2. Substance use
3. Comments, thought and behaviors supportive of sexual offending
4. Sexual arousal to offense to inappropriate stimuli

Part III: Talley Sheet

<u>SOMB Required Areas of Sexual Offense Disclosure Process</u>			
Behavior	Yes (Check Box)	Number of Victims	How Many Victims Were Minors?
Sexual contact with underage persons (persons younger than age 15 while the offender is age 18 or older)	<input type="checkbox"/>		N/A
Sexual contact with relatives whether by blood, marriage, or adoption, or where a relationship has the appearance of a family relationship (a dating or live-in relationship exists with the person(s) natural, step or adoptive parent)	<input type="checkbox"/>		
Use of violence to engage in sexual contact including physical restraint and threats of harm or violence toward a victim or victim's family members or pets, through use of a weapon, or through verbal/non-verbal means	<input type="checkbox"/>		
Sexual offenses (including touching or peeping) against persons who appeared to be asleep, were drugged, intoxicated or unconscious, or were mentally/physically helpless or incapacitated.	<input type="checkbox"/>

Appendix R: Parole Guidelines for Discretionary Release on Determinate-Sentenced Sex Offenders

These guidelines are designed to inform the Parole Board of information regarding progress in treatment, or criteria information for those not currently in treatment, for determinate-sentenced sexual offenders. Those offenders who have demonstrated treatment progress or meet certain criteria may be better suited for consideration of discretionary parole. These guidelines may be considered as a component in the decision-making process of the Parole Board among other components considered (e.g. lack of mandatory parole, Code of Penal Discipline/institutional behavior, risk assessment, victim input, etc.).

1. In treatment at the Department of Corrections
 - A. Use the same treatment criteria as the indeterminate sentence offenders based on the standard format
 1. *Meets the criteria for successful progress in treatment in prison, or*
 2. *Does not meet the criteria for successful progress in treatment in prison*
2. Not in treatment at the Department of Corrections
 - A. Not on wait list for treatment (Signified by a "D" designation)
 1. *Lack of recommendation for discretionary parole*
 - B. On wait list for treatment (Signified by a "R" designation)
 1. Not designated Sexually Violent Predator (SVP), and
 2. No history of prior sex crime conviction or adjudication (1 sex crime conviction), and
 3. No history of parole or community corrections revocation during the current sentence to the Department of Corrections, and
 4. Does not have a "P" designation signifying a treatment placement refusal or failure.

No objection to recommendation for discretionary parole
 - C. On wait list for treatment
 1. Designated a SVP, or
 2. Have 2 or more sex crime convictions or adjudications, including factual basis, or
 3. History of parole or community corrections revocation during the current sentence to the Department of Corrections, or

4. On the waitlist with a "P" designation signifying a treatment placement refusal or failure

Objection to recommendation for discretionary parole

Appendix S: Sexual Offenses Identified in Colorado Revised Statute

The Colorado General Assembly has identified sexual offenses in §16-11.7-102(3). The listed offenses include:

“Sex offense” means any felony or misdemeanor offense described in this subsection (3) as follows:

- (a) (I) Sexual assault, in violation of section 18-3-402, C.R.S.; or
(II) Sexual assault in the first degree, in violation of section 18-3-402, C.R.S., as it existed prior to July 1, 2000;
- (b) Sexual assault in the second degree, in violation of section 18-3-403, C.R.S., as it existed prior to July 1, 2000;
- (c) (I) Unlawful sexual contact, in violation of section 18-3-404, C.R.S.; or
(II) Sexual assault in the third degree, in violation of section 18-3-404, C.R.S., as it existed prior to July 1, 2000;
- (d) Sexual assault on a child, in violation of section 18-3-405, C.R.S.;
- (e) Sexual assault on a child by one in a position of trust, in violation of section 18-3-405.3, C.R.S.;
- (f) Sexual assault on a client by a psychotherapist, in violation of section 18-3-405.5, C.R.S.;
- (g) Enticement of a child, in violation of section 18-3-305, C.R.S.;
- (h) Incest, in violation of section 18-6-301, C.R.S.;
- (i) Aggravated incest, in violation of section 18-6-302, C.R.S.;
- (j) Human trafficking of a minor for sexual servitude, as described in section 18-3-504(2), C.R.S.;
- (k) Sexual exploitation of children, in violation of section 18-6-403, C.R.S.;
- (l) Procurement of a child for sexual exploitation, in violation of section 18-6-404, C.R.S.;
- (m) Indecent exposure, in violation of section 18-7-302, C.R.S.;
- (n) Soliciting for child prostitution, in violation of section 18-7-402, C.R.S.;
- (o) Pandering of a child, in violation of section 18-7-403, C.R.S.;
- (p) Procurement of a child, in violation of section 18-7-403.5, C.R.S.;
- (q) Keeping a place of child prostitution, in violation of section 18-7-404, C.R.S.;
- (r) Pimping of a child, in violation of section 18-7-405, C.R.S.;
- (s) Inducement of child prostitution, in violation of section 18-7-405.5, C.R.S.;
- (t) Patronizing a prostituted child, in violation of section 18-7-406, C.R.S.;
- (u) Criminal attempt, conspiracy, or solicitation to commit any of the offenses specified in this subsection (3);
- (v) Class 4 felony internet luring of a child, in violation of section 18-3-306(3), C.R.S.;

- (w) Internet sexual exploitation of a child in violation of section 18-3-405.4, C.R.S.;
- (x) Public indecency, committed in violation of section 18-7-301(2)(b), C.R.S., if a second offense is committed within five years of the previous offense or a third or subsequent offense is committed; or
- (y) Invasion of privacy for sexual gratification, as described in section 18-3-405.6, C.R.S.
- (z) Unlawful electronic sexual communication, in violation of section 18-3-418; or
- (aa) Unlawful sexual conduct by a peace officer, in violation of section 18-3-405.7.

Appendix T: Use Immunity Determination

Standard 3.160(B)(3) outlines required Core Treatment Components for sex offense-specific treatment and includes “acceptance of responsibility for offending and abusive behavior.” However, per Standard 3.162, Clients Who Have Filed a Post-Conviction Motion or Appeal, there may be instances when the requirement is delayed because a client has filed a post-conviction motion or appeal that, if successful, may result in a new trial. In such cases, if the treatment provider wants to deviate from the Standards, the SOMB requires treatment providers to determine if Use Immunity has been granted by the Court. The purpose of this Appendix is to define Use Immunity and provide guidance to providers to determine if a Use Immunity Order exists.

What is Use Immunity?

A person has a constitutional right not to be compelled to be a witness against themselves.²³⁵ This means that a person cannot be forced to answer a question or provide information if the answer to that question or the information that would be provided would put the person at risk of criminal prosecution.²³⁶ Refusing to answer a question or provide information on this basis is sometimes referred to as “asserting Fifth Amendment rights.”

A defendant retains their Fifth Amendment rights after conviction, including while serving a probationary or other sentence.²³⁷ This means that clients who have been convicted, but are challenging their conviction or sentence via post-conviction motion or appeal, may assert these rights because of the possibility they will face retrial and that any statements made or information provided may be used against them in that retrial. Importantly, a person cannot rely on an assertion of Fifth Amendment rights to completely refuse to participate in treatment before any question is posed.²³⁸ Rather, to be valid, the right against self-incrimination must be asserted in response to a question or request for information where the answer or response would expose that person to criminal liability.²³⁹

In the context of treatment, one example of this would be a question posed regarding the crime of conviction. In this example, assume the client makes an admission of criminal sexual behavior related to the crime of conviction instead of exercising their right to remain silent. If the client is successful on appeal, and if a new trial is granted, the prosecution would be able to use that admission of guilt, obtained in treatment, as evidence against the client in the second trial. Therefore, in this circumstance, the client may choose to assert Fifth

²³⁵ *People v. Blackwell*, 251 P.3d 468, 474 (Colo. App. 2010).

²³⁶ *People v. Ruch*, 379 P.3d 309, 313 (Colo. 2016); *People v. Roberson*, 377 P.3d 1039, 1042-43 (Colo. 2016).

²³⁷ *Roberson*, 377 P.3d at 1043.

²³⁸ *Id.* at 316.

²³⁹ *Id.*

Amendment rights and refuse to answer the question, and they cannot be unsuccessfully discharged from treatment (see 3.160(B)(3)(i)) nor face a substantial penalty for doing so. However, Colorado law provides for the option of a grant of Use Immunity.²⁴⁰ An order granting Use Immunity means that the prosecution cannot use any information directly or indirectly obtained from the immunized client against the client in any way, including in a second trial if the client's appeal or post-conviction motion is successful. The order granting Use Immunity permits a client who wishes to make admission in treatment, but does not want those admissions used against them in a subsequent proceeding, to fully engage in treatment without fear of that participation being used against them in a future proceeding. Therefore, a client who wishes to fully engage in treatment may request that the prosecution offer, and the judge grant, Use Immunity. Use Immunity can be granted by a judge only at the request of the prosecution.²⁴¹

A Use Immunity Order is enforceable by the judge and binds all prosecutors, state and federal.²⁴² If questions arise as to whether an answer is protected by a Use Immunity Order, the court must resolve those issues. If Use Immunity has been granted, a client cannot successfully assert Fifth Amendment rights and refuse to answer questions that are covered by the Use Immunity order,²⁴³ and a client can be held in contempt for refusing to answer or suffer other criminal liability.²⁴⁴ Seeking a Use Immunity agreement can be an effective way to avoid delays in completing treatment while a client is appealing their conviction.

Determining if a Use Immunity Order Exists

There are several options for determining if a Use Immunity Order is in place. A treatment provider may:

- A. Ask the client to provide a copy of an existing Use Immunity Order;
- B. Ask the supervising officer to review the Record of Action for a court order granting Use Immunity;
- C. Contact the prosecuting attorney to determine if Use Immunity has been granted; or
- D. Review the court file to determine if Use Immunity has been granted by the Court.

²⁴⁰ See § 13-90-118, C.R.S.

²⁴¹ *Harding v. People*, 708 P.2d 1354, 1358 (Colo. 1985); *People v. Eggert*, 923 P.2d 230, 233 (Colo. App. 1995).

²⁴² *People v. Mulberry*, 919 P.2d 835, 837 (Colo. App. 1995); Hood, Will, *Witness Immunity Under Colorado Law*, Colo. Law., December 1998, at 37-8.

²⁴³ *People v. Manning*, 672 P.2d 499, 512-13 (Colo. 1983) (“[u]se-immunity is coextensive with the defendant's privilege against self-incrimination and, when granted, leaves an accused in substantially the same position as if she had not relinquished her constitutional rights at all”).

²⁴⁴ *People v. Mulberry*, 919 P.2d 835, 837 (Colo. App. 1995) (“...pronouncement before the trial court by an immunized witness that he or she will not testify as required by the court's order is a direct criminal contempt”); *People v. Lucero*, 584 P.2d 1208, 1211 (Colo. 1978) (“[t]he court's authority to punish for contempt of court a witness who disobeys an order to testify issued under section 13-90-118...cannot be seriously questioned”); *People v. Castango*, 674 P.2d 978, 979-80 (Colo. App. 1983) (prosecution of defendant who had been granted immunity but persisted in his refusal to testify was not barred by immunity statute or by principles of fairness).

Appendix U: Statutory Purview of the Standards and Guidelines for the Assessment, Treatment and Behavioral Monitoring of Adult Sex Offenders

The SOMB recognizes that that the *Standards and Guidelines* can be utilized as best practices, where there are concerns of abusive, harmful, or illegal sexual behavior, in the following situations:

- 1) Individuals convicted of a sex crime in federal court;
- 2) Individuals convicted of a sex crime in other states, including those who are being supervised in Colorado under Interstate Compact;
- 3) Individuals who have been investigated and charged with a sex crime but have not as yet entered a guilty plea, and have individually elected to undergo treatment which is not court ordered;
- 4) Individuals who were found not guilty by reason of insanity to stand trial of a sex offense; or
- 5) Individuals ordered to complete an evaluation or treatment under a dependency and neglect order

This is not an exhaustive list and there may be other situations where these *Standards and Guidelines* may serve as best practice.

Finally, under Standard 2.250, evaluators completing pre-plea sex offense-specific evaluations must meet all Standards criteria or note where the evaluation does not comply with Standards, even for clients who do not meet the definition of a sex offender.

Appendix V: Lifetime Supervision Criteria

Table of Contents

Introduction.....	314
Additional Guiding Principles for Working with Sex Offenders on Lifetime Supervision.....	316
LS 1.000 Criteria for Release from Prison parole.....	317
LS 2.000 Criteria for Reduction in Level of Supervision While on Parole and Discharge from Parole.....	320
LS 3.000 Criteria for Reduction in Level of Supervision While on Probation and Discharge from Probation.....	325
LS 4.000 Criteria for Successful Progress in Treatment.....	330

Introduction

In 1998, the Colorado General Assembly passed legislation directing the Sex Offender Management Board (hereafter SOMB), in collaboration with the Department of Corrections, the Judicial Branch and the Parole Board to establish the criteria by and the manner in which a sex offender who is subject to lifetime supervision may demonstrate that he or she would not pose an undue threat to the community if released on parole or to a lower level of supervision while on parole or probation or if discharged from parole or probation and the methods of determining whether a sex offender has successfully progressed in treatment (Section 18-1.3-1009 C.R.S.). The court and the parole board may use these Criteria to assist in making decisions concerning release of a sex offender, reduction of the level of supervision for a sex offender, and discharge of a sex offender.

Supervising parole and probation officers and treatment providers should utilize these Criteria in making recommendations to the court and or the parole board regarding release, reduction in levels of supervision and discharge of sex offenders.

These Criteria do not stand alone. They are based on the Guiding Principles of the *Standards and Guidelines for the Assessment, Evaluation, Treatment and Behavioral Monitoring of Adult Sex Offenders* (hereafter, *Standards*). Treatment for sex offenders under lifetime supervision must be consistent with the existing *Standards*.

Progress in treatment relies on consistent reduction/management of dynamic risk factors based on ongoing assessments of the client's overall risk profile and treatment needs. A comprehensive evaluation of risk factors and treatment needs relies on accurate identification of static and dynamic risk factors. It's important to consider a client's overall risk profile, as well as, singular risk factors that are elevated to a level that may create an undue risk to the community. The accuracy of risk and need assessments is impacted by the client's level of openness and honesty during treatment and evaluation processes. CST's should work collaboratively to share information relevant to informing risk factors and treatment needs. Results of assessments should not stand alone and all clinical indicators should be used to inform a client's risk to the community. A client's overall risk profile can inform decisions to determine levels of supervision.

The intent of the lifetime supervision of sex offender is to reduce risk to the community. Although these Criteria are written in a format that indicates what individuals must do to be released, moved to lower levels of supervision, discharged or to demonstrate successful progress in treatment, this does not imply that any or all individuals on lifetime supervision will be able to meet criteria for any of these reductions in levels of supervision or complete treatment. Progress in treatment and assessment regarding whether or not these criteria are met must be measured by behavior that indicates lessened risk, not by any passage of time. In some cases, there may be overlap among the Criteria. This is a natural outcome of the community supervision team structure and the interplay between the team members.

For the purposes of these criteria, successful progress in treatment is a process that involves a reduction of supervision levels that coincide with the clients' ability to reduce risk by effectively

managing identified risk factors. Clients should understand that many risk factors are not fully eliminated but require ongoing management and the ability to actively and consistently employ intervention strategies.

Just as a client can progress through the levels of treatment and supervision, he/she can regress or be revoked for certain behaviors. If an individual is consistently failing to meet criteria for progression, the team should evaluate whether the current level of care and supervision is intensive enough to manage the current level of risk.

Like the original *Standards*, these criteria are consistent with current research and best practices known today.

Additional Guiding Principles for Working with Sex Offenders on Lifetime Supervision

.....

These Guiding Principles serve as a part of the philosophical foundation of these Criteria. They are not to be used alone. They are intended to be used in conjunction with the Guiding Principles in the *Standards and Guidelines for the Assessment, Evaluation, Treatment and Behavioral Monitoring of Adult Sex Offenders*, located in the front section of this publication.

- LS1. Because of the long-term nature of the work with sex offenders on lifetime supervision, and the concomitant risks to supervising officers and treatment providers, there is greater risk of complacency and inaccurate risk assessment. Supervising officers, treatment providers and their employing agencies should take steps to ensure the following:
- Adequate clinical and administrative supervision;
 - Regular case audits;
 - Critical incident debriefings;
 - Support for trauma reactions;
 - Methods for transferring cases as needed; and
 - Adequate self-care.

LS 1.000: Criteria for Release from Prison to Parole

.....

1.010 In order to demonstrate that the sex offender would not pose an undue threat to the community if released from prison to parole, he or she must meet the criteria in each of the following areas of focus:

A. Criminal Behavior Past and Present

1. The offender acknowledges and takes full responsibility for the crime of conviction.
2. The offender has adequate plans to address components of the crime(s) that pose current risk as identified in the mental health sex offense-specific evaluation, treatment plan or relapse prevention plan. Such components may be, but are not limited to:
 - Initial charge versus the conviction or plea
 - Facts and circumstances of the crime
 - Premeditation, grooming or predatory behavior
 - Nature of the crime was incidental to another crime or was spontaneous
 - The use of threats, violence or weapons
 - Age of victim(s) or the presence of any mental or physical disability in the victim(s)
 - Any conviction other than the instant offense for a violent crime per CRS 16-11-309

B. Sentence Failures

1. The offender acknowledges reasons for sentence failures (which could include, but are not limited to deferred prosecutions or judgments, probation, community correction, or parole), as verified by official record, and has made progress in addressing those reasons or demonstrates the presence of a plan that addresses those issues.

C. Participation in Programs

1. Required participation in the Sex Offender Treatment and Management Program (SOTMP). SOTMP program staff report offender compliance with recommended program plan and sufficient progress in treatment;
2. Demonstrated participation in all recommended programs. Positive participation and recommendations from staff of each program (based on program compliance) or a clearly established plan to obtain recommended programming in the community where placement in the community does not pose an undue risk;

3. If the offender is placed in community corrections, he or she has demonstrated positive participation and progress as indicated by recommendation from Community Corrections staff and SOMB approved sex offense-specific treatment provider.
- D. Code of Penal Discipline Rules Convictions, Escapes or Absconds
Discussion: Non-compliance with rules in a highly structured environment like DOC is highly related to risk of re-offense.
1. No COPD rules convictions in the last 12 months.
 2. No drug violations and demonstrates all clean UAs for the last 12 months.
 3. No sexual violations in DOC for a minimum period of the last 2 years.
- E. Classification Level Changes
1. The offender has had no increase in classification level in the last 12 months.
- F. Risk Assessment
1. The offender has completed the SOTMP evaluation (in adherence to SOMB *Standards and Guidelines* and including the administration of the DCJ Sex Offender Risk Scale) and has a recommendation from the SOTMP program staff, which is based on the evaluation, for release to parole.
- G. Victim Input (Pursuant to 17-22.5-404 (2) (a) (I) this may include the victim or a relative of the victim)
1. The offender has had no contact with the victim, other than therapeutically approved contact. (Contact means any kind of communication either direct or indirect by the offender with the victim and includes but is not limited to physical proximity, written correspondence, electronic, telephone or through third parties.)
 2. The offender is not engaging in victim blaming.
 3. The offender is not engaging in harassment, manipulation or coercion of the victim.
 4. Offender has demonstrated support for the victim's recovery, minimally at the level of no contact, as verified by SOTMP staff.
- H. Age of Offender at Offense vs Date of Parole Hearing
1. The offender demonstrates the emotional maturity necessary to predict a successful release to parole.
- I. Parole Plan
1. The offender's Parole plan minimally includes the following:

- No undue level of risk is indicated in any part of the parole plan or recommendations from any DOC staff.
- The offender has an appropriate plan to safely transition back to the community.
- The home living situation is free from former and potential victims.
- The offender has appropriate employment plans with lack of access to potential victims.
- The offender has access to and demonstrates willingness to participate in sex offense-specific treatment and other recommended treatment if released on Parole.
- The appropriate level of supervision and containment is available where the offender plans to live.
- The offender has a realistic plan to pay restitution based on a his or her ability to pay.

J. Honesty

1. The offender demonstrates truthful, complete and non-evasive answers to all questions posed by the parole board members.

LS 2.000: Criteria for Reduction in Level of Supervision While on Parole and Discharge from Parole

2.010 In order to demonstrate that the sex offender would not pose an undue threat to the community if placed on a lower level of supervision while on parole, he or she must meet the reduction in supervision criteria in each of the following areas of focus; in order to demonstrate that he or she would not pose an undue threat to the community if discharged from parole, he or she must meet the discharge criteria in each of the following areas of focus:

A. Community Supervision Team Staffing

Reduced Supervision: The team considers all information below and other appropriate information to make any determination regarding movement to lower levels of supervision. All team members must agree to the reduction in the level of supervision.

No exceptions will be made for reduction in supervision from level 1 (maximum). Any exception made to the requirements for movement from levels other than level 1 must be made by a consensus of the community supervision team and the parole board. In such a case, reasons for movement to a lower level of supervision when criteria are not met must be documented as well as any resulting potential risk to the community.

Discharge: In any case when an offender is being considered for recommendation of discharge from lifetime supervision, the offender must demonstrate that he or she would not pose an undue threat to the community if allowed to live in the community without supervision. The team considers all information below and other appropriate information to make any determination regarding discharge from lifetime supervision. All team members must agree to the discharge from supervision.

The supervising officer will document what criteria are met or not met at any consideration of reduction in level of supervision or discharge and the decision of the community supervision team.

Discussion: If an offender is consistently failing to meet criteria for progression, the team should evaluate whether the current level of supervision is intensive

enough to adequately contain the offender. In such cases, regression to a higher level of supervision should be considered.

B. Polygraphs

Reduced Supervision: The offender must complete at least two consecutive non-deceptive polygraph examinations before moving to the next lower level of supervision. The examinations must be the two most recent exams each time.

Discharge: The offender must have completed a non-deceptive baseline (sex history) polygraph examination and complete at least two consecutive non-deceptive polygraph examinations for each of the three levels of supervision before discharge.

Any exception made to the requirements for movement from level to level or for discharge must be made by a consensus of the community supervision team. In such a case, reasons for movement when criteria are not met must be documented as well as any resulting potential risk to the community.

C. Progress in Treatment

Reduced Supervision: The sex offender's monthly reports are consistently indicating the following (consistency is defined as 6 months or longer):

- Regular attendance with no un-excused absences in the last 6 months.
- Active participation.
- Progression with the established treatment guidelines.
- Payment.
- The offender acknowledges and takes full responsibility for crime of conviction.
- Completion of a non-deceptive polygraph regarding the offender's sex history.
- The treatment provider reports that any other denial issues are being consistently and adequately addressed in treatment.
- The offender understands the offense cycle.
- The offender has and is utilizing an appropriate relapse prevention plan.
- No unsuccessful terminations.
- Full compliance with established treatment guidelines.
- Full compliance with recommended medications.

Discharge: For discharge from parole, the treatment provider must be reporting successful termination of treatment or successful progress in treatment to date and actively recommending discharge from parole. (Successful completion indicates active, consistent practice of a treatment aftercare program. Successful progress indicates an active plan to continue in treatment.)

D. Employment

Immediately upon release, providing there are no medical, mental or physical problems, the sex offender shall actively seek appropriate full-time employment or enroll in an appropriate vocational training program, with consent of supervising officer. Appropriate employment limits contact with victims and potential victims and allows the supervising officer to consistently locate the offender.

Reduced Supervision: The offender must demonstrate of job stability, longevity and appropriate usage. In addition, a positive evaluation or progress report (written or verbal) is required from the immediate work supervisor.

An exception may be made if the sex offender becomes unemployed for reasons beyond his or her control. Any exception must be agreed to by a consensus of the community supervision team. In such a case, reasons for movement when criteria are not met must be documented as well as any resulting potential risk to the community.

Discharge: The sex offender's employment record shall reflect the ability to seek and maintain appropriate long-term employment with no periods of willful unemployment during the past 5 years.

E. Relationships

Relationships developed in the community shall be appropriate and of positive benefit to the sex offender. The safety of the community shall be considered a priority in all relationships. Appropriate relationships limit contact with all victims and potential victims and include an awareness of the offender's criminal history.

Reduced Supervision: Consideration for progression to a lower level of supervision will be based on the sex offender's ability to articulate the status and benefits of any relationships. The offender shall have had no unauthorized contact with victims or minors in the last 6 months.

Consideration for progression to level 2 (medium) will be based on the offender identifying an appropriate community support person who is willing to participate in offense-specific education.

In a situation where the offender cohabits with or is in an intimate relationship, the co-habitor or significant other must be supportive of treatment, not supportive of the offenders' denial, and be willing to participate in treatment and sex offense-specific education as needed. Significant other(s) and co-habitors, should also be able to articulate the status and benefits of relationship, demonstrate an awareness of the sex offender's criminal history including the current offense and

have knowledge and awareness of the sex offender's risk to children and potential victims.

Exceptions may be made and documented when the offender is residing in a residential facility or hospital and it would be inappropriate to disclose the offender's history to all other residents. In such cases, the safety of the other residents shall be the determining factor regarding disclosure, not the offender's desire for confidentiality. In no case is it appropriate to keep any information regarding the offender and his or her history from staff of any facility in which they are being treated or in which they reside.

Discharge: The sex offender shall have demonstrated, over the course of supervision, the ability to maintain age appropriate, professional and personal relationships that are non-criminal. The sex offender shall demonstrate an understanding of how positive relationships in the community have influenced non-criminal behavior and thinking.

F. Sex Offender Registration

Each sex offender, domestic or interstate, if required by statute to register, shall upon becoming a temporary or permanent resident, register with the law enforcement agency within the jurisdiction where the offender's residence is located.

Reduced Supervision: Consideration for progression to a lower level of supervision will be based on consistent compliance with re-registration requirements, advising law enforcement of current residence, appropriately notifying original jurisdiction and timely filing of a change of residency card with law enforcement when moving to a new jurisdiction.

Progression to a lower level of supervision will not be considered if sex offender is not in compliance with state registration laws.

Discharge: The sex offender must currently be registered and have been in compliance with sex offender registration laws for the (5) five consecutive years immediately preceding consideration for discharge.

G. Leisure Activities:

Immediately upon release, leisure activities engaged in or developed within the community shall be appropriate, legitimate, legal and of benefit to the sex offender. Appropriate leisure activities limit contact with victims and potential victims and allow the supervising officer to consistently locate the offender.

Reduced Supervision: Consideration for progression to a lower level of supervision will be based on sex offenders' ability to identify appropriate leisure activities and the benefit of each activity. In addition, the offender must be able to articulate how the relapse prevention plan is used when engaging in leisure activities.

Discharge: To be considered for discharge, the sex offender must have demonstrated the ability to participate in appropriate, legitimate and legal leisure activities from which he/she has benefited. In addition, the offender must have demonstrated consistent use of a relapse prevention plan as needed during leisure activities.

H. Compliance with Conditions of Supervision

On a regular basis, the sex offender demonstrates compliance with all conditions of supervision.

Reduced Supervision: Consideration for progression to a lower level of supervision will be based on the sex offender's attitude, progress, participation and consistent compliance with all conditions of supervision.

The sex offender will not be considered for progression to a lower level of supervision if not actively in compliance with all offense-specific conditions of supervision, or if the offender has a pending summons or complaint for any parole violation(s).

Discharge: To be considered for discharge sex offender must be in compliance with all conditions of supervision including successful discharge from treatment and active participation in an aftercare program.

LS 3.000: Criteria for Reduction in Level of Supervision While on Probation and Discharge from Probation

.....

3.010 In order to demonstrate that the sex offender would not pose an undue threat to the community if placed on a lower level of supervision while on probation, he or she must meet the reduction in supervision criteria in each of the following areas of focus (For the purpose of these Criteria, reduction in level of supervision while on probation means movement from Sex Offender Intensive Supervision Probation to Regular Probation). For criteria that refer to reduction in levels of supervision while on Sex Offender Intensive Supervision Probation, please refer to the *Sex Offender Intensive Supervision (SOISP) Guidelines and Standards* published by the Colorado Judicial Branch, Office of Probation Services.

In order to demonstrate that the sex offender would not pose an undue threat to the community if discharged from probation, he or she must meet the discharge criteria in each of the following areas of focus:

A. Compliance with the Treatment Contract to the Treatment Provider's Satisfaction

Reduced Supervision: The treatment provider is indicating a recommendation for reduced supervision based on the following indicators of progress in treatment:

- Regular attendance and active participation in sex offense-specific treatment.
- Demonstrates increased internal motivation for treatment.
- The offender admits to committing the offense and acknowledges sexual assault intent.
- The offender demonstrates understanding and use of a written offense cycle.
- Completion of a written relapse prevention plan and demonstrated ability to use it.
- The offender appropriately confronts others in group treatment.
- Completion of non-deceptive maintenance polygraph examinations at least every 6 months.
- Completion of all homework assignments and evidence of an attempt to do a quality job.
- No violations of the treatment contract.
- A reduction in attempts to split team members.

- Demonstrates increased awareness of victim impact and the development of victim empathy.
- Verification that the offender is using techniques, such as covert sensitization, to interrupt illegal, abusive and harmful arousal.
- Non-deceptive disclosure polygraph. (Any exception to this criterion must be consistent with the requirements in the *SOMB Standards and Guidelines* located in the front section of this publication.)
- Demonstrates ability to recognize and correct thinking errors.
- Demonstrated the ability to express anger appropriately and without aggression.
- Full and consistent compliance with any medication requirements.

Discharge: For discharge from probation, the treatment provider must be reporting successful termination of treatment or successful progress in treatment to date and actively recommending discharge from probation. (Successful completion indicates active, consistent practice of a treatment aftercare program. Successful progress indicates an active plan to continue in treatment.)

B. Consistency Between Words and Behavior

Reduced Supervision:

- The offender can identify inconsistencies in his or her words and behavior and makes attempts to correct them.
- Evidence of consistency in what is said to the members of the community supervision team.

Discharge: The offender consistently displays consistency between his or her words and behavior in all areas of his life.

C. Appropriate Relationships and Community Support

Reduced Supervision: The offender recognizes and terminates inappropriate relationships. The offender has establishment of some appropriate social relationships and community support. This may include a community chaperone if deemed necessary by the community supervision team. In a situation where the offender cohabits with or is in an intimate relationship, the co-habitor or significant other must be supportive of treatment, not supportive of the offenders' denial, and be willing to participate in treatment and sex offense-specific education as needed. Significant other(s) and cohabiters should also be able to articulate the status and benefits of relationship demonstrate an awareness of the sex offender's

criminal history including the current offense and have knowledge and awareness of the sex offender's risk to children and potential victims.

Exceptions may be made and documented when the offender is residing in a residential facility or hospital and it would be inappropriate to disclose the offender's history to all other residents. In such cases, the safety of the other residents shall be the determining factor regarding disclosure, not the offender's desire for confidentiality. In no case is it appropriate to keep any information regarding the offender and his or her history from staff of any facility in which they are being treated or in which they reside.

Discharge: The sex offender shall have demonstrated, over the course of supervision, the ability to maintain age appropriate, professional and personal relationships that are non-criminal. The sex offender shall demonstrate an understanding of how positive relationships in the community have influenced non-criminal behavior and thinking.

D. Stable and Safe Residence

Reduced Supervision: The offender shall maintain a stable and safe residence. A safe residence is one that limits the offender's contact with victims, potential victims and minors and where any co-habitators are aware of the offender's criminal history including the current offense and have knowledge and awareness of the sex offender's risk to children and potential victims.

Discharge: The offender shall have demonstrated, over the course of supervision the ability to maintain a stable and safe residence.

E. Stable and Safe Employment

Reduced Supervision: The offender shall demonstrate the ability to maintain stable and safe employment. Safe employment limits contact with victims and potential victims and allows the supervising officer to consistently locate the offender.

Discharge: The offender's employment record shall reflect the ability to maintain stable and safe employment with no periods of willful unemployment during the past 5 years.

F. Substance Abuse Treatment

These criteria apply only to those offenders who are recommended for substance abuse treatment.

Reduced Supervision: The offender has entered into a recommended substance abuse treatment program and is making and maintaining consistent progress in the program.

The offender has not used drugs or alcohol for at least 6 months prior to any reduction in level of supervision.

Discharge: The offender has completed any recommended substance abuse program and is actively and consistently involved in any recommended aftercare or maintenance programs.

G. Leisure Activities

Leisure activities engaged in or developed within the community shall be appropriate, legitimate, legal and of benefit to the sex offender. Appropriate leisure activities limit contact with victims and potential victims and allow the supervising officer to consistently locate the offender.

Reduced Supervision: Consideration for progression to a lower level of supervision will be based on sex offenders' ability to identify appropriate leisure activities and the benefit of each activity. In addition, the offender must be able to articulate how the relapse prevention plan is used when engaging in leisure activities.

Discharge: To be considered for discharge, the sex offender must have demonstrated the ability to participate in appropriate, legitimate and legal leisure activities from which he has benefited. In addition, the offender must have demonstrated consistent use of a relapse prevention plan as needed during leisure activities

H. Compliance with Conditions of Supervision

Reduced Supervision: Consideration for progression to a lower level of supervision will be based on the sex offender's attitude, progress, participation and consistent compliance with all conditions of supervision including but not limited to the following:

- Keeps probation and other related appointments and is generally on time.
- Is open to discussing the offense and treatment progress.

- The offender does not try to control the probation officer or content of visits.
- No technical violations within the last 6 months of probation related to the offense cycle.
- No alcohol or drug use at least 6 months preceding a supervision reduction.
- No unauthorized contact with the victim(s) or with minors.
- Full compliance with requirements for registration and DNA Genetic Marker collection.
- Consistent payment of restitution and fines imposed by the court.
- Any community complaints regarding the offender have been adequately addressed to the treatment team's satisfaction.

I. Community Supervision Team Staffing

Reduced Supervision: The team considers all information above and other appropriate information to make any determination regarding movement to a lower level of supervision. All team members must agree to the reduction in the level of supervision.

Discharge: In any case when an offender is being considered for recommendation of discharge from lifetime supervision, the offender must demonstrate that he or she would not pose an undue threat to the community if allowed to live in the community without supervision. The team considers all information below and other appropriate information to make any determination regarding discharge from lifetime supervision. All team members must agree to the discharge from supervision.

The supervising officer will document what criteria are met or not met at any consideration of reduction in level of supervision or discharge and the decision of the community supervision team.

Discussion: If an offender is consistently failing to meet criteria for progression, the team should evaluate whether the current level of supervision is intensive enough to adequately contain the offender. In such cases, regression to a higher level of supervision, or revocation, should be considered.

LS 4.000: Criteria for Successful Progress in Treatment in Prison: Sex Offender Treatment and Monitoring Program, Colorado Department of Corrections (CDOC)

4.100 Criteria for Successful Progress in Sex offense-specific Treatment

4.110 In order to demonstrate successful progress in treatment, the offender must meet the progress criteria in each of the following areas of focus; in order to meet the criteria for successful completion of treatment, the offender must meet all of the progress and completion criteria in each of the following areas of focus.

For the purposes of these criteria, successful progress in treatment indicates an active plan to continue treatment and supervision; successful completion of treatment indicates active, consistent participation in a treatment aftercare program, containment and monitoring to manage lifelong risk.

A. Relapse Prevention Criteria

1. Reduction in Denial

Progress:

- The offender discloses all victim(s) and sexual offending behavior in detail.
- The offender's account must reasonably match or surpass the victim(s) accounts.
- The offender recognizes and admits the purposes of their sexually assaultive/offending behavior including sexual gratification, illegal, abusive or harmful sexual arousal and power and control.
- The offender completes non-deceptive polygraph examination(s) regarding sexual history.

Completion:

- The offender has met all progress criteria and continues to complete non-deceptive polygraph examinations.

- The offender no longer uses denial of responsibility in any arena of his or her life as a primary coping mechanism.
2. Decreased illegal, abusive or harmful sexual urges, arousal, and fantasies:

Progress:

- The offender demonstrates knowledge of his or her historical offense and relapse cycles including awareness of thoughts, emotions and behaviors that could facilitate sexual re-offenses or other assaultive behaviors.
- The offender demonstrates knowledge of his or her cognitive distortions and is working to correct them.
- The offender has developed and implemented a plan to alter his or her lifestyle to limit their ability to plan or groom potential victims and has developed skills to interrupt fantasies and inappropriate masturbatory behaviors and utilizes them.
- The offender has developed a comprehensive relapse prevention plan.
- Is, and consistently has been, in compliance with all recommended prescribed psychiatric medications used to reduce arousal or manage behaviors related to risk.
- The offender can identify objectification and inappropriate sexual gratification in relationships and is developing skills to address them.

Completion:

- The offender demonstrates control over arousal or interest through Plethysmograph or Abel Screen Δimprovement@.
- The offender consistently completes non-deceptive polygraphs regarding planning behavior or masturbation to arousal and fantasies.
- The offender consistently demonstrates self-motivated use of the relapse prevention plan and has distributed written copies of the plan to any co-habitators or significant others.
- The offender consistently demonstrates self-motivated use of a plan for identifying and correcting cognitive distortions.
- The offender demonstrates the development and maintenance of appropriate adult relationships. Appropriate relationships value the quality of the relationship over sexual gratification.
- The offender demonstrates an ongoing commitment to and active engagement in treatment or an aftercare treatment program, containment and monitoring to manage lifelong risk.

Discussion: Demonstrating improvement on these measures does not necessarily indicate reduced risk or that the offender will utilize his or her ability to control arousal or interest appropriately.

B. Environment Management Criteria

Progress:

- The offender demonstrates willing, active and knowledgeable participation in the treatment process and/or a milieu or residential treatment setting.
- The offender demonstrates the ability to identify anti-social behaviors and is working toward pro-social skills to replace them.
- The offender has disengaged from relationships that support his or her denial, minimization, and resistance to treatment.
- The offender is engaged in relationships which are supportive of treatment, and the people engaged in relationships with the offender demonstrate awareness of the sex offender's criminal history including the current offense and of the sex offender's risk to children and potential victims. These people actively assist in limiting the offender's contact with children and potential victims. Additionally, those who are in either in intimate relationships with the offender or are co-habiting with the offender are willing to participate in treatment and sex offense-specific education as needed.
- The offender's support system has been given permission by the offender to question and confront the offender about his or her behavior and to report their concerns to the community supervision team and law enforcement authorities when appropriate.
- The offender has demonstrated consistent and full compliance with all conditions of supervision and the treatment contract.
- The offender has demonstrated consistent ability to avoid high risk environments.

Completion:

- The offender demonstrates willing and active participation in only pro-social behaviors.

C. Community & Victim Responsiveness Criteria

Progress:

- The offender acknowledges the full impact of his or her sexually assaultive and offending behavior.
- The offender understands that the protection of victims and potential victims from unsafe and or unwanted contact with the offender outweighs the needs or desires of the offender.
- The offender changes his or her behavior to prevent unsafe or unwanted contact with victims or potential victims.
- The offender has started to pay restitution and has a realistic plan to continue.
- The offender has demonstrated consistent compliance with all registration, notification, HIV testing and DNA testing requirements and has an active plan to continue.

Completion:

- The offender has successfully completed victim clarification with his or her victims and secondary victims or victim surrogates when victim needs or desires indicate non- participation.
- The offender demonstrates the capacity, knowledge, willingness and ability to empathize.

Discussion: It should be noted that it can be dangerous to attempt empathy work with those offenders who may not have the capacity to develop real empathy (such as psychopaths and sadists). These offenders may utilize information about others= pain as a means to learn how to harm victims more effectively.

D. Offender Criteria

Progress:

- The offender recognizes and acknowledges his or her lifelong risk.
- The offender does not project blame for his or her offending behavior.
- The offender does not present himself or herself as entitled or as a victim.
- The offender has identified cognitive distortions and has demonstrated a consistent ability to change them.
- The offender has been able to demonstrate a primarily positive attitude toward supervision and treatment.
- The offender has identified problems with stress management, social skills and anger management and is developing pro social skills to address them.
- The offender can identify his or her unhealthy attitudes and behavior regarding sex roles and sexuality and is working to change them.
- The offender can identify his or her misuse of power and control and is working to eliminate it.

Completion:

- The offender consistently maintains a positive attitude toward supervision and treatment.
- The offender is committed to permanently altering his or her lifestyle to reduce and control his or her lifelong risk.
- The offender does not project blame or minimize personal responsibility.
- The offender assumes full and appropriate responsibility for his or her actions.
- The offender demonstrates primarily non-distorted thinking.
- The offender has accepted and is actively and consistently working to address any diagnosed personality disorders.

- The offender has addressed in treatment and demonstrated the ability to practice ongoing self-care regarding: 1) previous trauma, 2) social skills, 3) stress management, 4) anger management, and 5) independent living skills.
- The offender has consistently demonstrated realistic and healthy attitudes and behavior about sexuality and sex roles.
- The offender has addressed power and control issues in treatment and has consistently demonstrated an ability to engage with others without abusing power and control.
- The offender has willingly engaged in risk assessment and physiological monitoring and has an active plan to continue.
- The offender has developed a positive life purpose which is internally oriented, value driven and not outcome dependent.

E. Co-morbidity and Adjunctive Issues

Progress:

- The offender is addressing any domestic violence history with appropriate domestic violence treatment and has not engaged in domestic violence.
- The offender is addressing drug and alcohol problems in treatment and is maintaining abstinence of recommended.
- The offender is addressing any psychiatric conditions in treatment and is in compliance with all recommended medications.

Completion:

- The offender has not committed any new incidents of domestic violence, has addressed domestic violence in treatment and demonstrates a commitment to continue domestic violence treatment as needed.
- The offender demonstrates an ongoing commitment to participate in recommended substance abuse treatment and maintenance programs.
- The offender has addressed any psychiatric conditions in treatment and demonstrates an ongoing commitment to participate in recommended treatment, maintenance and medication programs.

4.210 Sex offender treatment in the prison setting is preliminary to continued treatment and supervision in the community post release from prison. Since sex offenders who participate in treatment in the prison setting cannot complete treatment in prison, the Sex Offender Treatment and Monitoring Program has developed criteria for offenders to receive a recommendation for release to parole. In accordance with the Risk, Need, Responsivity Model the SOTMP has developed two risk based criteria formats. Sex offenders participating in the Sex Offender Treatment and Monitoring Program (SOTMP) must meet all of the following criteria to receive a recommendation for release to parole from the SOTMP staff.

A. Low to Low-Moderate Risk Category

1. Participates and actively engages in recommended level of sex offense-specific treatment.
 2. Complete a disclosure of his or her offense related sexual history relevant to identified risk areas as verified through either the sexual history polygraph²⁴⁵ process, or other clinical indicators²⁴⁶.
 3. Client will develop a plan to manage ongoing risk factors and treatment needs specific to recommended level of treatment.
 4. Client will present an approved risk management plan through SOTMP disclosure session.
 5. Demonstrate management of identified risk areas as verified by clinical indicators.²⁴⁷
 6. Must be compliant with any CDOC psychiatric recommendations for medication which may enhance his or her ability to benefit from sex offense-specific treatment.
 7. Client does not display attitudes, behaviors or risk factors that present an undue risk to the community. Examples may include, but are not limited to, high degrees of traits associated with psychopathy, sadism, and static and dynamic factors or responsivity needs elevated to an unmanageable level.
- B. Moderate to Moderate High to High Risk Category
1. Participates and actively engages in recommended level of sex offense-specific treatment as evidenced by a measured reduction in dynamic risk.
 2. Complete a disclosure of his or her offense related sexual history relevant to identified risk areas as verified through either the sexual history polygraph²⁴⁸ process, or other clinical indicators.²⁴⁹
 3. Complete a comprehensive, written plan to manage ongoing risk areas and treatment needs. The plan must be approved by the SOTMP team.

²⁴⁵ Polygraph examination results will not be used in isolation to exclude someone from meeting criteria without additional evidence that indicates high risk behaviors.

²⁴⁶ Clinical indicators can be anything that provides information about a client's overall clinical presentation, which may include but is not limited to interviews, quality of treatment participating, polygraph examination results, scores on dynamic risk assessments, psychological evaluation, behavioral observations, and collateral reports.

²⁴⁷ Clinical indicators can be anything that provides information about a client's overall clinical presentation, which may include but is not limited to interviews, quality of treatment participating, polygraph examination results, scores on dynamic risk assessments, psychological evaluation, behavioral observations, and collateral reports. Polygraph examination results will not be used in isolation to exclude someone from successful completion without additional evidence that indicates high risk behaviors.

²⁴⁸ Polygraph examination results will not be used in isolation to exclude someone from meeting criteria without additional evidence that indicates high risk behaviors.

^{249, 221} Clinical indicators can be anything that provides information about a client's overall clinical presentation, which may include but is not limited to interviews, quality of treatment participating, polygraph examination results, scores on dynamic risk assessments, psychological evaluation, behavioral observations, and collateral reports.

4. Have an approved support person or system who has participated in SOTMP Family Support Education. The support person/system will receive an approved copy of the client's written plan to manage on-going risk areas and treatment needs through their participation in an SOTMP therapist facilitated disclosure session.
 5. Demonstrate management of identified risk areas as verified by clinical indicators.²⁵⁰
 6. Must be compliant with any CDOC psychiatric recommendations for medication which may enhance his or her ability to benefit from sex offense-specific treatment.
8. Client does not display attitudes, behaviors or risk factors that present an undue risk to the community. Examples may include, but are not limited to, high degrees of traits associated with psychopathy, sadism and dynamic factors or responsivity needs elevated to an unmanageable level.

²⁵⁰ Clinical indicators can be anything that provides information about a client's overall clinical presentation, which may include but is not limited to interviews, quality of treatment participating, polygraph examination results, scores on dynamic risk assessments, psychological evaluation, behavioral observations, and collateral reports. Polygraph examination results will not be used in isolation to exclude someone from successful completion without additional evidence that indicates high risk behaviors.
